# CDx4AC109 Dual J-K Positive-Edge-Triggered Flip-flops with Clear and Preset

#### 1 Features

- AC types feature 1.5V to 5.5V operation and balanced noise immunity at 30% of the supply voltage
- Speed of bipolar F, AS, and S, with significantly reduced power consumption
- Balanced propagation delays
- ±24mA output drive current
  - Fanout to 15 F devices
- SCR-latchup-resistant CMOS process and circuit
- Exceeds 2kV ESD protection per MIL-STD-883, method 3015

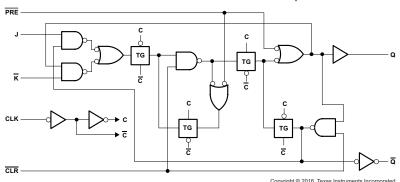

## 2 Description

CD74AC109-Q1 device The contains independent J-K positive edge triggered flip-flops. A low level at the preset (PRE) or clear (CLR) inputs sets or resets the outputs, regardless of the levels of the other inputs. When PRE and CLR are inactive (high), data at the J and K inputs that meets the setup-time requirements is transferred to the outputs on the positive-going edge of the clock (CLK) pulse. The device is qualified for automotive applications.

#### **Device Information**

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE(2)
	D (SOIC, 16)	9.90mm x 3.90mm
CDx4AC109	N (PDIP, 16)	19.3mm x 6.35mm
	J (CDIP, 16)	19.56mm x 6.92mm

- (1) For more information, see Mechanical, Packaging, and Orderable Information.
- The body size (length × width) is a nominal value and does not include pins.

## 4 Specifications

## 4.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage range		-0.5	6	V
I <sub>IK</sub> (2)	Input clamp current	$(V_I < 0 \text{ V or } V_I > V_{CC})$		±20	mA
I <sub>OK</sub> (2)	Output clamp current	$(V_O < 0 \text{ V or } V_O > V_{CC})$		±50	mA
Io	Continuous output current	$(V_O > 0 \text{ V or } V_O < V_{CC})$		±50	mA
	Continuous current through V <sub>CC</sub> or C	SND .		±100	mA
T <sub>stg</sub>	Storage temperature range		-65	150	°C

<sup>(1)</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 4.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), Level H0 <sup>(1)</sup>	±2000	V

<sup>(1)</sup> JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.

## 4.3 Recommended Operating Conditions

(over operating free-air temperature range (unless otherwise noted)(1)

			T <sub>A</sub> = 2	5°C	-55°C to	125°C	-40°C to 85°C		LINUT
			MIN	MAX	MIN	MAX	MIN	MAX	UNIT

# **4.12 Operating Characteristics**

 $V_{CC}$  = 5 V,  $T_A$  = 25°C

	PARAMETER	TYP	UNIT
C <sub>pd</sub>	Power dissipation capacitance	56	pF

## **5 Parameter Measurement Information**

- C<sub>L</sub> includes probe and test-fixture capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1 MHz,  $Z_O$  = 50  $\Omega$ ,  $t_r$  = 3 ns,  $t_f$  = 3 ns. Phase relationships between waveforms are arbitrary.
- D. For clock inputs,  $f_{max}$  is measured with the input duty cycle at 50%.
- E. The outputs are measured one at a time with one input transition per measurement.
- F. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd</sub>.
- G.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- H. t<sub>PLZ</sub> and t<sub>PHZ</sub> are the same as t<sub>dis</sub>.
- I. All parameters and waveforms are not applicable to all devices.

t <sub>PHZ</sub> /t <sub>PZH</sub>	GND

## **6 Detailed Description**

#### 6.1 Overview

A low level at the preset  $(\overline{PRE})$  or clear  $(\overline{CLR})$  inputs sets or resets the outputs, regardless of the levels of the other inputs. When  $\overline{PRE}$  and  $\overline{CLR}$  are inactive (high), data at the J and  $\overline{K}$  inputs meeting the setup-time requirements are transferred to the outputs on the positive-going edge of the clock (CLK) pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold-time interval, data at the J and  $\overline{K}$  inputs can be changed without affecting the levels at the outputs. These versatile flip-flops can perform as toggle flip-flops by grounding  $\overline{K}$  and tying J high. They also can perform as D-type flip-flops if J and  $\overline{K}$  are tied together.

