CDCLVP1102 Two-LVPECL Output, High-Performance Clock Buffer

1 Features

- 1:2 Differential Buffer
- Single Clock Input
- Universal Inputs Can Accept LVPECL, LVDS, LVCMOS/LVTTL
- Two LVPECL Outputs
- Maximum Clock Frequency: 2 GHz
- Maximum Core Current Consumption: 33 mA
- Very Low Additive Jitter: <100 fs, RMS in 10-kHz to 20-MHz Offset Range
- 2.375-V to 3.6-V Device Power Supply
- Maximum Propagation Delay: 450 ps
- Maximum Output Skew: 10 ps
- LVPECL Reference Voltage, V_{AC_REF}, Available for Capacitive-Coupled Inputs
- Industrial Temperature Range: –40°C to 85°C
- Supports 105°C PCB Temperature (Measured at Thermal Pad)
- Available in 3-mm × 3-mm QFN-16 (RGT) Package
- ESD Protection Exceeds 2 kV (HBM)

2 Applications

- Wireless Communications
- Telecommunications/Networking
- Medical Imaging
- Test and Measurement Equipment

3 Description

The CDCLVP1102 is a highly versatile, low additive jitter buffer that can generate two copies of LVPECL clock outputs from one LVPECL, LVDS, or LVCMOS input for a variety of communication applications. It has a maximum clock frequency up to 2 GHz. The overall additive jitter performance is less than 0.1 ps, RMS from 10 kHz to 20 MHz, and overall output skew is as low as 10 ps, making the device a perfect choice for use in demanding applications.

The CDCLVP1102 clock buffer distributes a single clock input (IN) to two pairs of differential LVPECL clock outputs (OUT0, OUT1) with minimum skew for clock distribution. The inputs can be LVPECL, LVDS, or LVCMOS/LVTTL.

The CDCLVP1102 is specifically designed for driving 50-Ω transmission lines. When driving the inputs in single-ended mode, the LVPECL bias voltage (V_{AC_REF}) should be applied to the unused negative input pin. However, for high-speed performance up to 2 GHz, differential mode is strongly recommended.

The CDCLVP1102 is characterized for operation from –40°C to 85°C and is available in a QFN-16, 3-mm × 3-mm package.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
CDCLVP1102	QFN (16)	3.00 mm × 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (January 2011) to Revision D — **Page**

- Added support for 105°C thermal pad temperature ... 1
- Added *Device Information* and *Pin Configuration and Functions* sections, *ESD Rating* table, *Feature Description*, *Device Functional Modes*, *Application and Implementation*, *Power Supply Recommendations*, *Layout*, *Device and Documentation Support*, and *Mechanical, Packaging, and Orderable Information* sections ... 1
- Added V_{OH} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 2.375 V to 2.625 V ... 6
- Added V_{OL} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 2.375 V to 2.625 V ... 6
- Added I_{EE} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 2.375 V to 2.625 V ... 6
- Added I_{CC} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 2.375 V to 2.625 V ... 6
- Added V_{OH} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 3 V to 3.6 V ... 7
- Added V_{OL} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 3 V to 3.6 V ... 7
- Added I_{EE} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 3 V to 3.6 V ... 7
- Added I_{CC} specification for $T_{PCB} \le 105ºC$ in Electrical Characteristics: LVPECL Output, at V_{CC} = 3 V to 3.6 V ... 7

Changes from Revision B (May 2010) to Revision C — **Page**

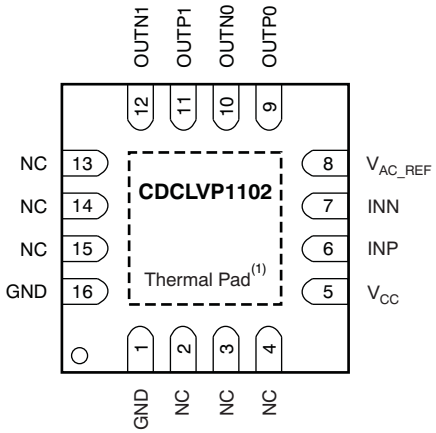
- Revised description of pin 8 ... 3
- Corrected V_{IL} parameter description in *Electrical Characteristics* table for LVCMOS inputs ... 5
- Added footnote (2) to *Electrical Characteristics* table for LVPECL Output, V_{CC} = 2.375 V to 2.625 V ... 6
- Changed recommended resistor values in Figure 12(a) ... 13
- Changed resistor values in Figure 16 ... 15
- Changed resistor values in Figure 17 ... 15

Changes from Revision A (October 2009) to Revision B **Page**

- Changed description of OUTN1 and OUTN0 pins in *Pin Functions* table 3

5 Pin Configuration and Functions

RGT Package
16-Pin VQFN
Top View



(1) Thermal pad must be soldered to ground.

Pin Functions

PIN		TYPE	DESCRIPTION
NAME	NUMBER		
GND	1, 16	Ground	Device ground
INP, INN	6, 7	Input	Differential input pair or single-ended input
OUTP1, OUTN1	11, 12	Output	Differential LVPECL output pair no. 1. Unused output pair can be left floating.
OUTP0 OUTN0	9, 10	Output	Differential LVPECL output pair no. 0. Unused output pair can be left floating.
V_{AC_REF}	8	Output	Bias voltage output for capacitive-coupled input pair no. 0. Do not use V_{AC_REF} at V_{CC} < 3.0 V. If used, it is recommended to use a 0.1-µF capacitor to GND on this pin. The output current is limited to 2 mA.
V_{CC}	5	Power	2.5-V/3.3-V supply for the device
NC	2, 3, 4, 13, 14, 15	—	Do not connect

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
V_{CC}	Supply voltage range(2)	–0.5	4.6	V
V_{IN}	Input voltage range (3)	–0.5	V_{CC} + 0.5	V
V_{OUT}	Output voltage range (3)	–0.5	V_{CC} + 0.5	V
I_{IN}	Input current		20	mA
I_{OUT}	Output current		50	mA
T_A	Specified free-air temperature (no airflow)	–40	85	°C
T_J	Maximum junction temperature		125	°C
T_{stg}	Storage temperature	–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All supply voltages must be supplied simultaneously.
(3) The input and output negative voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	2.375	2.50/3.30	3.60	V
T_A	Ambient temperature	–40		85	°C
T_{PCB}	PCB temperature (measured at thermal pad)			105	°C

6.4 Thermal Information

THERMAL METRIC(1)(2)(3)			CDCLVP1102 RGT (VQFN) 16 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	0 LFM(4)	51.8	°C/W
		150 LFM(4)	45	
		400 LFM(4)	40.8	
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance		61.3	°C/W
$R_{\theta JB}$(5)	Junction-to-board thermal resistance		21.7	°C/W
ψ_{JT}	Junction-to-top characterization parameter		1.5	°C/W
ψ_{JB}	Junction-to-board characterization parameter		21.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance		6.3	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report (SPRA953).
(2) The package thermal resistance is calculated in accordance with JESD 51 and JEDEC 2S2P (high-K board).
(3) Connected to GND with four thermal vias (0.3-mm diameter).
(4) 2 x 2 vias on Pad
(5) θ_{JP} (junction-to-pad) is used for the QFN package, because the primary heat flow is from the junction to the GND pad of the QFN package.

