

CC2340R SimpleLink™ Family of 2.4GHz Wireless MCUs

1 Features

Wireless microcontroller

- Optimized 48MHz Arm® Cortex®-M0+ processor
- Up to 512KB of in-system programmable flash
- 12KB of ROM for bootloader and drivers
- Up to 64KB of ultra-low leakage SRAM. Full RAM retention in standby mode
- 2.4GHz RF transceiver compatible with Bluetooth® Low Energy and IEEE 802.15.4 PHY and MAC
- Integrated balun
- Supports over-the-air upgrade (OTA)
- Serial wire debug (SWD)

Low power consumption

- MCU consumption:
 - 2.6mA active mode, CoreMark[®]
 - 53µA/MHz running CoreMark[®]
 - < 710nA standby mode on CC2340R52
 - 165nA shutdown mode, wake-up on pin
- Radio consumption:
 - 5.3mA RX
 - 5.1mA TX at 0dBm
 - < 11.0mA TX at +8dBm</p>

Wireless protocol support

- Bluetooth® LE
 - Features: LE 2M, LE Coded, Periodic Advertising, Extended Advertising, LE Secure Connections
 - Qualified against Bluetooth Core 5.4
- **Zigbee®**
- **Thread**
- Proprietary systems

High-performance radio

- -102dBm sensitivity for Bluetooth® LE Coded
- -96.5dBm sensitivity for Bluetooth® LE 1Mbps
- -98dBm sensitivity for IEEE 802.15.4 (2.4GHz)
- Output power up to +8dBm with temperature compensation

Regulatory compliance

- Suitable for systems targeting compliance with these standards:
 - EN 300 328 (Europe)
 - FCC CFR47 Part 15
 - ARIB STD-T66 (Japan)

MCU peripherals

- Up to 26 I/O pads
 - Two IO pads SWD, muxed with GPIOs
 - Two IO pads LFXT, muxed with GPIOs
 - Up to 22 DIOs (analog or digital IOs)
- Up to 3 × 16-bit and 1× 24-bit general-purpose timers with quadrature decode mode and IR generation mode
- 12-bit ADC, 1.2Msps with external reference, 267ksps with internal reference, up to 12 external ADC inputs
- 1× low power comparator
- 1× UART
- 1× SPI
- 1× I²C
- Real-time clock (RTC)
- Integrated temperature and battery monitor
- Watchdog timer

Security enablers

- AES 128-bit cryptographic accelerator
- Random number generator from on-chip analog noise

Development tools and software

- LP-EM-CC2340R53 LaunchPad Development Kit
- SimpleLink™ Low Power F3 software development kit
- SmartRF™ Studio for simple radio configuration
- SysConfig system configuration tool

Operating range

- On-chip buck DC/DC converter
- 1.71V to 3.8V single supply voltage
- T_i : -40°C up to +125°C

RoHS-compliant package

- 5mm × 5mm RKP QFN40
- 4mm × 4mm RGE QFN24
- 2.2mm × 2.6mm YBG WCSP

2 Applications

- Medical
 - Home healthcare—blood glucose monitors, blood pressure monitors, CPAP machines, electronic thermometers
 - Patient monitoring and diagnostics—medical sensor patches
 - Personal care and fitness—electric toothbrush, wearable fitness and activity monitor
- Building automation
 - Building security systems—motion detector, electronic smart lock, door and window sensor, garage door system, gateway
 - HVAC—thermostat, wireless environmental sensor
 - Fire safety system—smoke and heat detector
 - Video surveillance—IP network camera
- Lighting
 - LED luminaire
 - Lighting control—daylight sensor, lighting sensor, wireless control
- · Factory automation and control

- Retail automation and payment—electronic point of sale
 - Electronic shelf label
- Grid infrastructure
 - Smart meters—water meter, gas meter, electricity meter, and heat cost allocators
 - Grid communications—wireless communications—Long-range sensor applications
 - Other alternative energy—energy harvesting
- · Communication equipment
 - Wired networking
 - wireless LAN or Wi-Fi access points, edge router
- Personal electronics
 - Connected peripherals—consumer wireless module, pointing devices, keyboards, and keypads
 - Gaming—electronic and robotic toys
 - Wearables (non-medical)—smart trackers, smart clothing

3 Description

The CC2340R SimpleLink™ family of devices are 2.4GHz wireless microcontrollers (MCUs), targeting Bluetooth® Low Energy, Zigbee, Thread, and Proprietary 2.4GHz applications. These devices are optimized for low-power wireless communication with Over the Air Download (OAD) support in Building automation (wireless sensors, lighting control, beacons), asset tracking, medical, retail EPOS (electronic point of sale), ESL (electronic shelf), and Personal electronics (toys, HID, stylus pens) markets. Highlighted features of this device include:

- Support for Bluetooth 5 features: high-speed mode (2Mbps PHY), long-range (LE Coded 125kbps and 500kbps PHYs), privacy 1.2.1 and channel selection algorithm #2, as well as backward compatibility and support for key features from the earlier Bluetooth LE specifications.
- Fully qualified Bluetooth software protocol stack included with the SimpleLink™ Low Power F3 software development kit (SDK)
- Zigbee® protocol stack support in the SimpleLink™ Low Power F3 software development kit (SDK)
- Thread protocol stack support in SIMPLELINK TI OPENTHREAD SDK
- Ultra-low standby current less than 0.71µA with RTC operational and full RAM retention that enables significant battery life extension, especially for applications with longer sleep intervals.
- Integrated balun for reduced bill-of-material (BOM) board layout
- Excellent radio sensitivity and robustness (selectivity and blocking) performance for Bluetooth Low Energy (–102dBm for 125kbps LE Coded PHY, with integrated balun)

The CC2340R family is part of the SimpleLink™ MCU platform, which consists of Wi-Fi®, Bluetooth Low Energy, Thread, Zigbee, Sub1GHz MCUs, and host MCUs that all share a common, easy-to-use development environment with a single-core software development kit (SDK) and rich tool set. A one-time integration of the SimpleLink™ platform enables you to add any combination of the portfolio's devices into your design, allowing 100-percent code reuse when your design requirements change. For more information, visit the SimpleLink™ MCU platform.

6 Pin Configurations and Functions

6.1 Pin Diagrams

6.1.1 Pin Diagram—RKP Package (Top View)

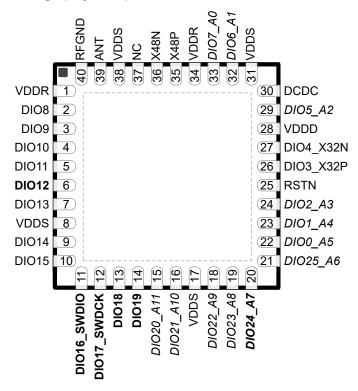

Figure 6-1. RKP (5mm × 5mm) Pinout, 0.4mm Pitch (Top View)

The following I/O pins marked in Figure 6-1 in **bold** have high-drive capabilities:

- Pin 6, DIO12
- Pin 11, DIO16 SWDIO
- Pin 12, DIO17_SWDCK
- Pin 13, DIO18
- Pin 14, DIO19
- Pin 20, DIO24_A7

The following I/O pins marked in Figure 6-1 in *italics* have analog capabilities:

- Pin 15, DIO20_A11
- Pin 16, DIO21_A10
- Pin 18, DIO22_A9
- Pin 19, DIO23_A8
- Pin 20, DIO24 A7
- Pin 21, DIO25_A6
- Pin 22, DIO0 A5
- Pin 23, DIO1_A4
- Pin 24, DIO2_A3Pin 29, DIO5 A2
- Pin 32, DIO6, A1
- Pin 33, DIO7_A0

6.1.2 Pin Diagram—RGE Package (Top View)

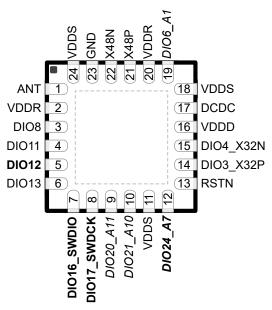

Figure 6-2. RGE (4mm × 4mm) Pinout, 0.5mm Pitch (Top View)

The following I/O pins marked in Figure 6-2 in **bold** have high-drive capabilities:

- Pin 5, DIO12
- Pin 7, DIO16_SWDIO
- Pin 8, DIO17_SWDCK
- Pin 12, DIO24 A7

The following I/O pins marked in Figure 6-2 in *italics* have analog capabilities:

- Pin 9, DIO20 A11
- Pin 10, DIO21_A10
- Pin 12, DIO24_A7
- Pin 19, DIO6 A1

6.1.3 Pin Diagram—YBG Package (Top View)

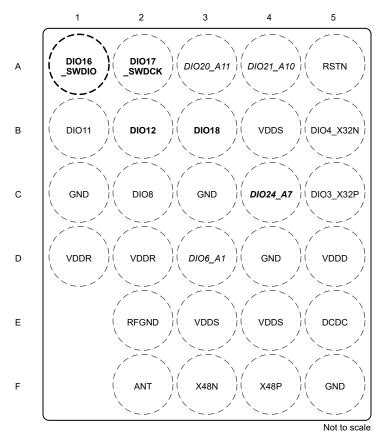

Figure 6-3. YBG (2.2mm × 2.6mm) Pinout, 0.4mm Pitch (Top View)

