

**CD74HC595** SCHS353A - JANUARY 2004 - REVISED FEBRUARY 2022

## CD74HC595 8-Bit Shift Registers With 3-State Output Registers

#### 1 Features

- 8-Bit serial-in, parallel-out shift
- Wide operating voltage range of 2 V to 6 V
- High-current 3-state outputs can drive up to 15 LSTTL loads
- Low power consumption, 80-µA max I<sub>CC</sub>
- Typical  $t_{PD}$  = 14 ns
- ±6-mA output drive at 5 V
- Low input current of 1 µA max
- Shift register has direct clear

## 2 Description

The CD74HC595 is an 8-bit serial-input paralleloutput shift register with output registers and 3-state outputs.

#### **Device Information**

| PART NUMBER | PACKAGE <sup>(1)</sup> | BODY SIZE (NOM)    |
|-------------|------------------------|--------------------|
| CD74HC595E  | PDIP (16)              | 19.31 mm × 6.35 mm |
| CD74HC595DW | SOIC-DW (16)           | 10.30 mm × 7.50 mm |
| CD74HC595M  | SOIC-D (16)            | 9.90 mm × 3.90 mm  |
| CD74HC595NS | SO (16)                | 10.20 mm × 5.30 mm |
| CD74HC595SM | SSOP (16)              | 6.20 mm × 5.30 mm  |

For all available packages, see the orderable addendum at the end of the data sheet.

## **5 Specifications**

#### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                  |                                     |  | MIN  | MAX | UNIT |
|------------------|-------------------------------------|--|------|-----|------|
| V <sub>CC</sub>  | Supply voltage                      |  | -0.5 | 7   | V    |
| I <sub>IK</sub>  | Input clamp current <sup>(2)</sup>  | For V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>CC</sub> |      | ±20 | mA   |
| I <sub>OK</sub>  | Output clamp current <sup>(2)</sup> | For V <sub>O</sub> < 0 or V <sub>O</sub> > V <sub>CC</sub> |      | ±20 | mA   |
| Io               | Continous output current            | For $-0.5V < V_O = 0$ to $V_{CC}$                          |      | ±35 | mA   |
|                  | Continuous current through          | V <sub>CC</sub> or GND                                     |      | ±70 | mA   |
| T <sub>stg</sub> | Storage temperature                 |  | -65  | 150 | °C   |

<sup>(1)</sup> Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 5.2 Recommended Operating Conditions<sup>(1)</sup>

|                    |                                     |                        | MIN  | NOM | MAX             | UNIT |
|--------------------|-------------------------------------|------------------------|------|-----|-----------------|------|
| V <sub>CC</sub>    | Supply voltage                      |                        | 2    | 5   | 6               | V    |
|                    |                                     | V <sub>CC</sub> = 2V   | 1.5  |     |                 |      |
| V <sub>IH</sub>    | High-level input voltage            | V <sub>CC</sub> = 4.5V | 3.15 |     |                 | V    |
|                    |                                     | V <sub>CC</sub> = 6V   | 4.2  |     |                 |      |
|                    |                                     | V <sub>CC</sub> = 2V   |      |     | 0.5             |      |
| V <sub>IL</sub>    | Low-level input voltage             | V <sub>CC</sub> = 4.5V |      |     | 1.35            | V    |
|                    |                                     | V <sub>CC</sub> = 6V   |      |     | 1.8             |      |
| VI                 | Input voltage                       |                        | 0    |     | V <sub>CC</sub> | V    |
| Vo                 | Output voltage                      |                        | 0    |     | V <sub>CC</sub> | V    |
|                    |                                     | V <sub>CC</sub> = 2V   |      |     | 1000            |      |
| t <sub>t</sub> (2) | Input transition rise and fall time | V <sub>CC</sub> = 4.5V |      |     | 500             | ns   |
|                    |                                     | V <sub>CC</sub> = 6V   |      |     | 400             |      |
| T <sub>A</sub>     | Operating free-air temperature      |                        | -55  |     | 125             | °C   |

<sup>(1)</sup> All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

#### 5.3 Thermal Information

|                 |   | N (PDIP) | DW (SOIC) | D (SOIC) | NS (SO) | DB (SSOP) |      |
|-----------------|---|----------|-----------|----------|---------|-----------|------|
| THERMAL METRIC  |   | 16 PINS  | 16 PINS   | 16 PINS  | 16 PINS | 16 PINS   | UNIT |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance <sup>(1)</sup> | 67       | 57        | 73       | 64      | 82        | °C/W |

 For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

<sup>(2)</sup> The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>(2)</sup> If this device is used in the threshold region (from V<sub>IL</sub>max = 0.5 V to V<sub>IH</sub>min = 1.5 V), there is a potential to go into the wrong state from induced grounding, causing double clocking. Operating with the inputs at t<sub>t</sub> = 1000 ns and V<sub>CC</sub> = 2 V does not damage the device; however, functionally, the CLK inputs are not ensured while in the shift, count, or toggle operating modes.