6.5 Electrical Characteristics: LVCMOS Input

at V_{CC} = 2.375 V to 3.6 V and T_A = –40°C to 85°C and T_{PCB} ≤ 105°C (unless otherwise noted)(1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
f_{IN}	Input frequency				200	MHz
V_{th}	Input threshold voltage	External threshold voltage applied to complementary input	1.1		1.8	V
V_{IH}	Input high voltage		V_{th} + 0.1		V_{CC}	V
V_{IL}	Input low voltage		0		V_{th} – 0.1	V
I_{IH}	Input high current	V_{CC} = 3.6 V, V_{IH} = 3.6 V			40	µA
I_{IL}	Input low current	V_{CC} = 3.6 V, V_{IL} = 0 V			–40	µA
ΔV/ΔT	Input edge rate	20% to 80%	1.5			V/ns
I_{CAP}	Input capacitance			5		pF

(1) Figure 3 and Figure 4 show DC test setup.

6.6 Electrical Characteristics: Differential Input

at V_{CC} = 2.375 V to 3.6 V and T_A = –40°C to 85°C and T_{PCB} ≤ 105°C (unless otherwise noted)(1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
f_{IN}	Input frequency	Clock input			2000	MHz
$V_{IN, DIFF, PP}$	Differential input peak-peak voltage	f_{IN} ≤ 1.5 GHz	0.1		1.5	V
		1.5 GHz ≤ f_{IN} ≤ 2 GHz	0.2		1.5	V
V_{ICM}	Input common-mode level		1		V_{CC} – 0.3	V
I_{IH}	Input high current	V_{CC} = 3.6 V, V_{IH} = 3.6 V			40	µA
I_{IL}	Input low current	V_{CC} = 3.6 V, V_{IL} = 0 V			–40	µA
ΔV/ΔT	Input edge rate	20% to 80%	1.5			V/ns
I_{CAP}	Input capacitance			5		pF

(1) Figure 5 and Figure 6 show DC test setup. Figure 7 shows AC test setup.

6.7 Electrical Characteristics: LVPECL Output

at V_{CC} = 2.375 V to 2.625 V and T_A = –40°C to 85°C and T_{PCB} ≤ 105°C (unless otherwise noted)(1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	Output high voltage	T_A ≤ 85ºC	V_{CC} – 1.26		V_{CC} – 0.9	V
		T_{PCB} ≤ 105ºC	V_{CC} – 1.26		V_{CC} – 0.83	V
V_{OL}	Output low voltage	T_A ≤ 85ºC	V_{CC} – 1.7		V_{CC} – 1.3	V
		T_{PCB} ≤ 105ºC	V_{CC} – 1.7		V_{CC} – 1.25	V
$V_{OUT, DIFF, PP}$	Differential output peak-peak voltage	f_{IN} ≤ 2 GHz	0.5		1.35	V
V_{AC_REF}	Input bias voltage(2)	I_{AC_REF} = 2 mA	V_{CC} – 1.6		V_{CC} – 1.1	V
t_{PD}	Propagation delay	$V_{IN, DIFF, PP}$ = 0.1 V			450	ps
		$V_{IN, DIFF, PP}$ = 0.3 V			450	ps
$t_{SK,PP}$	Part-to-part skew				100	ps
$t_{SK,O}$	Output skew				10	ps
$t_{SK,P}$	Pulse skew (with 50% duty cycle input)	Crossing-point-to-crossing-point distortion, f_{OUT} = 100 MHz	–50		50	ps
t_{RJIT}	Random additive jitter (with 50% duty cycle input)	f_{OUT} = 100 MHz, $V_{IN,SE}$ = V_{CC}, V_{th} = 1.25 V, 10 kHz to 20 MHz		0.089		ps, RMS
		f_{OUT} = 100 MHz, $V_{IN,SE}$ = 0.9 V, V_{th} = 1.1 V, 10 kHz to 20 MHz		0.093		ps, RMS
		f_{OUT} = 2 GHz, $V_{IN,DIFF,PP}$ = 0.2 V, V_{ICM} = 1 V, 10 kHz to 20 MHz		0.037		ps, RMS
		f_{OUT} = 100 MHz, $V_{IN,DIFF,PP}$ = 0.15 V, V_{ICM} = 1 V, 10 kHz to 20 MHz		0.094		ps, RMS
		f_{OUT} = 100 MHz, $V_{IN,DIFF,PP}$ = 1 V, V_{ICM} = 1 V, 10 kHz to 20 MHz		0.091		ps, RMS
t_R/t_F	Output rise/fall time	20% to 80%			200	ps
I_{EE}	Supply internal current	Outputs unterminated, T_A ≤ 85ºC			33	mA
		Outputs unterminated, T_{PCB} ≤ 105ºC			34	mA
I_{CC}	Output and internal supply current	All outputs terminated, 50 Ω to V_{CC} – 2, T_A ≤ 85ºC			100	mA
		All outputs terminated, 50 Ω to V_{CC} – 2, T_{PCB} ≤ 105ºC			105	mA

(1) Figure 8 and Figure 9 show DC and AC test setup.
(2) Internally generated bias voltage (V_{AC_REF}) is for 3.3-V operation only. It is recommended to apply externally generated bias voltage for V_{CC} < 3.0 V.