The following I/O pins marked in Figure 6-2 in **bold** have high-drive capabilities:

- Pin B2, DIO12
- Pin A1, DIO16_SWDIO
- Pin A2, DIO17_SWDCK
- Pin B3, DIO18
- Pin C4, DIO24_A7

The following I/O pins marked in Figure 6-2 in *italics* have analog capabilities:

- Pin A3, DIO20_A11
- Pin A4, DIO21_A10
- Pin C4, DIO24_A7
- Pin D3, DIO6 A1

6.2 Signal Descriptions

Table 6-2. Analog Input Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|--|---------|---------|---------|
| ANA0 | ANAL OG | ADC reference (negative terminal) or ADC channel 0 input ⁽¹⁾ | 33 | | |
| ANA1 | ANAL OG | ADC reference (positive terminal) or ADC channel 1 input | 32 | 19 | D3 |
| ANA2 | ANAL OG | ADC channel 2 input | 29 | | |
| ANA3 | ANAL OG | ADC channel 3 input | 24 | | |
| ANA4 | ANAL OG | ADC channel 4 input | 23 | | |
| ANA5 | ANAL OG | ADC channel 5 input | 22 | | |
| ANA6 | ANAL OG | ADC channel 6 input | 21 | | |
| ANA7 | ANAL OG | Low power comparator input (positive terminal) / ADC channel 7 input | 20 | 12 | C4 |
| ANA8 | ANAL OG | Low power comparator input (positive or negative terminal) / ADC channel 8 input | 19 | | |
| ANA9 | ANAL OG | ADC channel 9 input | 18 | | |
| ANA10 | ANAL OG | Low power comparator input (positive terminal) / ADC channel 10 input | 16 | 10 | A4 |
| ANA11 | ANAL OG | ADC channel 11 input | 15 | 9 | A3 |

⁽¹⁾ ADC VREF- (external reference negative terminal) is connected directly to ground in the RGE package. ADC VREF- is not connected in the WCSP (YBG) package so external reference is not available with the YBG package.

Table 6-3. Clock Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|--|---------|---------|---------|
| CKMIN | I/O | HFOSC tracking loop input | 10 | | |
| LFCI | I/O | Low frequency clock input (LFXT bypass clock from pin) | 26 | 14 | C5 |
| LFXT_N | I/O | 32kHz crystal oscillator pin 2 | 27 | 15 | B5 |
| LFXT_P | I/O | 32kHz crystal oscillator pin 1 | 26 | 14 | C5 |
| X48N | I/O | 48MHz crystal oscillator pin 2 | 36 | 22 | F3 |
| X48P | I/O | 48MHz crystal oscillator pin 1 | 35 | 21 | F4 |

Table 6-4. DTB Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|---------------------------|---------|---------|---------|
| DTB0 | I/O | Digital test bus output 0 | 14 | | |
| DTB1 | I/O | Digital test bus output 1 | 18 | | |
| DTB2 | I/O | Digital test bus output 2 | 23 | | |
| DTB3 | I/O | Digital test bus output 3 | 2 | 3 | C2 |
| DTB4 | I/O | Digital test bus output 4 | 7 | 6 | |
| DTB5 | I/O | Digital test bus output 5 | 20 | 12 | C4 |
| DTB6 | I/O | Digital test bus output6 | 32 | 19 | D3 |

Table 6-10. Device Power

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN | |
|-------------|-------------|--|---------------|------------|------------|--|
| DCDC (1) | PWR | Switch node of the internal DC/DC converter | 30 | 17 | E5 | |
| VDDD (1) | PWR | Internal 1.28V regulator decoupling capacitor | 28 | 16 | D5 | |
| VDDR | PWR | Internal supply, must be powered from the internal DC/DC converter or the internal LDO | 1, 34 | 2, 20 | D1, D2 | |
| VDDS | PWR | 1.71V to 3.8V supply | 17, 31, 38, 8 | 11, 18, 24 | B4, E3, E4 | |

(1) Do not supply external circuitry from this pin.

Table 6-11. Reset Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|---------------------------------------|---------|---------|---------|
| RSTN | I/O | Global main device reset (active low) | 25 | 13 | A5 |

Table 6-12. Radio Digital Output Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|-----------------------------|---------|---------|---------|
| LRFD0 | I/O | Radio Core Output 0 | 26, 5 | 14, 4 | B1, C5 |
| LRFD1 | I/O | Radio Core Output 1 | 16, 27 | 10, 15 | A4, B5 |
| LRFD2 | I/O | Radio Core Output 2 | 32 | 19 | D3 |
| LRFD3 | I/O | Radio Core Digital Output 3 | 3 | | |
| LRFD4 | I/O | Radio Core Output 4 | 33 | | |
| LRFD5 | I/O | Radio Core Output 5 | 9 | | |
| LRFD6 | I/O | Radio Core Output 6 | 29 | | |
| LRFD7 | I/O | Radio Core Output 7 | 23 | | |

Table 6-13. RF Port

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|---------------|---------|---------|---------|
| ANT | RF | 50Ohm RF port | 39 | 1 | F2 |

Table 6-14. SPI Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|----------------------------------|------------------------|----------------|----------------|
| SPI0CSN | I/O | SPI chip select | 22, 32, 5 | 19, 4 | B1, D3 |
| SPI0PICO | I/O | SPI peripheral in controller out | 11, 14, 27, 6, 7 | 15, 5, 6, 7 | A1, B2, B5 |
| SPI0POCI | I/O | SPI peripheral out controller in | 15, 16, 21, 5, 6, 7 | 10, 4, 5, 6, 9 | A3, A4, B1, B2 |
| SPI0SCLK | I/O | SPI clock | 12, 13, 2, 20 | 12, 3, 8 | A2, B3, C2, C4 |

Table 6-15. Timers Capture or Compare Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|--|----------------|-----------|------------|
| T0C0 | I/O | Capture or compare 0 from timer 0 | 5 | 4 | B1 |
| T0C1 | I/O | Capture or compare 1 from timer 0 | 16 | 10 | A4 |
| T0C2 | I/O | Capture or compare 2 from timer 0 | 12, 27 | 15, 8 | A2, B5 |
| T1C0 | I/O | Capture or compare 0 from timer 1 | 15, 20 | 12, 9 | A3, C4 |
| T1C1 | I/O | Capture or compare 1 from timer 1 | 6 | 5 | B2 |
| T1C2 | I/O | Capture or compare 2 from timer 1 | 11, 26, 32 | 14, 19, 7 | A1, C5, D3 |
| T2C0 | I/O | Capture or compare output 0 from timer 2 | 18 | | |
| T2C1 | I/O | Capture or compare 1 from timer 2 | 19 | | |
| T2C2 | I/O | Capture or compare 2 from timer 2 | 29 | | |
| T3C0 (1) | I/O | Capture or compare 0 from timer 3 | 13, 20, 3 | 12 | B3, C4 |
| T3C1 (1) | I/O | Capture or compare 1 from timer 3 | 14, 23, 26, 33 | 14 | C5 |
| T3C2 | I/O | Capture or compare 2 from timer 3 | 22, 9 | | |

(1) Timer 3 not available on CC2340R21.

Table 6-16. Timers Complementary Output Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|--|---------|---------|---------|
| TOCON | I/O | Complementary compare or PWM output 0 from timer 0 | 2, 7 | 3, 6 | C2 |
| T0C1N | I/O | Complementary compare or PWM output 1 from timer 0 | 26 | 14 | C5 |
| T0C2N | I/O | Complementary compare or PWM output 2 from timer 0 | 27 | 15 | B5 |
| T1C0N | I/O | Complementary compare or PWM output 0 from timer 1 | 11, 2 | 3, 7 | A1, C2 |
| T1C1N | I/O | Complementary compare or PWM output 1 from timer 1 | 12, 16 | 10, 8 | A2, A4 |
| T1C2N | I/O | Complementary compare or PWM output 2 from timer 0 | 5, 9 | 4 | B1 |
| T2C0N | I/O | Complementary compare or PWM output 0 from timer 2 | 10 | | |
| T2C1N | I/O | Complementary compare or PWM output 1 from timer 2 | 24 | | |
| T2C2N | I/O | Complementary compare or PWM output 2 from timer 2 | 21 | | |
| T3C0N | I/O | Complementary compare or PWM output 0 from timer 3 | 4 | | |
| T3C1N | I/O | Complementary compare or PWM output 1 from timer 3 | 18 | | |

Table 6-16. Timers Complementary Output Signal Descriptions (continued)

| | Table of the filling of the filling is a space of the filling is a spa | | | | | | | | |
|-------------|--|--|---------|---------|---------|--|--|--|--|
| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN | | | | |
| T3C2N | I/O | Complementary compare or PWM output 2 from timer 3 | 19 | | | | | | |

