

# HD3SS215 6.0 Gbps HDMI DisplayPort 2:1/1:2 Differential Switch

### 1 Features

- General purpose 2:1/1:2 differential switch
- Compatible with displayport electrical standard
- Compatible with hdmi electrical standards
- 2:1 and 1:2 switching supporting data rates up to 6
- Supports HPD switching
- Supports AUX and DDC switching
- Wide -3-dB differential bandwidth of 7 GHz
- Excellent dynamic characteristics (at 3 GHz)
  - Crosstalk = -35 dB
  - Isolation = –21 dB
  - Insertion Loss = -1.6 dB
  - Return Loss = -12 dB
  - Max Bit-Bit Skew = 5 ps
- VDD operating range 3.3 V ±10%
- Commercial temperature range: 0°C to 70°C (HD3SS215)
- Industrial temperature range: -40°C to 85°C (HD3SS215I)
- Package options:
  - 5 mm x 5 mm, 50-ball ZXH
  - 8 mm × 8 mm, 56-pin RTQ
- Output enable (OE) pin disables switch to save power
- Power consumption:
  - Active < 9 mW typical</li>
  - Standby < 30 μW maximum (when OE = L)</li>

### 2 Applications

- **Desktop and Notebook Applications:** 
  - PCI Express Gen 1, Gen 2 Switching
  - DP Switching
  - HDMI Switching
  - LVDS Switching
- Connected peripherals & printers
- Home theater & entertainment
- TV
- Gaming
- Pro audio, video & signage

## 3 Description

HD3SS215 is a high-speed wide common mode passive switch capable of supporting DisplayPort HBR2 and high definition multimedia interface (HDMI) applications requiring 4k2k 60Hz refresh rates. The HD3SS215 can be configured to support two sources to one sink or one source to two sinks. To support these video standards the HD3SS215 also switches the display data channel (DDC) and hot plug detect (HPD) signals for HDMI or digital video interface (DVI) applications. It also switches the auxiliary (AUX) and hot plug detect (HPD) signals for DisplayPort applications. The flexibility the HD3SS215 provides by supporting both wide common mode and AC or DC coupled links makes it ideal for many applications.

### Device Information (1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
HD3SS215,	nFBGA (50)	5.00 mm x 5.00 mm
HD3SS215I	QFN (56)	8.00 mm × 8.00 mm

For all available packages, see the orderable addendum at the end of the datasheet.

•	Changed Section 1 list item From: Compatible With DisplayPort 1.2a Electrical Standard To: Compatible	
	DisplayPort Electrical Standard	1
•	Changed Section 1 list item From: Compatible With HDMI 1.4b and HDMI 2.0 Electrical Standards To: Compatible With HDMI Electrical Standards	1
	Added Section 1 item: Commercial Temperature Range: –40°C to 70°C (HD3SS215)	
•	Added Section 1 item: Inductrial Temperature Range: –40°C to 85°C (HD3SS215I)	
•	Added Section 1, Package Options: 8 mm × 8 mm, 56-Pin RTQ	
•	Changed the Section 2 list item From: TV and Monitors To: UHDTV, HDTV and Monitors	
•	Added Section 5 paragraph.	
•	Added the 56-Pin QFN image	
•	Added RTQ column to the Pin Functions table	
•	Added RTQ column to the Pin Functions table	<mark>7</mark>
•	Moved T <sub>stq</sub> From: Section 7.2 To: Section 7.1	9
•	Changed the Handling Ratings table to Section 7.2 table	
•	Added HD3SS2151I, Operating free-air temperature Section 7.3	
•	Added RTQ 56 PIN values to the Section 7.4	9
•	Added table Note " This pin can be driven" to the Section 7.5 table	10
•	Changed the Section 7.6 table to include ZQE and RTQ package values	11
•	Added the Section 7.7 table	11
•	Added section: Section 9.2.4	20
•	Added Figure 10-3	22
C	hanges from Revision * (May 2014) to Revision A (May 2014)	Page
	Changed Section 3 section	1
•	Changed Figure 9-1	16

# 5 Description (continued)

One typical application would be a mother board that includes two GPUs that need to drive one DisplayPort sink. The GPU is selected by the Dx\_SEL pin. Another application is when one source needs to switch between one of two sinks, such as a side connector an a docking station connector. The switching is controlled using the Dx\_SEL and AUX\_SEL pins. The HD3SS215I operates from a single supply voltage of 3.3 V, over full industrial temperature range –40°C to 85°C, in the ZXH package and 56 pin RTQ package.