6.8 Electrical Characteristics: LVPECL Output

at V_{CC} = 3.0 V to 3.6 V and T_A = –40°C to 85°C and T_{PCB} ≤ 105°C (unless otherwise noted)(1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	Output high voltage	T_A ≤ 85ºC	V_{CC} – 1.26		V_{CC} – 0.9	V
		T_{PCB} ≤ 105ºC	V_{CC} – 1.26		V_{CC} – 0.85	V
V_{OL}	Output low voltage	T_A ≤ 85ºC	V_{CC} – 1.7		V_{CC} – 1.3	V
		T_{PCB} ≤ 105ºC	V_{CC} – 1.7		V_{CC} – 1.3	V
$V_{OUT, DIFF, PP}$	Differential output peak-peak voltage	f_{IN} ≤ 2 GHz	0.65		1.35	V
V_{AC_REF}	Input bias voltage	I_{AC_REF} = 2 mA	V_{CC} – 1.6		V_{CC} – 1.1	V

Figure 10 shows the output voltage and rise/fall time. Output and part-to-part skew are shown in Figure 11.

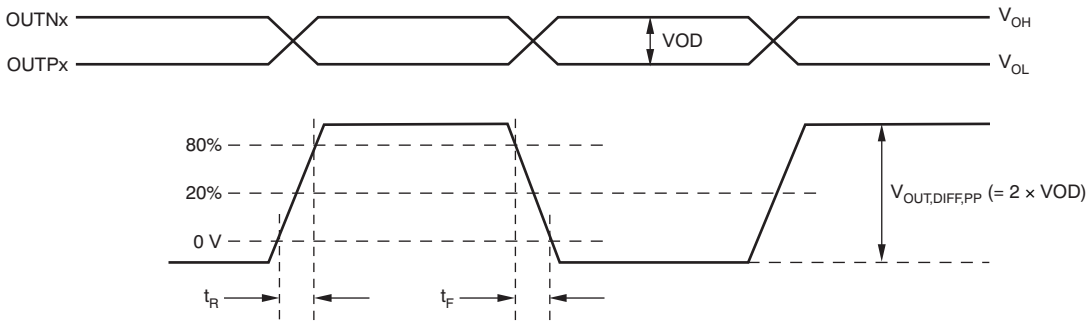

Figure 10. Output Voltage and Rise/Fall Time

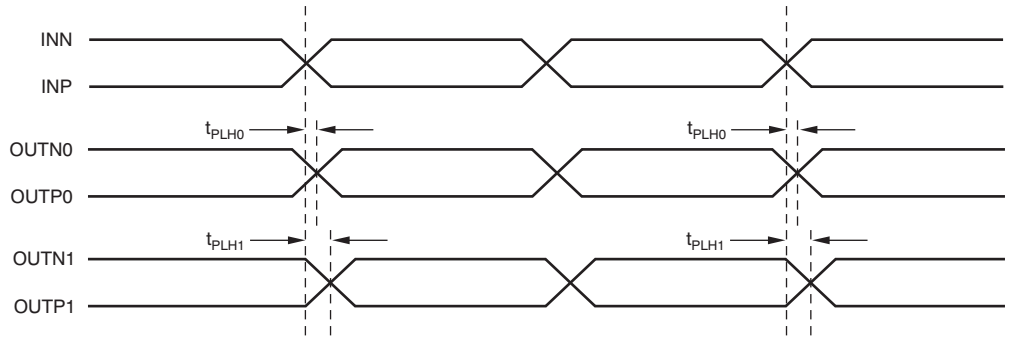


(1) Output skew is calculated as the greater of the following: As the difference between the fastest and the slowest t_{PLHn} (n = 0, 1), or as the difference between the fastest and the slowest t_{PHLn} (n = 0, 1).

(2) Part-to-part skew is calculated as the greater of the following: As the difference between the fastest and the slowest t_{PLHn} (n = 0, 1) across multiple devices, or the difference between the fastest and the slowest t_{PHLn} (n = 0, 1) across multiple devices.

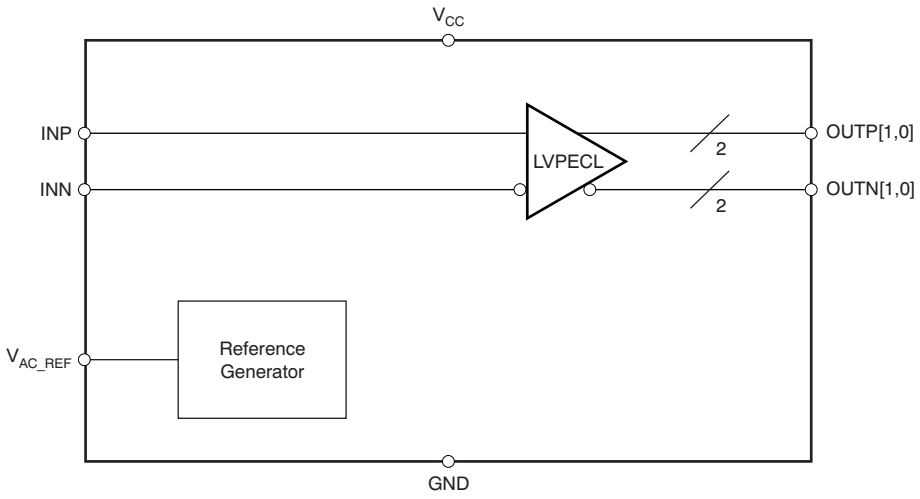
Figure 11. Output and Part-to-Part Skew

8 Detailed Description

8.1 Overview

The CDCLVP1102 is an open emitter for LVPECL outputs. Therefore, proper biasing and termination are required to ensure correct operation of the device and to minimize signal integrity. The proper termination for LVPECL outputs is 50 Ω to (V_{CC} –2) V, but this DC voltage is not readily available on PCB. Therefore, a Thevenin equivalent circuit is worked out for the LVPECL termination in both direct-coupled (DC) and AC coupled configurations. These configurations are shown in Figure 12 for V_{CC} = 2.5 V and Figure 13 for V_{CC} = 3.3 V, respectively. It is recommended to place all resistive components close to either the driver end or the receiver end. If the supply voltage for the driver and receiver is different, AC coupling is required.

8.2 Functional Block Diagram



8.3 Feature Description

The CDCLVP1102 is a low additive jitter universal to LVPECL fan out buffer with 2 outputs and 1 input. The small package, low output skew, and low additive jitter make for a flexible device in demanding applications.