Table 6-17. Timers Fault Input Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|-------------------------|----------|---------|---------|
| T1F | I/O | Fault input for timer 1 | 23, 7, 9 | 6 | |

Table 6-18. Timers Prescaler Event Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|-------------------------------------|---------|---------|---------|
| TOPE | I/O | Prescaler event output from timer 0 | 20, 24 | 12 | C4 |
| T2PE | I/O | Prescaler event output from timer 2 | 14, 4 | | |

Table 6-19. UART Signal Descriptions

| SIGNAL NAME | PIN TYPE | DESCRIPTION | RKP PIN | RGE PIN | YBG PIN |
|-------------|-------------|---------------------------------------|--------------------------|-----------------|-----------------------|
| UART0CTS | I/O | UART clear-to-send input (active low) | 16, 24 | 10 | A4 |
| UART0RTS | I/O | UART request-to-send (active low) | 2, 23 | 3 | C2 |
| UART0RXD | I/O | UART receive data | 10, 11, 15, 18, 6 | 5, 7, 9 | A1, A3, B2 |
| UART0TXD | I/O | UART transmit data | 12, 13, 15, 27, 32, 7 | 15, 19, 6, 8, 9 | A2, A3, B3, B5, D3 |

6.3 Connections for Unused Pins and Modules

Table 6-20. Connections for Unused Pins

| FUNCTION | SIGNAL NAME | ACCEPTABLE PRACTICE(1) | PREFERRED PRACTICE ⁽¹⁾ |
|--------------------------------|-------------|------------------------|--------------------------------------|
| GPIO (digital) | DIOn | NC, GND, or VDDS | NC |
| SWD | DIO16_SWDIO | NC, GND, or VDDS | GND or VDDS |
| 3000 | DIO17_SWDCK | NC, GND, or VDDS | GND or VDDS |
| GPIO (digital or analog) | DIOn_Am | NC, GND, or VDDS | NC |
| 22 760 kl la enjetel | DIO3_X32P | NC or GND | NC |
| 32.768-kHz crystal | DIO4_X32N | - NC OF GND | INC |
| DC/DC convertor(2) | DCDC | NC | NC |
| DC/DC converter ⁽²⁾ | VDDS | VDDS | VDDS |

⁽¹⁾ NC = No connect

Copyright © 2025 Texas Instruments Incorporated

⁽²⁾ When the DC/DC converter is not used, the inductor between DCDC and VDDR can be removed. VDDR must still be connected, and the 10μF DCDC capacitor must be kept on the VDDR net.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1) (2)

| | | MIN | MAX | UNIT |
|---------------------|--|------|---------------------|------|
| VDDS | Supply voltage | -0.3 | 4.1 | V |
| | Voltage on any digital pin ⁽³⁾ | -0.3 | VDDS + 0.3, max 4.1 | V |
| | Voltage on crystal oscillator pins X48P and X48N | -0.3 | 1.24 | V |
| V _{in_adc} | Voltage on ADC input | 0 | VDDS | V |
| | Input level, RF pins | | 5 | dBm |
| T _{stg} | Storage temperature | -40 | 150 | °C |

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltage values are with respect to ground, unless otherwise noted.
- (3) Including analog capable DIOs.

7.2 ESD Ratings

| | | | | VALUE | UNIT |
|------------------|---------------|---|----------|-------|------|
| \/ | Electrostatic | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | All pins | ±1000 | V |
| V _{ESD} | discharge | Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾ | All pins | ±500 | V |

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | MAX | UNIT |
|---|---|------|-----|-------|
| CC2340xxxExxxxx devices (125°C parts) | Operating ambient temperature ⁽¹⁾ (2) | -40 | 125 | °C |
| CO2340XXXEXXXXX devices (125 C paris) | Operating junction temperature ⁽¹⁾ (2) | -40 | 125 | °C |
| CC2340xxxNxxxxx devices (85°C parts) | Operating ambient temperature ⁽¹⁾ (2) | -40 | 85 | °C |
| CO2340XXXIVXXXXX devices (65 C parts) | Operating junction temperature ⁽¹⁾ (2) | -40 | 85 | °C |
| Operating supply voltage (VDDS) | | 1.71 | 3.8 | V |
| Rising supply voltage slew rate | | 0 | 100 | mV/μs |
| Falling supply voltage slew rate ⁽³⁾ | | 0 | 1 | mV/μs |

- 1) Operation at or near maximum operating temperature for extended durations will result in a reduction in lifetime.
- 2) For thermal resistance details, refer to Thermal Resistance Characteristics table in this document.
- 3) For small coin-cell batteries, with high worst-case end-of-life equivalent source resistance, a 10μF VDDS input capacitor must be used to ensure compliance with this slew rate.

7.4 DCDC

When measured on the CC2340R5 reference design with $T_c = 25^{\circ}$ C and DCDC enabled unless otherwise noted.

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|--|-----------------|-----|-----|-----|------|
| VDDS supply voltage for DCDC operation (1) (2) | | 2.2 | 3.0 | 3.8 | V |

- (1) When the supply voltage drops below the DCDC operation min voltage, the device automatically transitions to use GLDO regulator on-chip.
- (2) A 10μH and 10μF load capacitor are required on the VDDR voltage rail. They must be placed close to the DCDC output pin.

7.5 Global LDO (GLDO)

When measured on the CC2340R5 reference design with T_{c} = 25°C

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|--|-----------------|------|-----|-----|------|
| VDDS supply voltage for GLDO operation (1) | | 1.71 | 3.0 | 3.8 | V |

(1) A 10µF capacitor is recommended at VDDR pin.

7.6 Power Supply and Modules

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---------------------------------|-----------------|------|------|-----|------|
| VDDS_BOD | | | | | |
| Brownout rising threshold (1) | | | 1.68 | | V |
| Brownout falling threshold (1) | | 1.67 | | V | |
| POR | | | | ' | |
| power-on reset power-up level | | | 1.5 | | V |
| power-on reset power-down level | | | 1.45 | | V |

(1) Brown-out Detector is trimmed at initial boot, value is kept until device is reset by a POR reset or the RSTN pin.

7.7 Battery Monitor

Measured on the CC2340R5 reference design with T_c = 25°C, unless otherwise noted

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|------------|-----------------|-----|-----|-----|------|
| Resolution | | | 22 | | mV |
| Range | | 1.7 | | 3.8 | V |
| Accuracy | VDDS = 3.0V | | 30 | | mV |

7.8 Temperature Sensor

Measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted.

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT | | |
|---|--|-----------------------|--------------------|-----|------|--|--|
| CC2340xxxExxxxx devices (125°C devices) | | | | | | | |
| Accuracy | -40°C to 125°C | -15/+9 ⁽¹⁾ | | °C | | | |
| CC2340xxxNxxxxx devices (85°C devices) | CC2340xxxNxxxxx devices (85°C devices) | | | | | | |
| Accuracy | -40°C to 85°C | | ±10 ⁽¹⁾ | | °C | | |

(1) Raw output from register.

7.9 Power Consumption-Power Modes

When measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, DCDC enabled, GLDO disabled, unless otherwise noted

| PAR | AMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-------------------|---------------|---|-----|------|-----|----------|
| Core Curi | rent Consump | tion with DCDC | | | | |
| I _{core} | Active | MCU running CoreMark from Flash at 48MHz | | 2.6 | | mA |
| I _{core} | Active | MCU running CoreMark from Flash at 48MHz | | 53 | | μA / MHz |
| I _{core} | Idle | Supply Systems and RAM powered, flash disabled, DMA disabled | | 0.8 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash disabled, DMA enabled | | 0.8 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash enabled, DMA disabled | | 1.1 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash enabled, DMA enabled | | 1.2 | | mA |
| I _{core} | Standby | RTC running, full RAM retention LFOSC, DCDC recharge current setting (ipeak = 1) | | 0.71 | | μΑ |
| I _{core} | Standby | RTC running, full RAM retention LFXT, DCDC recharge current setting (ipeak = 1) | | 0.74 | | μА |
| Core Curi | rent consumpt | ion with GLDO | • | | | |