<sup>(1)</sup> This setup time allows the storage register to receive stable data from the shift register. The clocks can be tied together, in which case the shift register is one clock pulse ahead of the storage register.

VOLTAGE WAVEFORMS
PROPAGATION DELAY AND OUTPUT TRANSITION TIMES

VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES FOR 3-STATE OUTPUTS

NOTES: A. C<sub>I</sub> includes probe and test-fixture capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z<sub>O</sub> = 50 Ω, t<sub>Γ</sub> = 6 ns, t<sub>f</sub> = 6 ns.
- D. For clock inputs,  $f_{\text{max}}$  is measured when the input duty cycle is 50%.
- E. The outputs are measured one at a time, with one input transition per measurement.
- F. tpLz and tpHz are the same as tdis.
- G. tpzL and tpzH are the same as ten.
- H. tplH and tpHL are the same as tpd.

## 7 Detailed Description

### 7.1 Overview

The CD74HC595 device contains an 8-bit serial-in, parallel-out shift register that feeds an 8-bit D-type storage register. The storage register has parallel 3-state outputs. Separate clocks are provided for both the shift and storage registers. The shift register has a direct overriding clear  $(\overline{SRCLR})$  input, serial  $(\overline{SER})$  input, and serial output for cascading. When the output-enable  $(\overline{OE})$  input is high, the outputs are in the high-impedance state.

Both the shift register clock (SRCLK) and storage register clock (RCLK) are positive-edge triggered. If both clocks are connected together, the shift register always is one clock pulse ahead of the storage register.

## 7.2 Functional Block Diagram

## 7.3 Device Functional Modes

Table 7-1 lists the functional modes of the CD74HC595.

Table 7-1. Function Table

|     |          |        | iubi | <i>5 1</i> 1. 1 0 | iliction labie  |
|-----|----------|--------|------|-------------------|---|
|     |          | INPUTS |      |                   | FUNCTION  |
| SER | SRCLK    | SRCLR  | RCLK | ŌĒ                | FUNCTION  |
| Х   | Х        | Х      | Х    | Н                 | Outputs Q <sub>A</sub> – Q <sub>H</sub> are disabled  |
| Х   | Х        | Х      | Х    | L                 | Outputs Q <sub>A</sub> – Q <sub>H</sub> are enabled.  |
| Х   | Х        | L      | Х    | Х                 | Shift register is cleared.  |
| L   | 1        | Н      | х    | х                 | First stage of the shift register goes low. Other stages store the data of previous stage, respectively.  |
| Н   | <b>↑</b> | Н      | Х    | Х                 | First stage of the shift register goes high. Other stages store the data of previous stage, respectively. |
| Х   | Х        | Н      | 1    | Х                 | Shift-register data is stored in the storage register.  |
| Х   | <b>↑</b> | Н      | 1    | х                 | Data in shift register is stored in the storage register, the data is then shifted through.               |

## 8 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. A 0.1- $\mu$ F capacitor is recommended for this device. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. The 0.1- $\mu$ F and 1- $\mu$ F capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 9 Layout

### 9.1 Layout Guidelines

When using multiple-input and multiple-channel logic devices inputs must not ever be left floating. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such unused input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a logic high or logic low voltage, as defined by the input voltage specifications, to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, the inputs are tied to GND or  $V_{CC}$ , whichever makes more sense for the logic function or is more convenient.

## 10 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

#### **10.1 Documentation Support**

#### 10.1.1 Related Documentation

### 10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 10.3 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 10.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 10.6 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