8.4 Device Functional Modes

The CDCLVP1102 is an open emitter for LVPECL outputs. Therefore, proper biasing and termination are required to ensure correct operation of the device and to minimize signal integrity. The proper termination for LVPECL outputs is 50 Ω to (V_{CC} –2) V, but this dc voltage is not readily available on PCB. Therefore, a Thevenin equivalent circuit is worked out for the LVPECL termination in both direct-coupled (DC) and AC-coupled configurations. These configurations are shown in Figure 12a and b for V_{CC} = 2.5 V and Figure 13a and b for V_{CC} = 3.3 V, respectively. It is recommended to place all resistive components close to either the driver end or the receiver end. If the supply voltage for the driver and receiver is different, ac coupling is required.

Device Functional Modes (continued)

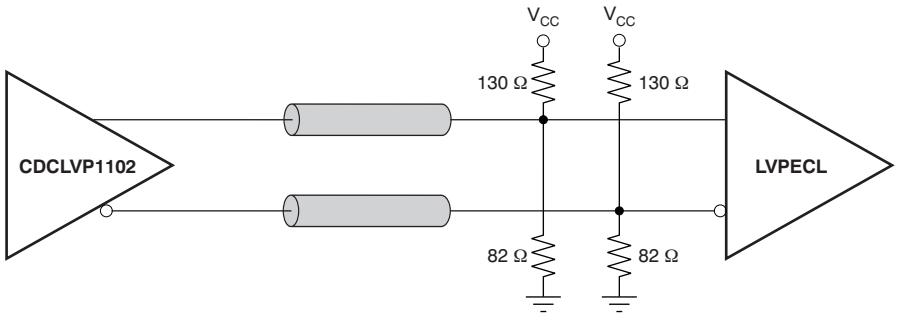
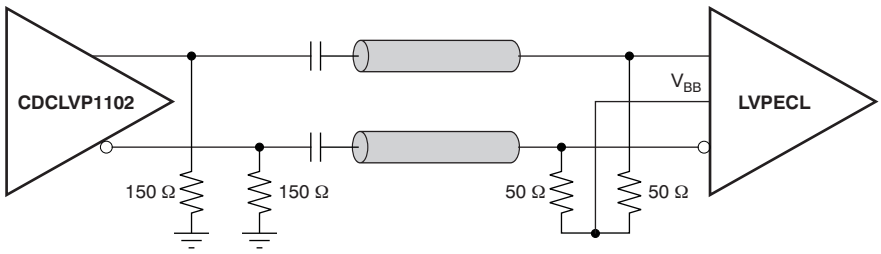
Device Functional Modes (continued)



(a) Output DC Termination



(b) Output AC Termination

Figure 13. LVPECL Output DC and AC Termination for V_{CC} = 3.3 V

8.4.2 Input Termination

The CDCLVP1102 inputs can be interfaced with LVPECL, LVDS, or LVCMOS drivers. Figure 14 illustrates how to dc couple an LVCMOS input to the CDCLVP1102. The series resistance (R_S) should be placed close to the LVCMOS driver; its value is calculated as the difference between the transmission line impedance and the driver output impedance.

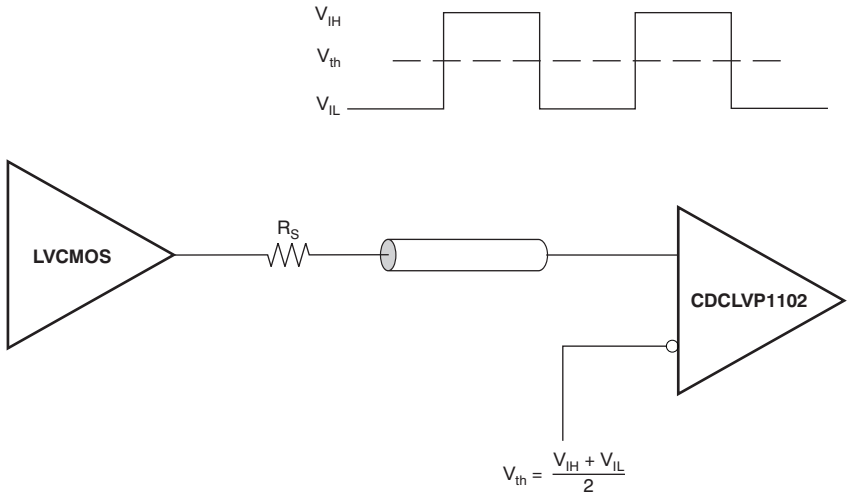


Figure 14. DC-Coupled LVCMOS Input to CDCLVP1102

Figure 15 shows how to dc couple LVDS inputs to the CDCLVP1102. Figure 16 and Figure 17 describe the method of dc coupling LVPECL inputs to the CDCLVP1102 for V_{CC} = 2.5 V and V_{CC} = 3.3 V, respectively.

Device Functional Modes (continued)

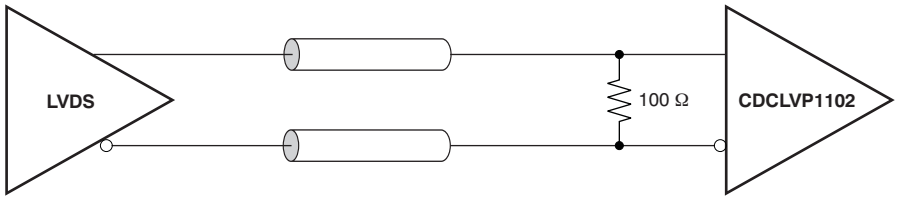

Figure 15. DC-Coupled LVDS Inputs to CDCLVP1102

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The CDCLVP1102 is a low additive jitter LVPECL fanout buffer that can generate two copies of a LVPECL, LVDS, or LVCMOS input. The CDCLVP1102 can accept reference clock frequencies up to 2 GHz while providing low output skew.