7.9 Power Consumption-Power Modes (continued)

When measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, DCDC enabled, GLDO disabled, unless otherwise noted

| PAR | AMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-------------------|----------------|---|-----|------|-----|------|
| I _{core} | Active | MCU running CoreMark from Flash at 48MHz | | 4.1 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash disabled, DMA disabled | | 1.2 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash disabled, DMA enabled | | 1.3 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash enabled, DMA disabled | | 1.5 | | mA |
| I _{core} | Idle | Supply Systems and RAM powered, flash enabled, DMA enabled | | 1.7 | | mA |
| I _{core} | Standby | RTC running, full RAM retention LFOSC, default GLDO recharge current setting | | 1.1 | | μΑ |
| I _{core} | Standby | RTC running, full RAM retention LFXT default GLDO recharge current setting | | 1.15 | | μА |
| Reset, Sh | utdown Curre | nt Consumption | | | ' | |
| I _{core} | Reset | Reset. RSTN pin asserted or VDDS below power-on-reset threshold | | 165 | | nA |
| I _{core} | Shutdown | Shutdown measured in steady state. No clocks running, no retention, IO wakeup enabled | | 165 | | nA |
| Periphera | I Current Cons | sumption | | | ' | |
| I _{peri} | RF | Delta current, clock enabled, RF subsystem idle | | 40 | | μA |
| I _{peri} | Timers | Delta current with clock enabled, module is idle, one LGPT timer | | 2.4 | | μA |
| I _{peri} | I2C | Delta current with clock enabled, module is idle | | 10.6 | | μA |
| I _{peri} | SPI | Delta current with clock enabled, module is idle | | 3.4 | | μA |
| I _{peri} | UART | Delta current with clock enabled, module is idle | | 24.5 | | μA |
| I _{peri} | CRYPTO (AES) | Delta current with clock enabled, module is idle | | 3.8 | | μА |

7.10 Power Consumption–Radio Modes

When measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V with DCDC enabled unless otherwise noted

| | PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-----------------|------------------------|---|-----|------|-----|------|
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, GFSK, system bus off ⁽¹⁾ | | 5.3 | | mA |
| I _{RX} | Radio receive current | 2440MHz, 1Mbps, GFSK, DCDC OFF, system bus off ⁽¹⁾ | | 9 | | mA |
| I _{TX} | Radio transmit current | -8dBm output power setting 2440MHz system bus off ⁽¹⁾ | | 4.5 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz system bus off ⁽¹⁾ | | 5.1 | | mA |
| I _{TX} | Radio transmit current | 0dBm output power setting 2440MHz DCDC OFF, system bus off ⁽¹⁾ | | 9.0 | | mA |
| I _{TX} | Radio transmit current | +4dBm output power setting 2440MHz system bus off ⁽¹⁾ | | 7.9 | | mA |
| I _{TX} | Radio transmit current | +6dBm output power setting 2440MHz system bus off ⁽¹⁾ | | 8.9 | | mA |
| I _{TX} | Radio transmit current | +8dBm output power setting 2440MHz system bus off ⁽¹⁾ | | 10.7 | | mA |
| I _{TX} | Radio transmit current | +8dBm output power setting 2440MHz DCDC OFF, system bus off ⁽¹⁾ | | 19 | | mA |

⁽¹⁾ System bus off refers to device idle mode, DMA disabled, Flash disabled

7.11 Nonvolatile (Flash) Memory Characteristics

Over operating free-air temperature range and $V_{DDS} = 3.0V$ (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|-----------------|-----|-----|-----|----------|
| Flash sector size | | | 2 | | KB |
| Supported flash erase cycles before failure, full bank ⁽¹⁾ (2) | | 30 | | | k Cycles |
| Supported flash erase cycles before failure, single sector ⁽³⁾ | | 60 | | | k Cycles |

7.11 Nonvolatile (Flash) Memory Characteristics (continued)

Over operating free-air temperature range and V_{DDS} = 3.0V (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|--|------|-----|-----|---------------------|
| Maximum number of write operations per row before sector erase ⁽⁴⁾ | | | | 83 | Write Operations |
| CC2340xxxExxxxx devices (125°C devices) | | | | | |
| Flash retention | 105°C | 11.4 | | | Years |
| Flash retention | 125°C | 10 | | | Years |
| CC2340xxxNxxxxx devices (85°C devices) | | | | | |
| Flash retention | 85°C | 11.4 | | | Years |
| Flash sector erase current | Average delta current | | 1.2 | | mA |
| Flash sector erase time ⁽⁵⁾ | 0 erase cycles | | 2.2 | | ms |
| Flash write current | Average delta current, full sector at a time | | 1.7 | | mA |
| Flash write time ⁽⁵⁾ | full sector (2kB) at a time, 0 erase cycles | | 8.3 | | ms |

- (1) A full bank erase is counted as a single erase cycle on each sector.
- (2) Aborting flash during erase or program modes is not a safe operation.
- (3) Up to 16 customer-designated sectors can be individually erased an additional 30k times beyond the baseline bank limitation of 30k cycles.
- (4) Each wordline is 2048 bits (or 256 bytes) wide. This limitation corresponds to sequential memory writes of 4 (3.1) bytes minimum per write over a whole wordline. If additional writes to the same wordline are required, a sector erase is required once the maximum number of write operations per row is reached.
- (5) This number is dependent on Flash aging and increases over time and erase cycles.

7.12 Thermal Resistance Characteristics

| | | PACKAGE | | | | |
|-----------------------|--|---------------|---------------|----------------|----------|--|
| THERMAL METRIC | THERMAL METRIC(2) | RKP (VQFN) | RGE (VQFN) | YBG (WCSP) | UNIT (1) | |
| | | 40 PINS | 24 PINS | 28 PINS | | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 31.8 | 40.1 | 61.4 | °C/W | |
| R _{0JC(top)} | Junction-to-case (top) thermal resistance | 23.1 | 30.5 | 0.3 | °C/W | |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 12.7 | 17.2 | 14.2 | °C/W | |
| ΨЈТ | Junction-to-top characterization parameter | 0.3 | 0.4 | 0.2 | °C/W | |
| ΨЈВ | Junction-to-board characterization parameter | 12.7 | 17.1 | 14 | °C/W | |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | 3.3 | 3.4 | No thermal pad | °C/W | |

^{(1) °}C/W = degrees Celsius per watt.

7.13 RF Frequency Bands

Over operating free-air temperature range (unless otherwise noted).

| PARAMETER | MIN | TYP | MAX | UNIT |
|-----------------|------|-----|------|------|
| Frequency bands | 2360 | | 2510 | MHz |

7.14 Bluetooth Low Energy–Receive (RX)

When measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, f_{RF} = 2440MHz with DCDC enabled unless otherwise noted. All measurements are performed at the antenna input with a combined RX and TX path. All measurements are performed conducted.

7.19 2.4GHz RX/TX CW

When measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, f_{RF} = 2440MHz with DCDC enabled unless otherwise noted. All measurements are performed at the antenna input with a combined RX and TX path. All measurements are performed conducted.

| PARAMETER | | TEST CONDITIONS | MIN TYP | MAX | UNIT | | | | |
|-----------------------------------|--------------------------------------|-----------------|---------|-----|------|--|--|--|--|
| Spurious emissions a | Spurious emissions and harmonics | | | | | | | | |
| | f < 1GHz, outside restricted bands | | < -36 | | dBm | | | | |
| | f < 1GHz, restricted bands ETSI | +8dBm setting | < -54 | | dBm | | | | |
| Spurious emissions ⁽¹⁾ | f < 1GHz, restricted bands FCC | | < -55 | | dBm | | | | |
| | f > 1GHz, including harmonics (ETSI) | | < -30 | | dBm | | | | |
| Harmonics ⁽¹⁾ | Second harmonic | | <-42 | | dBm | | | | |
| | Third harmonic | | <-42 | | dBm | | | | |

⁽¹⁾ Suitable for systems targeting compliance with worldwide radio-frequency regulations ETSI EN 300 328 and EN 300 440 Class 2 (Europe), FCC CFR47 Part 15 (US), and ARIB STD-T66 (Japan).

7.20 Timing and Switching Characteristics

7.20.1 Reset Timing

| PARAMETER | MIN | TYP | MAX | UNIT |
|-------------------|-----|-----|-----|------|
| RSTN low duration | 1 | | | μs |

7.20.2 Wakeup Timing

Measured over operating free-air temperature with $V_{DDS} = 3.0V$ (unless otherwise noted). The times listed here do not include any software overhead (unless otherwise noted).

| PARAMETER | TEST CONDITIONS | MIN | TYP MAX | UNIT |
|--|--|-----|----------|------|
| MCU, Reset/Shutdown to Active ⁽¹⁾ | GLDO default charge current setting, VDDR capacitor fully charged (2) | 35 | 50–450 | μs |
| MCU, Standby to Active | MCU, Standby to Active (ready to execute code from flash). DCDC ON, default recharge current configuration | 33 | 3–43 (3) | μs |
| MCU, Standby to Active | MCU, Standby to Active (ready to execute code from flash). GLDO ON, default recharge current configuration | 33 | 3–50 (3) | μs |
| MCU, Idle to Active | Flash enabled in idle mode | | 3 | μs |
| MCU, Idle to Active | Flash disabled in idle mode | | 14 | μs |

⁽¹⁾ Wakeup time includes device ROM bootcode execution time. The wakeup time is dependent on remaining charge on VDDR capacitor when starting the device, and thus how long the device has been in Reset or Shutdown before starting up again.