## **6.2 Functional Block Diagram**

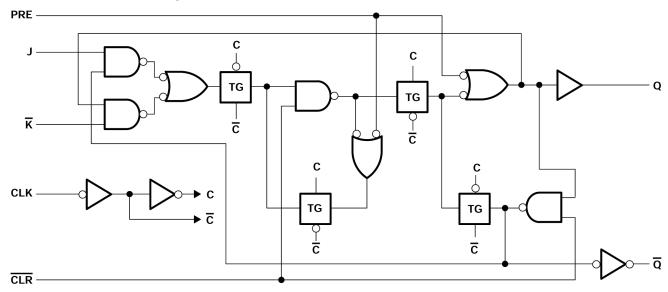

Figure 6-1. Logic Diagram, Each Flip-flop (Positive Logic)

#### 6.3 Device Functional Modes

Table 6-1. Function Table (Each Flip-flop)

		INPUTS	OUTPUTS			
PRE	CLR	CLK	J	K	Q	Q
L	Н	X	Х	Х	Н	L
Н	L	X	Х	Х	L	Н
L	L	X	Х	Х	H <sup>(1)</sup>	H <sup>(1)</sup>
Н	Н	1	L	L	L	Н
Н	Н	1	Н	L		Toggle
Н	Н	<b>↑</b>	L	Н	Q0	<u>Q</u> 0
Н	Н	1	Н	Н	Н	L
Н	Н	L	Х	Х	Q0	<u>Q</u> 0

(1) Unpredictable and unstable condition if both  $\overline{\text{PRE}}$  and  $\overline{\text{CLR}}$  go low simultaneously

## 7 Application and Implementation

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

## 7.1 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. A  $0.1\mu F$  capacitor is recommended for this device. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. The  $0.1\mu F$  and  $1\mu F$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

#### 7.2 Layout

### 7.2.1 Layout Guidelines

- · Bypass capacitor placement
  - Place near the positive supply terminal of the device
  - Provide an electrically short ground return path
  - Use wide traces to minimize impedance
  - Keep the device, capacitors, and traces on the same side of the board whenever possible
- Signal trace geometry
  - 8mil to 12mil trace width
  - Lengths less than 12cm to minimize transmission line effects
  - Avoid 90° corners for signal traces
  - Use an unbroken ground plane below signal traces
  - Flood fill areas around signal traces with ground
  - For traces longer than 12cm
    - Use impedance controlled traces
    - Source-terminate using a series damping resistor near the output
    - Avoid branches; buffer signals that must branch separately

#### 7.2.2 Layout Example

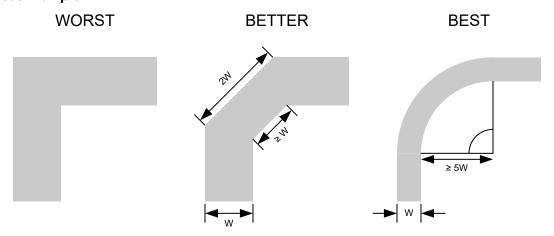

Figure 7-1. Example Trace Corners for Improved Signal Integrity

## 8 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

### 8.1 Documentation Support

#### 8.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, CMOS Power Consumption and Cpd Calculation application report
- Texas Instruments, *Designing With Logic* application report
- Texas Instruments, Thermal Characteristics of Standard Linear and Logic (SLL) Packages and Devices application report

## 8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

## 8.3 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 8.4 Trademarks

TI E2E<sup>™</sup> is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

#### 8.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 8.6 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

## 9 Revision History

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