9.2 Typical Application

9.2.1 Fanout Buffer for Line Card Application

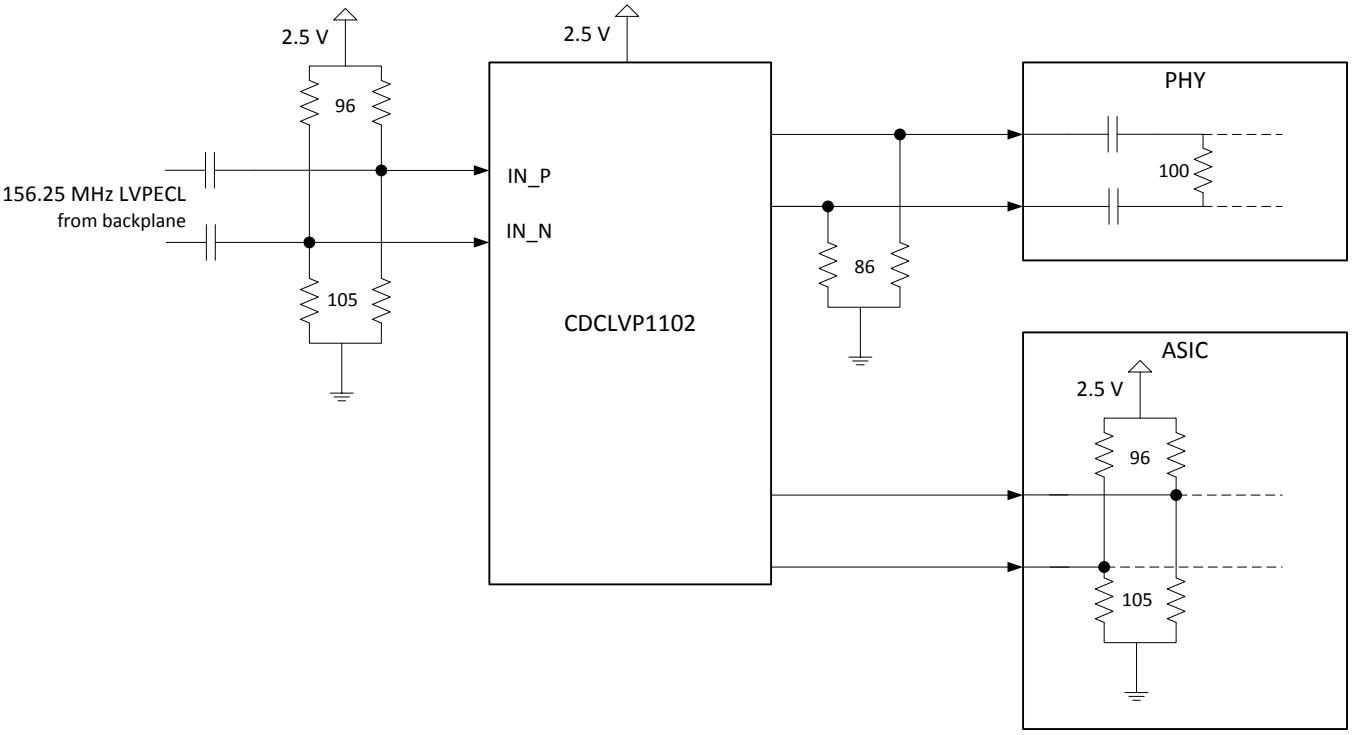

Figure 20. CDCLVP1102 Typical Application

9.2.1.1 Design Requirements

The CDCLVP1102 shown in Figure 20 is configured to receive a 156.25-MHz LVPECL clock from the backplane. Either signal can be then fanned out to desired devices, as shown. The configuration example is driving 2 LVPECL receivers in a line card application with the following properties:

- The PHY device has internal AC coupling and appropriate termination and biasing. The CDCLVP1102 will need to be provided with 86-Ω emitter resistors near the driver for proper operation.
- The ASIC is capable of DC coupling with a 2.5-V LVPECL driver such as the CDCLVP1102. This ASIC features internal termination so no additional components are needed.

Typical Application (continued)

9.2.1.2 Detailed Design Procedure

Refer to *Input Termination* for proper input terminations, dependent on single ended or differential inputs.

Refer to *LVPECL Output Termination* for output termination schemes depending on the receiver application. Unused outputs can be left floating.

In this example, the PHY, ASIC, and FPGA/CPU require different schemes. Power supply filtering and bypassing is critical for low noise applications.

See *Power Supply Recommendations* for recommended filtering techniques. A reference layout is provided on the CDCLVP1102 Evaluation Module at SCAU035.

9.2.1.3 Application Curves

The CDCLVP1102's low additive noise can be shown in this line card application. The low noise 156.25 MHz XO with 32-fs RMS jitter drives the CDCLVP1102, resulting in 57-fs RMS when integrated from 10 kHz to 20 MHz. The resultant additive jitter is a low 47-fs RMS for this configuration.

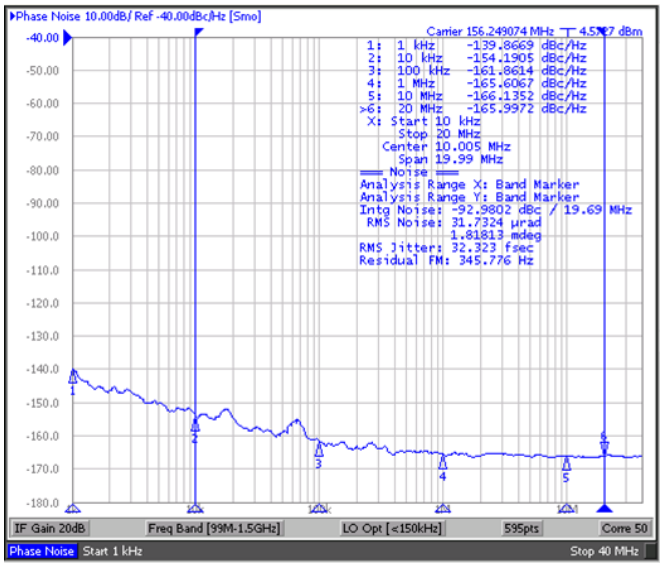

Figure 21. CDCLVP1102 Reference Phase Noise 32 fs rms (10 kHz to 20 MHz)

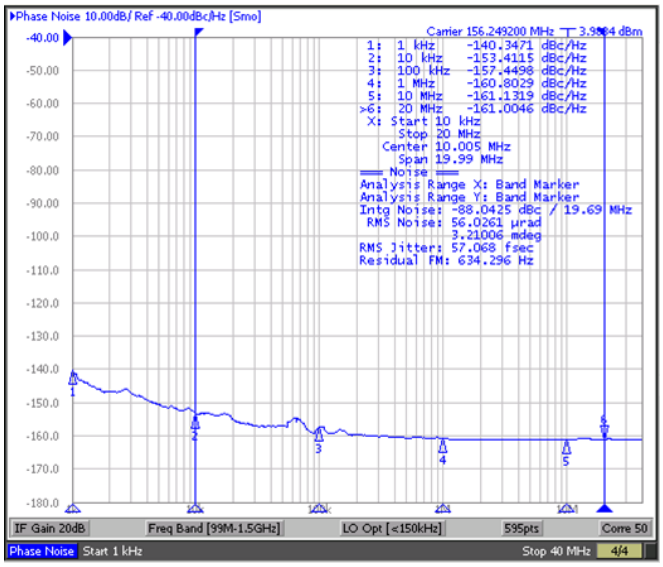

Figure 22. CDCLVP1102 Output Phase Noise 57 fs rms (10 kHz to 20 MHz)

10 Power Supply Recommendations

High-performance clock buffers are sensitive to noise on the power supply, which can dramatically increase the additive jitter of the buffer. Thus, it is essential to reduce noise from the system power supply, especially when jitter/phase noise is very critical to applications.