7.20.3 Clock Specifications

7.20.3.1 48MHz Crystal Oscillator (HFXT)

Measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted. (4)

| | PARAMETER | MIN | TYP | MAX | UNIT |
|----------------|--|-----|------------------|-----|------|
| | Crystal frequency | | 48 | | MHz |
| ESR | Equivalent series resistance 6pF < C _L ≤ 9pF | | 20 | 60 | Ω |
| ESR | Equivalent series resistance 5pF < $C_L \le 6pF$ | | | 80 | Ω |
| C _L | Crystal load capacitance ⁽¹⁾ | 5 | 7 ⁽²⁾ | 9 | pF |

⁽²⁾ This is the best-case reset/shutdown to active time (including ROM bootcode operation), for the specified GLDO charge current setting considering the VDDR capacitor is fully charged and is not discharged during the reset and shutdown events; that is, when the device is in reset / shutdown modes for only a very short period of time.

⁽³⁾ Depending on VDDR capacitor voltage level

7.20.3.1 48MHz Crystal Oscillator (HFXT) (continued)

Measured on the CC2340R5 reference design with $T_c = 25^{\circ}C$, $V_{DDS} = 3.0V$, unless otherwise noted. (4)

| | PARAMETER | MIN | TYP I | IAX | UNIT |
|-------------------|--------------------------|-----|-------|-----|------|
| Start-up time (3) | Until clock is qualified | | 200 | | μs |

- Adjustable load capacitance is integrated into the device. External load capacitors are required for systems targeting compliance with certain regulations.
- (2) On-chip default connected capacitance including reference design parasitic capacitance. Connected internal capacitance is changed through software in the SysConfig.
- (3) Start-up time using the TI-provided power driver. Start-up time may increase if driver is not used.
- (4) Tai-Saw TZ3908AAAO43 has been validated for CC2340R5 design.

7.20.3.2 48MHz RC Oscillator (HFOSC)

Measured on the CC2340R5 reference design with $T_c = 25^{\circ}$ C, $V_{DDS} = 3.0$ V, unless otherwise noted

| | MIN | TYP | MAX | UNIT |
|-----------------------------------|-----|--------|-----|------|
| Frequency | | 48 | | MHz |
| Uncalibrated frequency accuracy | | ±3% | | |
| Calibrated frequency accuracy (1) | | ±0.25% | | |

Accuracy relative to the calibration source (HFXT)

7.20.3.3 32kHz Crystal Oscillator (LFXT)

Measured on the CC2340R5 reference design with T_c = 25°C, V_{DDS} = 3.0V, unless otherwise noted

| | MIN | TYP | MAX | UNIT |
|------------------------------------|-----|--------|-----|------|
| Crystal frequency | | 32.768 | | kHz |
| Supported crystal load capacitance | 6 | | 12 | pF |
| ESR | | 30 | 100 | kΩ |

7.20.3.4 32kHz RC Oscillator (LFOSC)

Measured on the CC2340R5 reference design with $T_c = 25^{\circ}C$, $V_{DDS} = 3.0V$, unless otherwise noted

| | MIN | TYP | MAX | UNIT |
|----------------------|-----|--------|-----|------|
| Calibrated frequency | | 32.768 | | kHz |

7.21 Peripheral Characteristics

7.21.1 UART

7.21.1.1 UART Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | MIN | TYP | MAX | UNIT |
|-----------|-----|-----|-----|-------|
| UART rate | | | 3 | MBaud |

7.21.2 SPI

7.21.2.1 SPI Characteristics

Using TI SPI driver, over operating free-air temperature range (unless otherwise noted)

| | PARAMETERS | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-------------------|---------------------|--|-----|-----|-----|------|
| fSCLK 1/tsclk | SPI clock frequency | Controller Mode and Peripheral Mode ⁽¹⁾ 2.7V ≤ VDDS < 3.8V | | | 12 | MHz |
| | | Controller Mode and Peripheral Mode (1) VDDS < 2.7V | | | 8 | MHz |
| DC _{SCK} | SCK Duty Cycle | | 45% | 50% | 55% | |

(1) Assume interfacing with ideal SPI controller and SPI peripheral devices

7.21.2.2 SPI Controller Mode

Using TI SPI driver, over operating free-air temperature range (unless otherwise noted)

| | PARAMETERS | TEST CONDITIONS | MIN | TYP MAX | UNIT |
|-----------------------|---|--|-------------------------|---|------|
| t _{SCLK_H/L} | SCLK High or Low time | | (t _{SPI} /2)-1 | t _{SPI} /2 (t _{SPI} /2)+1 | ns |
| t _{CS.LEAD} | CS lead-time, CS active to clock | | 1/2 | | SCLK |
| t _{CS.LAG} | CS lag time, Last clock to CS inactive | | 1/2 | | SCLK |
| t _{CS.ACC} | CS access time, CS active to PICO data out | | | 1 | SCLK |
| t _{CS.DIS} | CS disable time, CS inactive to PICO high impedance | | | 1 | SCLK |
| t _{VALID.CO} | PICO output data valid time(1) | SCLK edge to PICO valid, C _L = 20pF | | 13 | ns |
| t _{HD.CO} | PICO output data hold time ⁽²⁾ | C _L = 20pF | 0 | | ns |

- (1) Specifies the time to drive the next valid data to the output after the output changing SCLK clock edge
- (2) Specifies how long data on the output is valid after the output changing SCLK clock edge

8 Detailed Description

8.1 Overview

Section 4 shows the core modules of the CC2340R device.

8.2 System CPU

The CC2340R SimpleLink™ Wireless MCU contains an Arm® Cortex®-M0+ system CPU, which runs the application, the protocol stacks, and the radio. The Cortex-M0+ processor is built on a highly area and poweroptimized 32-bit processor core, with a 2-stage pipeline Von Neumann architecture. The processor delivers exceptional energy efficiency through a small but powerful instruction set and extensively optimized design, providing high-end processing hardware including a single-cycle multiplier. The Cortex-M0+ processor offers multiple benefits to developers, including:

- Ultra-low power, energy-efficient operation
- Deterministic, high-performance interrupt handling for time-critical applications
- Upward compatibility with the Cortex-M processor family

The Cortex-M0+ processor provides the excellent performance expected of a modern 32-bit architecture core, with higher code density than other 8-bit and 16-bit microcontrollers. Its features include the following:

- ARMv6-M architecture optimized for small-footprint embedded applications
- A subset of Arm Thumb/Thumb-2 mixed 16- and 32-bit instructions delivers the high performance expected of a 32-bit Arm
- Single-cycle multiply instruction
- · VTOR supporting offset of the vector table base address
- Serial Wire debug with HW break-point comparators
- Ultra-low-power consumption with integrated sleep modes
- SvsTick timer
- 48MHz operation
- 0.99DMIPS/MHz

Additionally, the CC2340R devices are compatible with all ARM tools and software.

8.3 Radio (RF Core)

The low-power RF Core (LRF) implements a high performance and highly flexible RF sub system containing RF and baseband circuitry in addition to a software defined digital radio (LRFD). LRFD provides a high-level, command-based API to the main CPU and handles all of the timing critical and low-level details of many different radio PHYs. Several signals are also available to control external circuitry such as RF switches or range extenders autonomously.

The software-defined modem is not programmable by customers but is instead loaded with precompiled images provided in the radio driver in the SimpleLink[™] Low Power F3 software development kit (SDK) for the CC23xx devices. This mechanism allows the radio platform to be updated for support of future versions of standards with over-the-air (OTA) updates while still using the same silicon. LRFD stores the code images in the RF SRAM and does not make use of any ROM memory, thus image loading from NV memory only occurs once after boot and also, no patching is required when exiting power modes.

8.3.1 Bluetooth Low Energy

The RF Core offers full support for Bluetooth Low Energy, including the high-speed 2Mbps physical layer and the 500kbps and 125kbps long-range PHYs (Coded PHY) through the TI-provided Bluetooth stack or through a high-level Bluetooth API.

The new high-speed mode allows data transfers up to 2Mbps. In addition to faster speeds, this mode offers significant improvements in energy efficiency and wireless coexistence with reduced radio communication time.

Bluetooth LE also enables unparalleled flexibility for adjustment of speed and range based on application needs, which capitalizes on the high-speed or long-range modes, respectively. Data transfers are now possible at

Product Folder Links: CC2340R2 CC2340R5

2Mbps, enabling the development of applications using voice, audio, imaging, and data logging that were not previously an option using Bluetooth low energy. With high-speed mode, existing applications deliver faster responses, richer engagement, and longer battery life. Bluetooth LE enables fast, reliable firmware updates.

8.3.2 802.15.4 (Thread and Zigbee)

Through a dedicated IEEE radio API, the RF Core supports the 2.4GHz IEEE 802.15.4-2011 physical layer (2 Mchips per second Offset-QPSK with DSSS 1:8), used in Thread and Zigbee protocols. TI also provides royalty-free protocol stacks for Thread and Zigbee, enabling a robust end-to end solution.

8.4 Memory

Up to 512KB nonvolatile (Flash) memory provides storage for code and data. The flash memory is in-system programmable and erasable. A special flash memory sector must contain a Customer Configuration section (CCFG) that is used by the boot ROM and TI-provided drivers to configure the device. This configuration is done through the ccfg.c source file that is included in all TI-provided examples.