## **PACKAGE OPTION ADDENDUM**

www.ti.com 9-Nov-2025

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

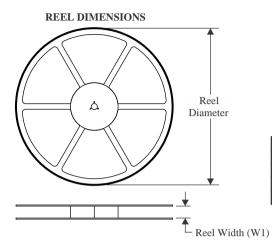

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

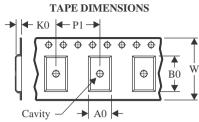

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

- per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

SOF

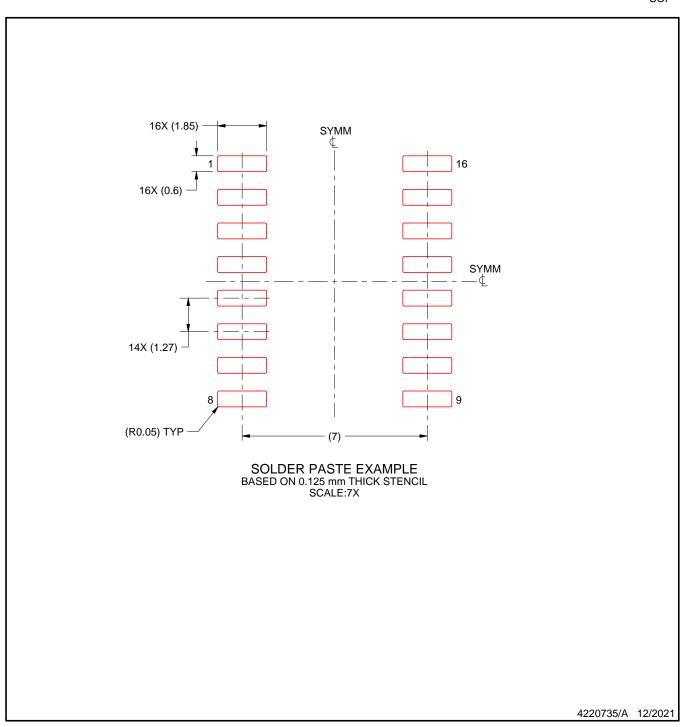

### NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOF

#### NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

## D (R-PDS0-G16)

## PLASTIC SMALL OUTLINE

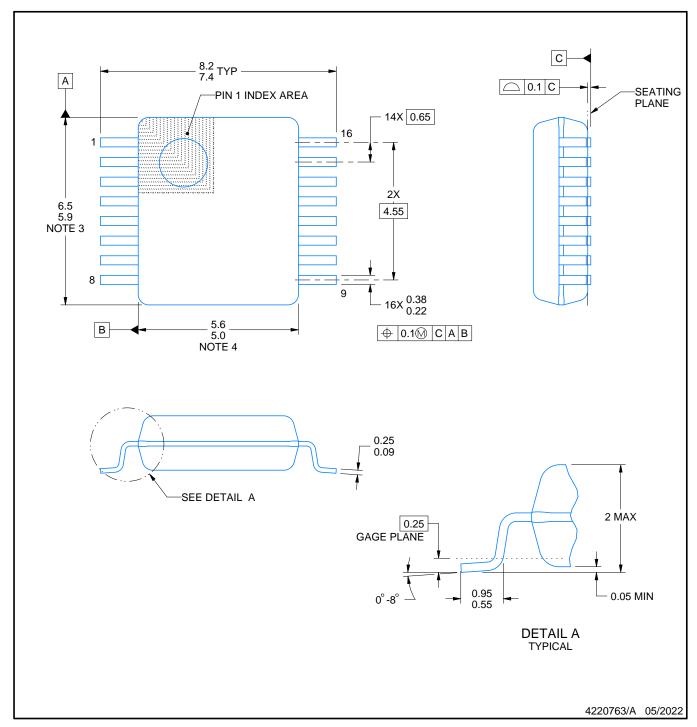

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

SMALL OUTLINE PACKAGE

#### NOTES:

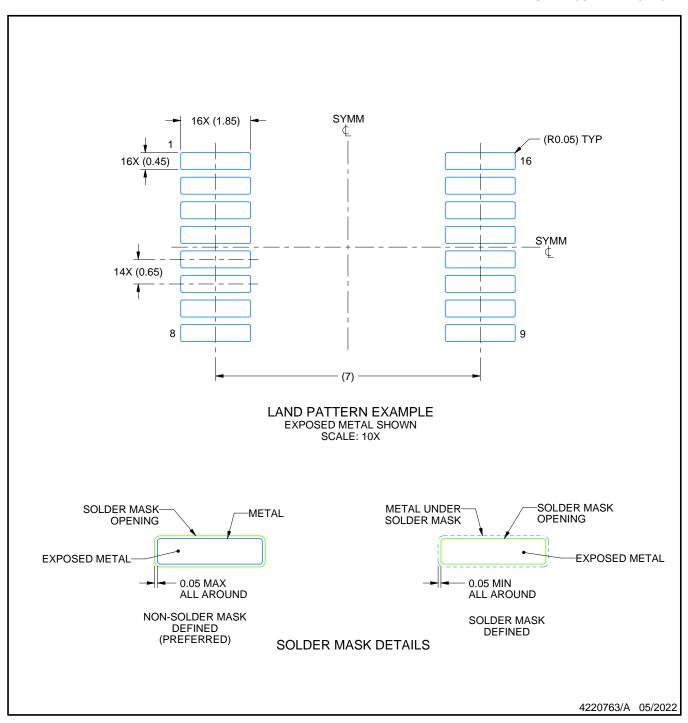

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
  4. Reference JEDEC registration MO-150.