Filter capacitors are used to eliminate the low-frequency noise from the power supply, where the bypass capacitors provide the very low impedance path for high-frequency noise and guard the power-supply system against the induced fluctuations. These bypass capacitors also provide instantaneous current surges as required by the device and should have low equivalent series resistance (ESR). To properly use the bypass capacitors, they must be placed very close to the power-supply pins and laid out with short loops to minimize inductance. It is recommended to add as many high-frequency (for example, 0.1-µF) bypass capacitors as there are supply pins in the package. It is recommended, but not required, to insert a ferrite bead between the board power supply and the chip power supply that isolates the high-frequency switching noises generated by the clock driver; these beads prevent the switching noise from leaking into the board supply. Choose an appropriate ferrite bead with very low dc resistance because it is imperative to provide adequate isolation between the board supply and the chip supply, as well as to maintain a voltage at the supply pins that is greater than the minimum voltage required for proper operation.

Figure 23 illustrates this recommended power-supply decoupling method.

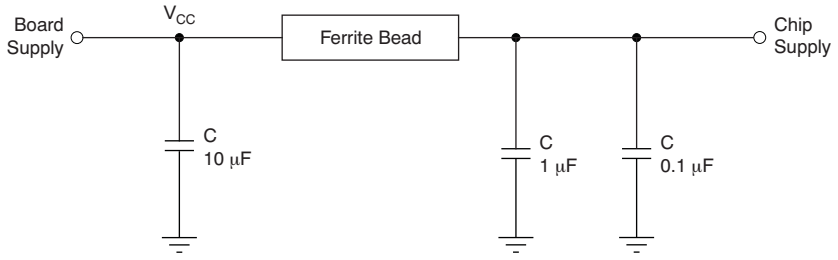

Figure 23. Power-Supply Decoupling

11 Layout

11.1 Layout Guidelines

Power consumption of the CDCLVP1102 can be high enough to require attention to thermal management. For reliability and performance reasons, the die temperature should be limited to a maximum of 125°C. That is, as an estimate, ambient temperature (T_A) plus device power consumption times $R_{\theta JA}$ should not exceed 125°C.

The device package has an exposed pad that provides the primary heat removal path to the printed circuit board (PCB). To maximize the heat dissipation from the package, a thermal landing pattern including multiple vias to a ground plane must be incorporated into the PCB within the footprint of the package. The exposed pad must be soldered down to ensure adequate heat conduction out of the package. Figure 24 shows a recommended land and via pattern.

11.2 Layout Example

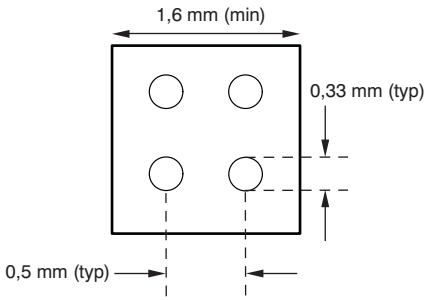

Figure 24. Recommended PCB Layout

11.3 Thermal Considerations

The CDCLVP1102 supports high temperatures on the printed circuit board (PCB) measured at the thermal pad. The system designer needs to ensure that the maximum junction temperature is not exceeded. Ψ_{jb} can allow the system designer to measure the board temperature with a fine gauge thermocouple and back calculate the junction temperature using Equation 1. Note that Ψ_{jb} is close to $R_{\theta JB}$ as 75 to 95% of a device's heat is dissipated by the PCB. Further information can be found at SPRA953 and SLUA566.

$$T_{junction} = T_{PCB} + (\Psi_{jb} \times Power) \quad (1)$$

Example:

Calculation of the junction-lead temperature with a 4-layer JEDEC test board using four thermal vias:

T_{PCB} = 105 °C

Ψ_{jb} = 21.7 °C/W

$Power_{inclTerm} = I_{max} \times V_{max}$ = 105 mA × 3.6 V = 378 mW (max power consumption including termination resistors)

$Power_{exclTerm}$ = 302.5 mW (max power consumption excluding termination resistors, see SLYT127 for further details)

$\Delta T_{Junction} = \Psi_{jb} \times Power_{exclTerm}$ = 21.7 °C/W × 302.5 mW = 6.56 °C

$T_{Junction} = \Delta T_{Junction} + T_{Chassis}$ = 6.56 °C + 105 °C = 111.56 °C (the maximum junction temperature of 125 °C is not violated)

12 Device and Documentation Support

12.1 Documentation Support

12.1.1 Related Documentation

- *Power Consumption of LVPECL and LVDS* (SLYT127)

12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community ***TI's Engineer-to-Engineer (E2E) Community.*** Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support ***TI's Design Support*** Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package | Pins	Package qty | Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
CDCLVP1102RGTR	Active	Production	VQFN (RGT) | 16	3000 | LARGE T&R	Yes	Call TI | Nipdau	Level-2-260C-1 YEAR	-40 to 85	1102
CDCLVP1102RGTR.B	Active	Production	VQFN (RGT) | 16	3000 | LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	1102
CDCLVP1102RGTT	Active	Production	VQFN (RGT) | 16	250 | SMALL T&R	Yes	Call TI | Nipdau	Level-2-260C-1 YEAR	-40 to 85	1102
CDCLVP1102RGTT.B	Active	Production	VQFN (RGT) | 16	250 | SMALL T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	1102
CDCLVP1102RGTTG4	Active	Production	VQFN (RGT) | 16	250 | SMALL T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	1102
CDCLVP1102RGTTG4.B	Active	Production	VQFN (RGT) | 16	250 | SMALL T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	1102