Up to 64KB ultra-low leakage system static RAM (SRAM) can be used for both storage of data and execution of code. Retention of SRAM contents in Standby power mode is enabled by default and included in Standby mode power consumption numbers. System SRAM is always initialized to zeroes upon code execution during boot.

The ROM includes device bootcode firmware handling initial device trimming operations, security configurations, and device lifecycle management. The ROM also contains a serial (SPI and UART) bootloader that can be used for the initial programming of the device.

8.5 Cryptography

The CC2340R device comes with AES-128 cryptography hardware accelerator, reducing code footprint and execution time for cryptographic operations. It also has the benefit of being lower power and improves the availability and responsiveness of the system because the cryptography operations run in a background hardware thread. The AES hardware accelerators support the following block cipher modes and message authentication codes:

- AES ECB encrypt
- AES CBC encrypt
- · AES CTR encrypt/decrypt
- AES CBC-MAC
- AES GCM
- AEC CCM (uses a combination of CTR + CBC-MAC hardware via software drivers)

The AES hardware accelerator can be fed with plaintext/ciphertext from either the CPU or using DMA. Sustained throughput of one 16-byte ECB block per 23 cycles is possible, corresponding to > 30Mbps.

The CC2340R device supports Random Number Generation (RNG) using on-chip analog noise as the non-deterministic noise source for the purpose of generating a seed for a cryptographically secure counter deterministic random bit generator (CTR-DRBG) that in turn is used to generate random numbers for keys, initialization vectors (IVs), and other random number requirements. Hardware acceleration of AES CTR-DRBG is supported.

The CC2340R device includes a complete SHA 256 library in ROM, reducing the code footprint of the application. Use cases may include generating digests for use in digital signature algorithms, data integrity checks, and password storage.

Together with a large selection of open-source cryptography libraries provided with the Software Development Kit (SDK), this allows for secure and future-proof IoT applications to be easily built on top of the platform.

8.6 Timers

A large selection of timers are available as part of the CC2340R device. These timers are:

Real-Time Clock (RTC)

The RTC is a 67-bit, 2-channel timer running on the LFCLK system clock. The RTC is active in STANDBY and ACTIVE power states. When the device enters the RESET or SHUTDOWN state the RTC is reset.

The RTC accumulates time elapsed since reset on each LFCLK. The RTC counter is incremented by LFINC at a rate of 32.768kHz. LFINC indicates the period of LFCLK in µs, with an additional granularity of 16 fractional bits.

The counter can be read from two 32-bit registers. RTC.TIME8U has a range of approximately 9.5 hours with an LSB representing 8 microseconds. RTC.TIME524M has a range of approximately 71.4 years with an LSB representing 524 milliseconds.

There is hardware synchronization between the system timer (SYSTIM) and the RTC so that the multichannel and higher resolution SYSTIM remains in synchronization with the RTC's time base.

The RTC has two channels: one compare channel and one capture channel and is capable of waking the device out of the standby power state. The RTC compare channel is typically used only by system software and only during the standby power state.

System Timer (SYSTIM)

The SYSTIM is a 34-bit, 5-channel wrap-around timer with a per-channel selectable 32b slice with either a 1µs resolution and 1h11m35s range or 250ns resolution and 17m54s range. All channels support both capture and single-shot compare (posting an event) operation. One channel is reserved for system software, three channels are reserved for radio software and one channel is freely available to user applications.

For software convenience, a hardware synchronization mechanism automatically ensures that the RTC and SYSTIM share a common time base (albeit with different resolutions/spans). Another software convenience feature is that SYSTIM qualifies any submitted compare values so that the timer channel will immediately trigger if the submitted event is in the immediate past (4.294s with 1µs resolution and 1.049s with 250ns resolution).

General Purpose Timers (LGPT)

The CC2340R device provides up to four LGPTs with 3×16 bit timers and 1×24 bit timer, all running up to 48MHz. The LGPTs support a wide range of features such as:

- Three capture/compare channels
- One-shot or periodic counting
- Pulse width modulation (PWM)
- Time counting between edges and edge counting
- Input filter implemented on each of the channels for all timers
- IR generation feature available on Timer-0 and Timer-1
- Deadband feature available on Timer-1

The timer capture/compare and PWM signals are connected to IOs through the IO controller module (IOC), and the internal timer event connections to CPU, DMA, and other peripherals are through the event fabric, which allows the timers to interact with signals such as GPIO inputs, other timers, DMA, and ADC. Two LGPTs (2× 16-bit timers) support quadrature decoder mode to enable buffered decoding of quadrature-encoded sensor signals. The LGPTs are available in device Active and Idle power modes.

Table 8-1. Timer Comparison

| Feature | Timer 0 | Timer 1 | Timer 2 | Timer 3 |
|--------------------------------------|---------|---------|---------|---------|
| Counter Width | 16-bit | 16-bit | 16-bit | 24-bit |
| Quadrature Decoder | Yes | No | Yes | No |
| Park Mode on Fault | No | Yes | No | No |
| Programmable Dead- Band Insertion | No | Yes | No | No |

Product Folder Links: CC2340R2 CC2340R5

www.ti.com

Table 8-2. Timer Availability

| Part Number | Timer 0 | Timer 1 | Timer 2 | Timer 3 |
|-------------|---------|---------|---------|---------|
| CC2340R21 | Yes | Yes | No | No |
| CC2340R22 | Yes | Yes | Yes | Yes |
| CC2340R52 | Yes | Yes | Yes | Yes |
| CC2340R53 | Yes | Yes | Yes | Yes |

Watchdog timer

The watchdog timer is used to regain control if the system operates incorrectly due to software errors. Upon counter expiry, the watchdog timer resets the device when periodic monitoring of the system components and tasks fails to verify proper functionality. The watchdog timer runs on a 32kHz clock rate and operates in device active, idle, and standby modes, and cannot be stopped once enabled.

8.7 Serial Peripherals and I/O

The CC2340R device provides 1xUART, 1xSPI, and 1xI2C serial peripherals.

The SPI module supports both SPI controller and peripheral up to 12MHz with configurable phase and polarity.

The UART module implements universal asynchronous receiver and transmitter functions. They support flexible baud-rate generation up to a maximum of 3Mbps and IRDA SIR mode of operation.

The I²C module is used to communicate with devices compatible with the I²C standard. The I²C interface can handle 100kHz and 400kHz operation and can serve as both controller and target.

The I/O controller (IOC) controls the digital I/O pins and contains multiplexer circuitry to allow a set of peripherals to be assigned to I/O pins in a fixed manner over DIOs. All digital I/Os are interrupt and wake-up capable, have a programmable pullup and pulldown function, and can generate an interrupt on a negative or positive edge (configurable). When configured as an output, pins can function as either push-pull, open-drain, or open-source. Some GPIOs have high-drive capabilities, which are marked in **bold** in *Pin Configurations* and *Functions*.

For more information, see the CC23xx SimpleLink™ Wireless MCU Technical Reference Manual.

8.8 Battery and Temperature Monitor

A combined temperature and battery voltage monitor is available in the CC2340R device. The battery and temperature monitor allows an application to continuously monitor on-chip temperature and supply voltage and respond to changes in environmental conditions as needed. The module contains window comparators to interrupt the system CPU when temperature or supply voltage go outside defined windows. These events can also be used to wake up the device from Standby mode through the Always-On (AON) event fabric.

8.9 µDMA

The device includes a direct memory access (µDMA) controller. The µDMA controller provides a way to offload data-transfer tasks from the system CPU, thus allowing for more efficient use of the processor and the available bus bandwidth. The µDMA controller can perform a transfer between memory and peripherals. The µDMA controller has dedicated channels for each supported on-chip module and can be programmed to automatically perform transfers between peripherals and memory when the peripheral is ready to transfer more data.

Some features of the µDMA controller include the following (this is not an exhaustive list):

- Channel operation of up to 8 channels, with 6 channels having a dedicated peripheral interface and 2 channels having the ability to be triggered via configurable events.
- Transfer modes: memory-to-memory, memory-to-peripheral, peripheral-to-memory, and peripheral-to-peripheral
- Data sizes of 8, 16, and 32 bits
- Ping-pong mode for continuous streaming of data

8.10 Debug

On-chip debug is supported through the serial wire debug (SWD) interface, which is an ARM bi-directional 2-wire protocol that communicates with the JTAG Test Access Port (TAP) controller and allows for complete debug functionality. SWD is fully compatible with Texas Instruments' XDS family of debug probes.

8.11 Power Management

To minimize power consumption, the CC2340R supports a number of power modes and power management features (see Table 8-3).

| | Idbic | 6-3. FOWEI WIOUES | | | | |
|---------------------------------|---------------------|---------------------|-----------------------------|-----------|------|--|
| MODE | SOFTW | RESET PIN | | | | |
| MODE | ACTIVE | IDLE | STANDBY | SHUTDOWN | HELD | |

| Watchdog timer (WDT) | Available | Available | Available | Off | Off | |

Table 8-3. Power Modes

In the **Active** mode, both of MCU and AON power domains are powered. Clock gating is used to minimize power consumption. Clock gating to peripherals/subsystems is controlled manually by the CPU.