# 7 Specifications

# 7.1 Absolute Maximum Ratings (1) (2)

over operating free-air temperature range (unless otherwise noted)

		VA	LUE	UNIT
		MIN	MAX	UNII
Supply voltage	$V_{DD}$	-0.5	4	V
	Differential I/O	-0.5	4	
Voltage	AUX_SEL, Dx_SEL	-0.5	4	V
	HPDx, DDCCLK_X, DDCDAT_X	-0.5	6	
T <sub>stg</sub>	Storage temperature	-65	150	°C

<sup>(1)</sup> Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 7.2 ESD Ratings

			VALUE	UNIT
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±1500	V
V <sub>(ESD)</sub>	Electrostatic discharge	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1250	V

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

## 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
$V_{DD}$	Main power supply		3	3.3	3.6	V
_	Operating free air temperature	HD3SS215	0		70	°C
T <sub>A</sub>	Operating free-air temperature	HD3SS215I	-40		85	°C
C <sub>AC</sub>	AC coupling capacitor		75	100	200	nF

### 7.4 Thermal Information

	THERMAL METRIC <sup>(1)</sup>	HD3S	UNIT	
	THERMAL WETRICKY	RTQ (56 PIN)	ZXH (50 PIN)	UNII
$R_{\theta JA}$	Junction-to-ambient thermal resistance	90.5	69.9	°C/W
R <sub>0JC(top)</sub>	Junction-to-case (top) thermal resistance	41.9	35.1	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	53.9	40.4	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	1.8	1.6	°C/W
ΨЈВ	Junction-to-board characterization parameter	53.4	40.2	°C/W

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

<sup>(2)</sup> All voltage values, except differential voltages, are with respect to network ground pin.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

# 7.5 Electrical Characteristics

Typical values for all parameters are at  $V_{DD}$  = 3.3 V and  $T_A$  = 25°C. All temperature limits are specified by design.

Typical va	<u> </u>	0.0 V drid TA = 20 0.7 til temperatar		T T

# 8 Detailed Description

### 8.1 Overview

The HD3SS215 is a generic analog, differential passive switch that can work for any high speed interface applications, as long as it is biased at a common mode voltage range of 0 V to 3.3 V and has differential signaling with differential amplitude up to 1800 mV<sub>pp</sub>. It employs adaptive tracking that maintains the high speed channel impedance over the entire common mode voltage range. In high-speed applications and data paths, signal integrity is an important concern. The switch offers excellent dynamic performance such as high isolation, crosstalk immunity, and minimal bit-bit skew. These characteristics allow the device to function seamlessly in the system without compromising signal integrity. The 2:1/1:2, mux/de-mux device operates with ports A or B switched to port C, or port C switched to either port A or B. This flexibility allows an application to select between one of two Sources on ports A and B and send the output to the sink on port C. Similarly, a Source on port C can select between one of two Sink devices on ports A and B to send the data. To comply with DisplayPort, DP++ and HDMI applications, the HD3SS215 also switches AUX, HPD, and DDC along with the high-speed differential signals. The HPD and data signals are both switched through the Dx\_SEL pin. AUX and DDC are controlled with AUX SEL and Dx SEL. The Functional Modes section contains information on how to set the control pins.

With an OE control pin, the HD3SS215 is operational, with low active current, when this pin is high. When OE is pulled lowed, the device goes into standby mode and draws very little current in order to save power consumption in the application.

## 8.2 Functional Block Diagram

The high speed data ports incorporate  $20k\Omega$  pull down resistors that are switched in when a port is not selected and switched out when the port is selected.

Figure 8-1. Functional Block Diagram

### 8.3 Feature Description

### 8.3.1 High Speed Switching

The HD3SS215 supports switching of 6 Gbps data rates. The wide common mode of the device enables it to support TMDS signal levels and DisplayPort signals. The high speed muxing is designed with a wide -3dB differential bandwidth of 7 GHz and industry leading dynamic characteristics. All of these attributes help maintain signal integrity in the application. Each high speed port incorporates  $20k\Omega$  pull down resistors that are switched in when the port is not selected and switched out when the port is selected.

### 8.3.2 HPD, AUX, and DDC Switching

HPD, AUX and DDC switching is supported through the HD3SS215. This enables the device to work in multiple application scenarios within multiple electrical standards. The AUXA/B and DDCA/B lines can both be switched to the AUXC port. This feature supports DP++ or AUX only adapters. For HDMI applications, the DDC channels are switched to the DDC C port only and the AUX channel can remain active or the end user can make it float.