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

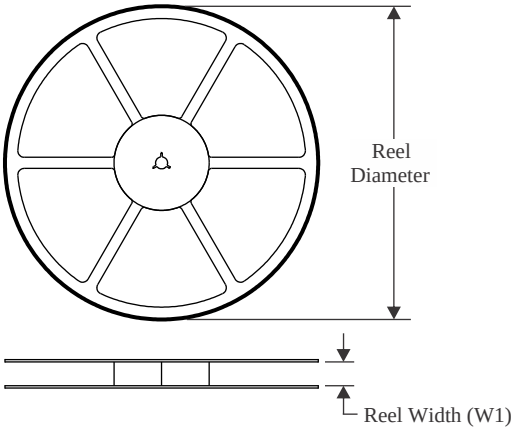
(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

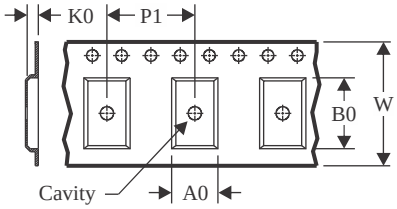
Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

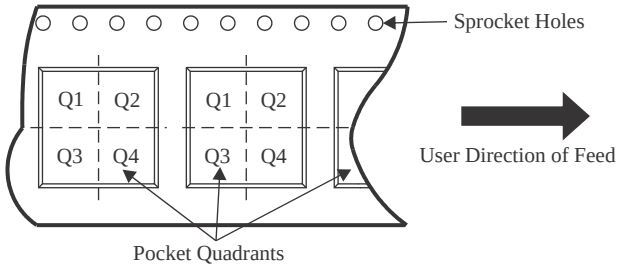


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

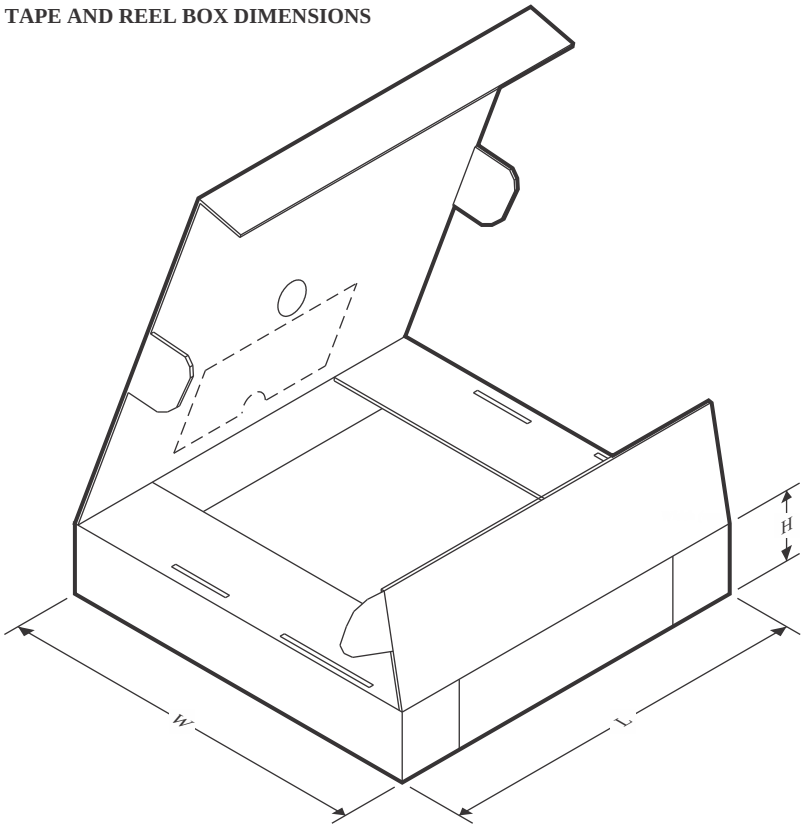
QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
CDCLVP1102RGTTG4	VQFN	RGT	16	250	180.0	12.4	3.3	3.3	1.1	8.0	12.0	Q2

TAPE AND REEL BOX DIMENSIONS

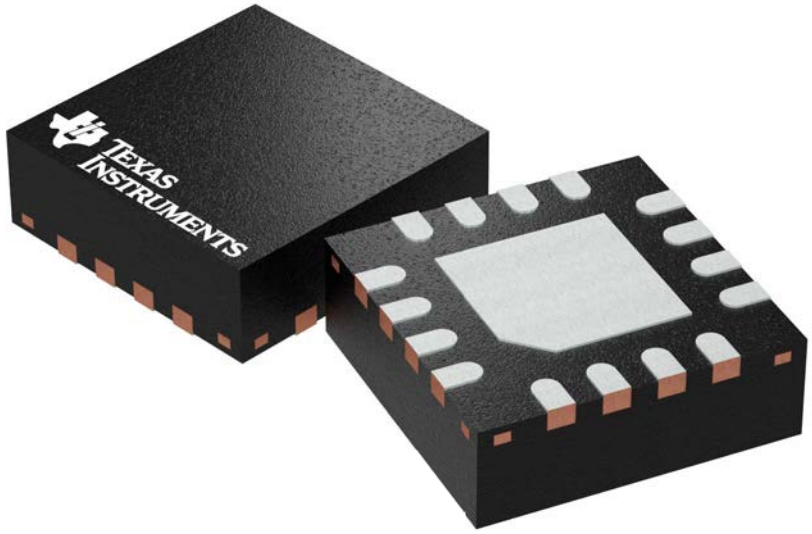


*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
CDCLVP1102RGTTG4	VQFN	RGT	16	250	210.0	185.0	35.0