SMALL OUTLINE PACKAGE

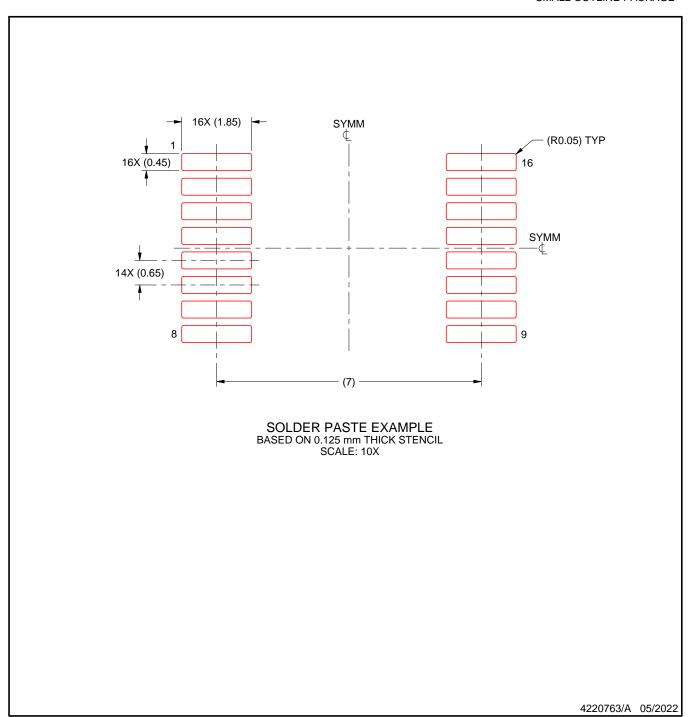

NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE PACKAGE

NOTES: (continued)

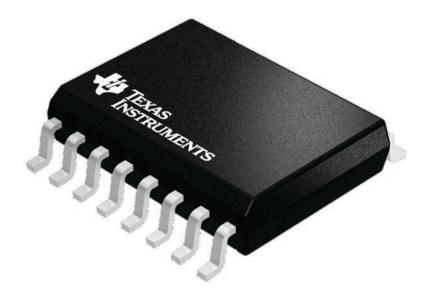

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

7.5 x 10.3, 1.27 mm pitch

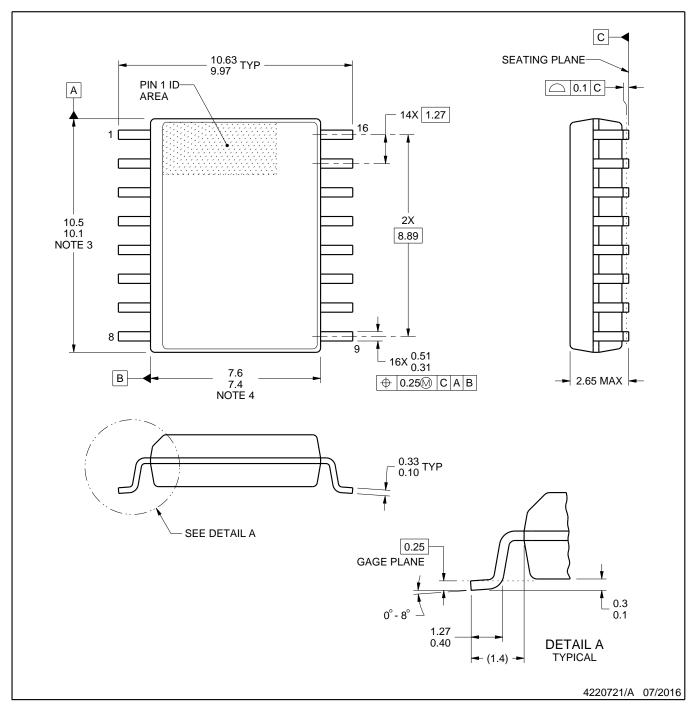

SMALL OUTLINE INTEGRATED CIRCUIT

This image is a representation of the package family, actual package may vary. Refer to the product data sheet for package details.