### 8.3.3 Output Enable and Power Savings

The HD3SS215 has two power modes, active/normal operating mode, and standby mode. During standby mode, the device consumes very little current to save the maximum power. To enter standby mode, the OE control pin is pulled low and must remain low. For active/normal operation, the OE control pin should be pulled high to VDD through a resistor.

### 8.4 Device Functional Modes

#### 8.4.1 Switch Control Modes

Refer to the Section 8.2.

The HD3SS215 behaves as a two to one or one to two differential switch using high bandwidth pass gates. The input ports are selected using the AUX\_SEL pin and Dx\_SEL pin which are shown in Table 8-1.

CONTROL	LINES(4)		SWITCHED I/O PINS										
AUX_SEL	Dx_SEL	DCz(p) Pin z = 0, 1, 2 or 3	DCz(n) Pin z = 0, 1, 2 or 3	HPDC Pin	AUXA	AUXB	AUXC	DDCA	DDCB	DDCC			
L	L	DAz(p)	DAz(n)	HPDA	To/From AUXC	Z	To/From AUXA	Z	Z	Z			
L	Н	DBz(p)	DBz(n)	HPDB	Z	To/From AUXC	To/From AUXB	Z	Z	Z			
Н	L	DAz(p)	DAz(n)	HPDA	Z	Z	To/From DDCA	To/From AUXC	Z	Z			
Н	Н	DBz(p)	DBz(n)	HPDB	Z	Z	To/From DDCB	Z	To/From AUXC	Z			
M <sup>(4)</sup>	L	DAz(p)	DAz(n)	HPDA	To/From AUXC	Z	To/From AUXA	To/From DDCC	Z	To/From DDCA			
M <sup>(4)</sup>	Н	DBz(p)	DBz(n)	HPDB	Z	To/From AUXC	To/From AUXB	Z	To/From DDCC	To/From DDCB			

Table 8-1. Switch Control Logic (1) (2) (3)

- (1) Z = High Impedance
- (2) OE pin For normal operation, drive OE high. Driving the OE pin low will disable the switch.
- (3) The ports which are not selected by the control lines will be in high impedance status.
- (4) For HDMI application, keep the AUX\_SEL at middle level voltage. The AUX channel is still active, and the end user can make the lines float.

# 9 Applications and Implementation

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## 9.1 Application Information

The HD3SS215 can be used in a variety of applications. This section shows the typical applications for DisplayPort, DP++, and HDMI. The example diagrams illustrate using the HD3SS215 in a two source to one sink application and a one source to two sinks application. All schematics are using the ZXH pin-out.

# 9.2 Typical Applications

### 9.2.1 DisplayPort and Dual Mode Adapter with Two Sources

The application schematic below shows the HD3SS215 in the 2:1 configuration for DisplayPort switching. The HD3SS215 receives inputs from DP Source A and DP Source B. The control pins of the device can be set to select Source A/B inputs and transfer them to port C through the Dx\_SEL control pin. The schematic also shows the CONFIG1 and AUX\_SEL settings to configure the HD3SS215 to work with DP++ Type 2 and Type1 adapters. For this specific schematic, the AC capacitors needed on the MainLink signal lines are shown on the Sink side of the HD3SS215. This is done to decrease the BOM. If desired the AC capacitors maybe placed in the signal path on the Source A/B side of HD3SS215. Additional diagrams are provided to show the configuration of the AUX channel for 2:1 and 1:2 DisplayPort only applications.

Figure 9-1. HD3SS215 Application Diagram for DisplayPort or Dual Mode Adapter Configuration

Figure 9-2. HD3SS215 AUX Channel in 2:1 DisplayPort Application

Figure 9-3. HD3SS215 AUX Channel in 1:2 DisplayPort Application

### 9.2.1.1 Design Requirements

Table 9-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE				
VDD	3.3 V				
Decoupling Capacitors	0.1 μF				
AC Capacitors	75 nF to 200 nF (100 nF shown)				
AUX Pull-Up/Pull-Down Resistors	10 kΩ to105 kΩ (100 kΩ shown)				
Pull-Up/Pull-Down Resistors for Control Pins	10 kΩ				
CONFIG1/CONFIG2 Pull-Down Resistors	1 M $\Omega$ and 5 M $\Omega$				

### 9.2.1.2 Detailed Design Procedure

The HD3SS215 is designed to operate with a 3.3 V power supply. Levels above those listed in the Absolute Ratings table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors may be used to reduce noise and improve power supply integrity. AC capacitors must be placed on the MainLink lines. Additionally, AC capacitors are placed on the AUXC lines. After the blocking capacitors, the AUXCp line must be pulled down weakly through a resistor to ground, and the AUXCn line must be pulled up weakly through a resistor to VDD. The voltage level of the control pins, AUX\_SEL and Dx\_SEL should be set according to the application and muxing desired. For a DisplayPort connector, the CONFIG1 and CONFIG2 pins should be pulled to ground through resistors. For Dual Mode adapter implementation, the CONFIG1 line may be used to perform cable adapter detection. The CONFIG2 line can be configured for an HDMI adaptor or left as a no connect for a DVI adapter. The CONFIG2 pin on the connector should be pulled up or left floating accordingly for Dual Mode adapter configuration.