RGT 16 VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD



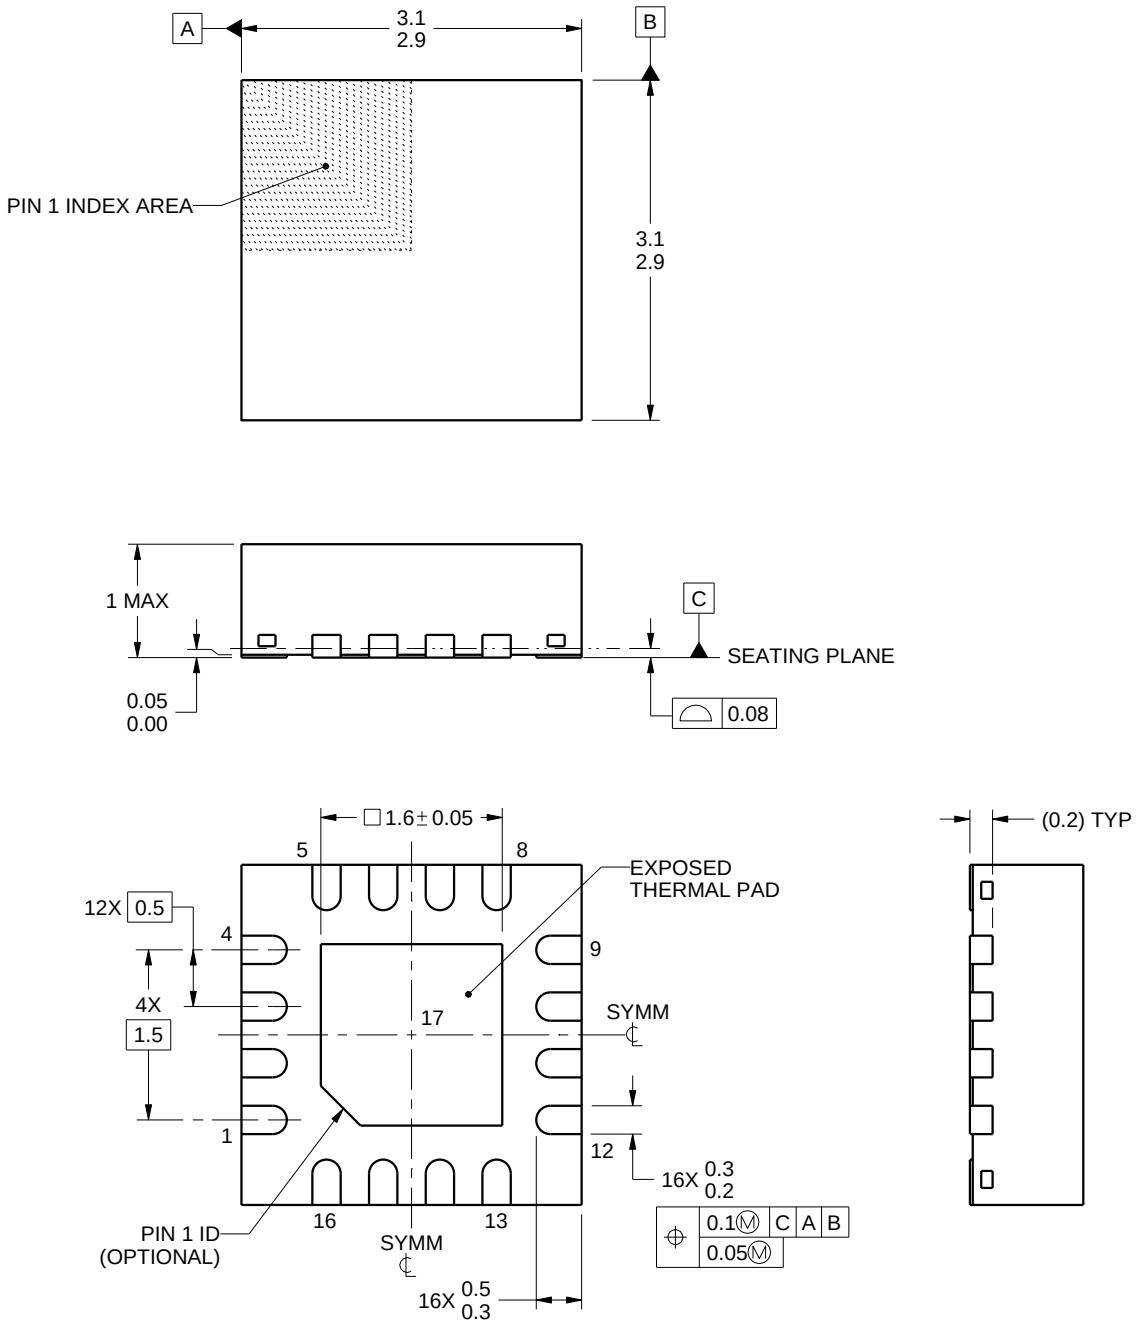
Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

PACKAGE OUTLINE

RGT0016B

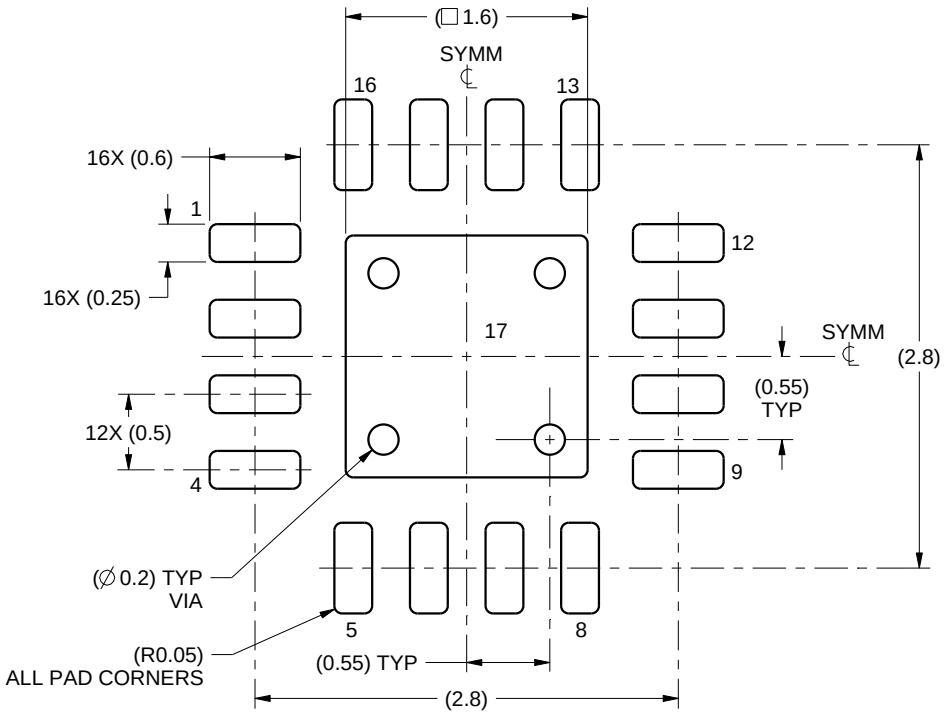
VQFN - 1 mm max height

PLASTIC QUAD FLATPACK - NO LEAD



NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.



LAND PATTERN EXAMPLE

SOLDER MASK DETAILS

4219033/A 08/2016

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