SOIC

#### NOTES:

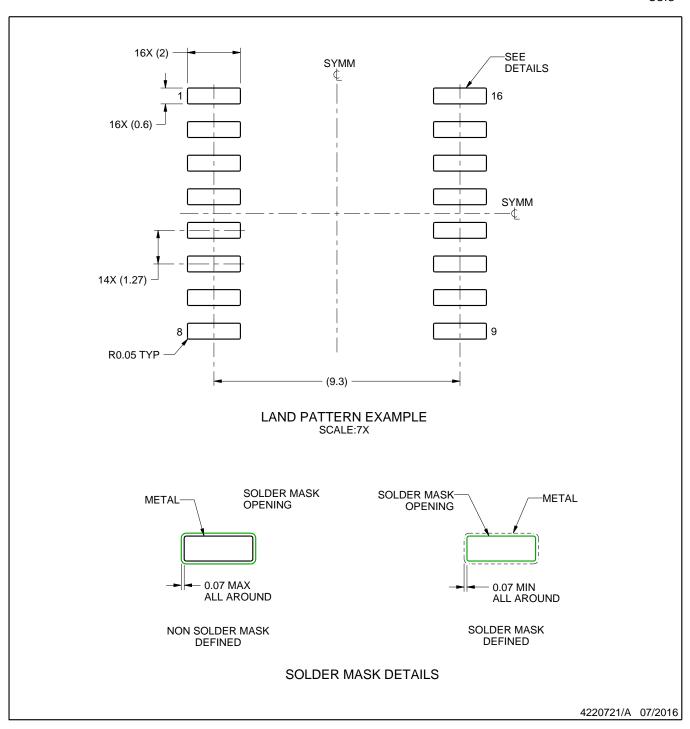

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing
- per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.
- 5. Reference JEDEC registration MS-013.

SOIC

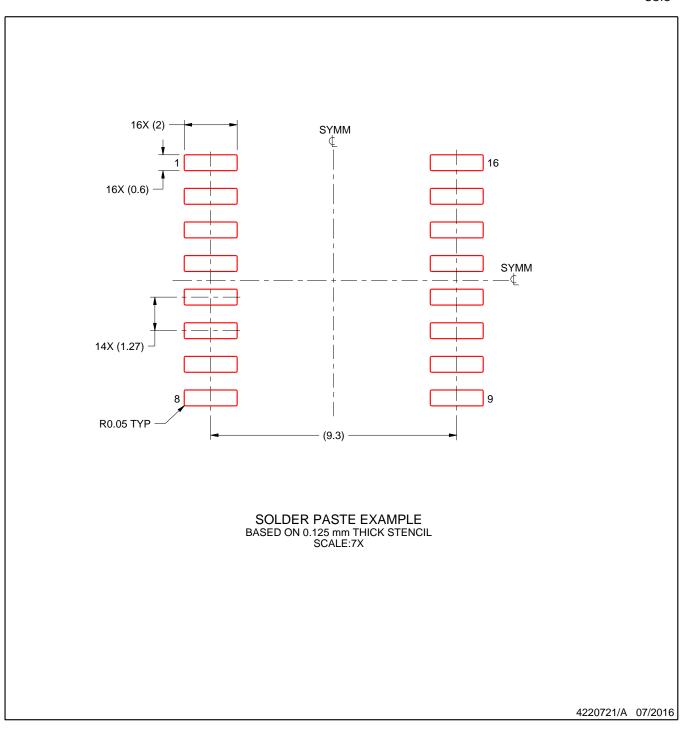

#### NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOIC

#### NOTES: (continued)

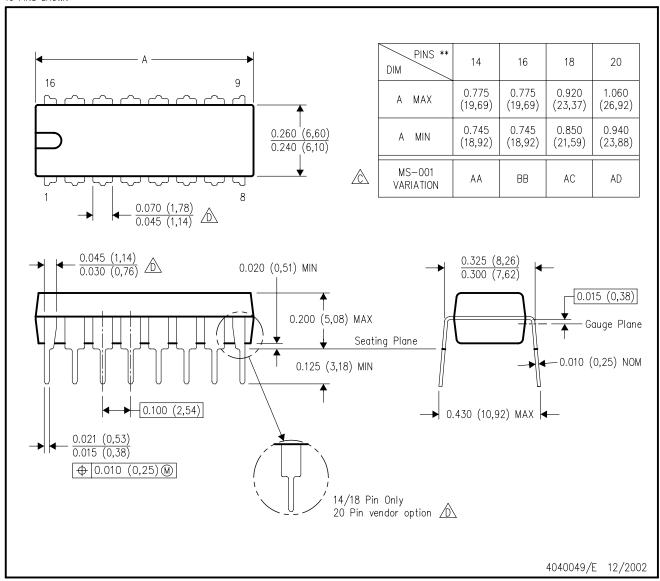

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

## N (R-PDIP-T\*\*)

## PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.