## 9.2.2 HDMI Application with Two Sinks

The HD3SS215 can be placed in applications needing to switch between two sinks. In this example, the HDMI source selects between Sink A or Sink B in the 1:2 configuration.

Control for AUX\_SEL and Dx\_SEL. Setup to select Sink A shown.

Figure 9-4. Application Diagram for a 1:2 Configuration with HDMI Source and Connectors

# 9.2.2.1 Design Requirements

**Table 9-2. Design Parameters** 

	•
DESIGN PARAMETER	EXAMPLE VALUE
VDD	3.3 V
Decoupling Capacitors	0.1 μF
DDC Pull-Up Resistors	1.5 k $\Omega$ to 2 k $\Omega$ to 5 V (2 k $\Omega$ shown)
Pull-Up/Pull-Down Resistors for Control Pins	10 kΩ
HPD Pull-Down Resistor	100 kΩ

## 9.2.2.2 Detailed Design Procedure

The HD3SS215 is designed to operate with a 3.3 V power supply. Levels above those listed in the Absolute Ratings table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors may be used to reduce noise and improve power supply integrity. Pull-up resistors to 5 V must be placed on the source side DDC clock and data lines according to the HDMI2.0 Standard. A weak pull down resistor should be placed on the source side HPD line. This is to ensure the source

can differentiate between when HPD is disconnected or at a high voltage level. The AUX\_SEL and Dx\_SEL control pins should be set according to the application and desired muxing.

#### 9.2.3

### 9.2.4 HDMI 2:1 Sink Application Using the RTQ Package

The HD3SS215 can be placed in applications needing to switch between two HDMI connectors and one Generic HDMI sink.

AUX\_SEL and Dx\_SEL configured for A to C

Figure 9-5. HDMI 2:1 Sink Application Using the RTQ Package

### **Note**

According to the HDMI specification the DDC 2-k $\Omega$  pullup resistors can be replaced by 47-k $\Omega$  pullups. Figure 9-5 schematic and Figure 10-3 PCB layout example shows 47-k $\Omega$  pullup resistors.

# **Power Supply Recommendations**

The HD3SS215 is designed to operate with a 3.3-V power supply. Levels above those listed in the Absolute Ratings table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors must be used to reduce power supply noise.

## 10 Layout

## 10.1 Layout Guidelines

- The ESD and EMI protection devices (if used) should be placed as close as possible to the connector.
- Place voltage regulators as far away as possible from the high-speed differential pairs.
- It is recommended that small decoupling capacitors for the HD3SS215 power rail be placed close to the
  device.
- The high-speed differential signal traces should be routed on the top layer to avoid the use of vias and allow clean interconnects to the mux.
- The high speed differential signal traces should be routed parallel to each other as much as possible. It is recommended the traces be symmetrical.
- In order to control impedance for transmission lines, a solid ground plane should be placed next to the highspeed signal layer. This also provides an excellent low-inductance path for the return current flow.
- The power plane should be placed next to the ground plane to create additional high-frequency bypass capacitance.
- Adding test points will cause impedance discontinuity and will therefore negatively impact signal
  performance. If test points are used, they should be placed in series and symmetrically. They must not be
  placed in a manner that causes stubs on the differential pair.
- Avoid 90 degree turns in traces. The use of bends in differential traces should be kept to a minimum. When bends are used, the number of left and right bends should be as equal as possible and the angle of the bend should be ≥135 degrees. This will minimize any length mismatch caused by the bends and therefore minimize the impact bends have on EMI.

## 10.2 Layout Example

An example layout for the HD3SS215 shows the device implemented on a 4-layer board. The layout figures follow the DisplayPort application schematic above. The top layer layout view shows the signal routing for two sources and one sink. The bottom layer layout view shows the remaining signal routing and a copper pour implemented for the decoupling capacitors.

Figure 10-1. Top Layer Layout View

Figure 10-2. Bottom Layer Layout View

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

<sup>(4)</sup> Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

# **PACKAGE OPTION ADDENDUM**

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