In **Idle** mode, the CPU is in sleep, but selected peripherals and subsystems (such as the radio) can be active. Infrastructure (Flash, ROM, SRAM, bus) clock gating is possible depending on the state of the DMA and debug subsystem.

In **Standby** mode, only the always-on (AON) domain is active. An external wake-up event, RTC event, or comparator event (LP-COMP) is required to bring the device back to active mode. Pin Reset will also drive the device from Standby to Active. MCU peripherals with retention do not need to be reconfigured when waking up again, and the CPU continues execution from where it went into standby mode. All GPIOs are latched in standby mode.

In **Shutdown** mode, the device is entirely turned off (including the AON domain), and the I/Os are latched with the value they had before entering shutdown mode. A change of state on any I/O pin defined as a *wake from shutdown pin* wakes up the device and functions as a reset trigger. The CPU can differentiate between reset in this way and reset-by-reset pin or power-on reset by reading the reset status register. The only states retained in this mode are the latched I/O state, the 3V register bank, and the flash memory contents.

^{(1) &}quot;Available" indicates that the specific IP or feature can be enabled by user application in the corresponding device operating modes. "On" indicates that the specific IP or feature is turned on, irrespective of the user application configuration of the device in the corresponding device operating mode. "Off" indicates that the specific IP or feature is turned off and not available for the user application in the corresponding device operating mode.

⁽²⁾ Software-based retention of CPU registers with context save and restore when entering and exiting standby power mode

Note

The power, RF, and clock management for the CC2340R device requires specific configuration and handling by software for optimized performance. This configuration and handling is implemented in the TI-provided drivers that are part of the CC2340R software development kit (SDK). Therefore, TI highly recommends using this software framework for all application development on the device. The complete SDK with FreeRTOS, device drivers, and examples are offered free of charge in source code.

8.12 Clock Systems

The CC2340R device has the following internal system clocks.

The 48MHz HFCLK is used as the main system (MCU and peripherals) clock. This is driven by the internal 48MHz RC Oscillator (HFOSC), which can track its accuracy against an external 48MHz crystal (HFXT). Radio operation requires an external 48MHz crystal.

The 32.768kHz LFCLK is used as the internal low-frequency system clock. It is used for the RTC, the watchdog timer (if enabled in standby power mode), and to synchronize the radio timer before or after Standby power mode. LFCLK can be driven by the internal 32.8kHz RC Oscillator (LFOSC), a 32.768kHz watch-type crystal, or a clock input in LFXT bypass mode. When using a crystal or the internal RC oscillator, the device can output the 32kHz LFCLK signal to other devices, thereby reducing the overall system cost.

8.13 Network Processor

Depending on the product configuration, the CC2340R device can function as a wireless network processor (WNP), a device running the wireless protocol stack with the application running on a separate host MCU, or as a system-on-chip (SoC), with the application and protocol stack running on the system CPU inside the device.

In the first case, the external host MCU communicates with the device using SPI or UART. In the second case, the application must be written according to the application framework supplied with the wireless protocol stack.

9 Application, Implementation, and Layout

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Reference Designs

The following reference designs should be followed closely when implementing designs using the CC2340R devices.

Special attention must be paid to RF component placement, decoupling capacitors, and DCDC regulator components, as well as ground connections for all of these.

| LP-EM-CC2340R5 Design |
|-----------------------|
| Files |

The CC2340R5 LaunchPad Design Files contain detailed schematics and layouts to build application-specific boards using the CC2340R devices in the 5mm x 5mm RKP package.

Sub1 GHz and 2.4 GHz Antenna Kit for LaunchPad™ Development 2.4GHz, including: Kit and SensorTag

The antenna kit allows real-life testing to identify the optimal antenna for your application. The antenna kit includes 16 antennas for frequencies from 169MHz to

- PCB antennas
- Helical antennas
- Chip antennas
- Dualband antennas for 868MHz and 915MHz combined with 2.4GHz

The antenna kit includes a JSC cable to connect to the Wireless MCU LaunchPad Development Kits and SensorTags.

9.2 Junction Temperature Calculation

This section shows the different techniques for calculating the junction temperature under various operating conditions. For more details, see Semiconductor and IC Package Thermal Metrics.

There are two recommended ways to derive the junction temperature from other measured temperatures:

1. From package temperature:

$$T_I = \psi_{\rm IT} \times P + T_{\rm case} \tag{1}$$

2. From board temperature:

$$T_I = \psi_{\rm IB} \times P + T_{\rm board} \tag{2}$$

P is the power dissipated from the device and can be calculated by multiplying the current consumption by the supply voltage. Thermal resistance coefficients are found in *Thermal Resistance Characteristics*.

Example:

In this example, we assume a simple use case where the radio is transmitting continuously at 0dBm output power. Let us assume we want to maintain a junction temperature equal or less than 85° C and the supply voltage is 3V. Using Equation 1, the temperature difference between the top of the case and the junction temperature is calculated. To calculate P, look up the current consumption for Tx at 85° C. At 85° C, the current consumption is approximately 5.5mA. This means that P is 5.5mA × 3V = 16.5mW.

The maximum case temperature to maintain and junction temperature of 85°C is then calculated as:

$$T_{\text{case}} < T_i - 0.4^{\circ} C/_W \times 23.4 mW = 84.99^{\circ} C$$
 (3)

For various application use cases, current consumption for other modules may have to be added to calculate the appropriate power dissipation. For example, the MCU may be running simultaneously as the radio, peripheral modules may be enabled, and so on. Typically, the easiest way to find the peak current consumption, and thus the peak power dissipation in the device, is to measure as described in the Measuring CC13xx and CC26xx Current Consumption application report.

10 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed as follows.

10.1 Device Nomenclature

To designate the stages in the product development cycle, TI assigns prefixes to all part numbers and/or date-code. Each device has one of three prefixes/identifications: X, P, or null (no prefix) (for example, X is in preview; therefore, an X prefix/identification is assigned).

Device development evolutionary flow:

- **X** Experimental device that is not necessarily representative of the final device's electrical specifications and may not use production assembly flow.
- **P** Prototype device that is not necessarily the final silicon die and may not necessarily meet final electrical specifications.

null Production version of the silicon die that is fully qualified.

Production devices have been characterized fully, and the quality and reliability of the device have been demonstrated fully. Tl's standard warranty applies.

Predictions show that prototype devices (X or P) have a greater failure rate than the standard production devices. Texas Instruments recommends that these devices not be used in any production system because their expected end-use failure rate still is undefined. Only qualified production devices are to be used.

TI device nomenclature also includes a suffix with the device family name. This suffix indicates the package type (for example, *RKP*).

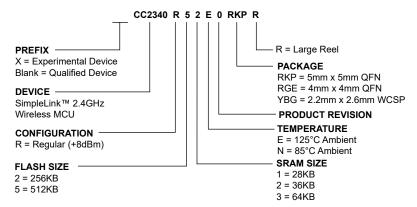

Figure 10-1. Device Nomenclature

10.2 Tools and Software

The CC2340R device is supported by a variety of software and hardware development tools.

Development Kit

CC2340R53 LaunchPad™ Development Kit

The CC2340R53 LaunchPad™ Development Kit enables development of high-performance wireless applications that benefit from low-power operation. The kit features the CC2340R53 SimpleLink Wireless MCU, which allows you to quickly evaluate and prototype 2.4GHz wireless applications such as Bluetooth Low Energy, Zigbee, and Thread. The kit works with the LaunchPad ecosystem, enabling additional functionality like sensors, display, and more.

Software

SimpleLink™ Low Power F3 software development kit (SDK)

The SimpleLink[™] Low Power F3 software development kit (SDK) provides a complete package for the development of wireless applications on the CC2340R family of devices. The SDK includes a comprehensive software package for the CC2340R device, including the following protocol stacks:

- Bluetooth Low Energy
- Zigbee 3.x

The SimpleLink Low Power F3 SDK is part of Tl's SimpleLink MCU platform, offering a single development environment that delivers flexible hardware, software, and tool options for customers developing wired and wireless applications. For more information about the SimpleLink MCU Platform, visit https://www.ti.com/simplelink.

Zephyr

Our Zephyr stack delivers a fully certified open-source and portable Bluetooth solution while maintaining low power, enabled by TI's Bluetooth LE Controller. Through a TI-managed downstream branch, we ensure faster delivery, bug fixes, and controlled updates for CC2340 and CC2755 devices.

Customers benefit from portability across silicon vendors, extensive testing with Twister, Ztest frameworks and additional validation, plus a complete production-ready SDK and TI tool ecosystem.

Development Tools

Code Composer Studio™ Integrated Development Environment (IDE)

Code Composer Studio is an integrated development environment (IDE) that supports TI's Microcontroller and Embedded Processors portfolio. Code Composer Studio comprises a suite of tools used to develop and debug embedded applications. It includes an optimizing C/C++ compiler, source code editor, project build environment, debugger, profiler, and many other features. The intuitive IDE provides a single user interface, taking you through each step of the application development flow. Familiar tools and interfaces allow users to get started faster than ever before.

CCS has support for all SimpleLink Wireless MCUs and includes support for EnergyTrace™ software (application energy usage profiling).

Code Composer Studio is provided free of charge when used in conjunction with the XDS debuggers included on a LaunchPad Development Kit.

Code Composer Studio™ Cloud IDE

Code Composer Studio (CCS) Cloud is a web-based IDE that allows you to create, edit, and build CCS projects. After you have successfully built your project, you can download and run it on your connected LaunchPad. Basic debugging, including features like setting breakpoints and viewing variable values, is now supported with CCS Cloud.

IAR Embedded Workbench® for Arm®

IAR Embedded Workbench[®] is a set of development tools for building and debugging embedded system applications using Assembler, C, and C++. It provides a completely integrated development environment that includes a project manager, editor, and build tools. IAR has support for all SimpleLink Wireless MCUs. It offers broad debugger support, including XDS110, IAR I-jet[™], and Segger J-Link[™]. IAR is also supported out-of-the-box on most software examples provided as part of the SimpleLink SDK.

SmartRF™ Studio

SmartRF™ Studio is a Windows® application that can be used to evaluate and configure SimpleLink Wireless MCUs from Texas Instruments. The application will help designers of RF systems to easily evaluate the radio at an early stage in the design process. It is especially useful for the generation of configuration register values and for practical testing and debugging of the RF system. SmartRF Studio can be used either as a standalone

application or together with applicable evaluation boards or debug probes for the RF device. Features of the SmartRF Studio include:

- Link tests—send and receive packets between nodes
- Antenna and radiation tests—set the radio in continuous wave TX and RX states
- Export radio configuration code for use with the TI SimpleLink SDK RF driver
- Custom GPIO configuration for signaling and control of external switches

UniFlash

UniFlash is a standalone tool used to program on-chip flash memory on TI MCUs. UniFlash has a GUI, command line, and scripting interface. UniFlash is available free of charge.

10.2.1 SimpleLink™ Microcontroller Platform

The SimpleLink microcontroller platform sets a new standard for developers with the broadest portfolio of wired and wireless Arm® MCUs (System-on-Chip) in a single software development environment. Delivering flexible hardware, software and tool options for your IoT applications. Invest once in the SimpleLink software development kit and use throughout your entire portfolio. Learn more at ti.com/simplelink.

10.3 Documentation Support

To receive notification of documentation updates on data sheets, errata, application notes, and similar, navigate to the device product folder (CC2340R5). In the upper right corner, click on Alert me to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

The current documentation that describes the MCU, related peripherals, and other technical collateral is listed as follows.

TI Resource Explorer

TI Resource Explorer Software examples, libraries, executables, and documentation are available for your device and development board.

Errata

CC2340R Silicon Errata

The silicon errata describes the known exceptions to the functional specifications for each silicon revision of the device and describes how to recognize a device revision.

Application Reports

All application reports for the CC2340R devices are found on the device product folder (CC2340R2 or CC2340R5).

Technical Reference Manual (TRM)

CC23xx SimpleLink™ Wireless MCU **TRM**

The TRM provides a detailed description of all modules and peripherals available in the device family.

10.4 Support Resources

TI E2E[™] support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

10.5 Trademarks

SimpleLink[™], LaunchPad[™], Code Composer Studio[™], EnergyTrace[™], and TI E2E[™] are trademarks of Texas Instruments.

I-jet[™] is a trademark of IAR Systems AB.

J-Link[™] is a trademark of SEGGER Microcontroller Systems GmbH.

Arm® and Cortex® are registered trademarks of Arm Limited (or its subsidiaries) in the US and/or elsewhere. Bluetooth® is a registered trademark of Bluetooth SIG.

CoreMark® is a registered trademark of Embedded Microprocessor Benchmark Consortium Corporation. is a registered trademark of Bluthtooth SIG.

Wi-Fi® is a registered trademark of Wi-Fi Alliance.

IAR Embedded Workbench® is a registered trademark of IAR Systems AB.

Windows® is a registered trademark of Microsoft Corporation.

All trademarks are the property of their respective owners.

10.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10.7 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| Changes from Revision E (September 2024) to Revision F (September 2025) | Page |
|---|------|
| Added IR Generation to timer features | 1 |
| Removed preview status for WCSP (YBG) package | |
| Updated formatting and corrected typos throughout the document | 1 |
| Updated features descriptions | |
| Included DIO18 in list of high drive pins (YBG) package | |
| Updated footnote in Absolute Maximum table | 18 |
| Updated DCDC footnote | |
| Updated thermal characteristics for YBG package | |
| Updated SPI peripheral CS timing | 29 |
| Updated Bluetooth Low Energy description | |
| Changes from Revision D (June 2024) to Revision E (September 2024) | Page |
| Updated the SDK name throughout the data sheet | |
| Updated CC2340R53E0RKPR from Preview to Released | |
| Corrected pin pitch in pin diagram title | |
| | |
| Corrected pin pitch in diagram title Updated the description of software and tools | 53 |

| Changes from Revision C (June 2023) to Revision D (June 2024) | Page |
|--|------|
| Combined all CC2340R family of devices to a single data sheet | 1 |
| Added all devices in CC2340R family | |
| Changed the comparison table to the CC2340R family of devices | |
| Added preview for YBG package | |
| Removed "Untrimmed brownout rising threshold" | |
| Updated parameter name of "Trimmed brownout rising threshold" | |
| Updated parameter name of "Trimmed brownout falling threshold" | |
| | |

| • | Removed "Temperature coefficient" | |
| | Changed "SPI clock frequency" | |
| | Added footnote (1) | |
| • | Changed "CS access time, CS active to POCI data out - VDDS=3.3V" | |
| • | Changed "CS access time, CS active to POCI data out - VDDS=5.5V" | |
| | Changed "CS disable time, CS active to POCI data out - VDDS=1.8V | |
| | Changed "CS disable time, CS inactive to POCI high impedance - VDDS=3.3V | 29 20 |
| | Changed "PICO input data setup time" | |
| • | Changed "POCI output data valid time" at 3.3V | |
| | Removed "(4)" from test conditions | |
| | | |
| • | Changed "POCI output data valid time" at 1.8V | |
| • | Removed "(4)" from test conditions | |
| • | Added "Data setup time" at f_SCL = 100kHz | |
| • | Changed "Data setup time" at f_SCL > 100kHz | |
| • | Changed "GPIO pullup current" at 1.8V | |
| • | Changed "GPIO pulldown current" at 1.8V | |
| • | Changed "GPIO low-to-high input transition, with hysteresis" at 1.8V | |
| • | Changed "GPIO high-to-low input transition, with hysteresis" at 1.8V | |
| • | Changed "GPIO input hysteresis" at 1.8V | |
| • | Changed "GPIO VOH at 10 mA load" at 3.0V | |
| • | Changed "GPIO VOL at 10 mA load" at 3.0V | |
| • | Changed "GPIO VOH at 2 mA load" at 3.0V | |
| • | Changed "GPIO VOL at 2 mA load" at 3.0V | |
| • | Changed "GPIO pullup current" at 3.8V | |
| • | Changed "GPIO pulldown current" at 3.8V | |
| • | Changed "GPIO low-to-high input transition, with hysteresis" at 3.8V | |
| • | Changed "GPIO high-to-low input transition, with hysteresis" at 3.8V | |
| • | Changed "GPIO input hysteresis" at 3.8V | |
| • | Added "Temperature Error" of Temp diode inside ADC | |
| • | Changed "Ultra-low power comparator current consumption" | |
| • | Added performance plots | 35 |

CC2340R2, CC2340R5 SWRS272F – APRIL 2023 – REVISED NOVEMBER 2025

| • | Corrected timer features | .45 |
|---|--------------------------|-----|
| • | Updated descriptions | .49 |

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

DIE SIZE BALL GRID ARRAY

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

 2. This drawing is subject to change without notice.

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints.
 See Texas Instruments Literature No. SNVA009 (www.ti.com/lit/snva009).

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

⁽¹⁾ Status: For more details on status, see our product life cycle.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No. RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

PACKAGE OPTION ADDENDUM

www.ti.com 21-Nov-2025

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF CC2340R5:

Images above are just a representation of the package family, actual package may vary. Refer to the product data sheet for package details.

4204104/H

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
 2. This drawing is subject to change without notice.
- 3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

NOTES: (continued)

- 4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
- 5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

NOTES: (continued)

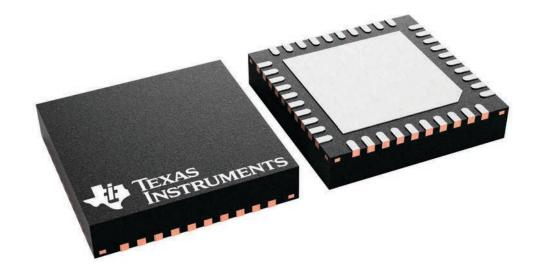

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
