MAX4595 SINGLE-CHANNEL 10- Ω SPST ANALOG SWITCH

SLLS640 – JANUARY 2005

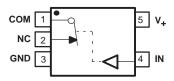

Description

The MAX4595 is a single-pole single-throw (SPST) analog switch that is designed to operate from 2 V to 5.5 V. This device can handle both digital and analog signals, and signals up to V_{+} can be transmitted in either direction.

Applications

- Sample-and-Hold Circuits
- Battery-Powered Equipment (Cellular Phones, PDAs)
- Audio and Video Signal Routing
- Communication Circuits
- PCMCIA Cards

SOT-23 OR SC-70 PACKAGE (TOP VIEW)

FUNCTION TABLE

IN	NC TO COM, COM TO NC
L	ON
Н	OFF

Features

- Low ON-State Resistance (10 Ω)
- ON-State Resistance Flatness (1.5 Ω)
- Control Inputs Are 5.5-V Tolerant
- Low Charge Injection (5 pC Max)
- 300-MHz –3-dB Bandwidth at 25°C
- Low Total Harmonic Distortion (THD) (0.05%)
- 2-V to 5.5-V Single-Supply Operation
- Specified at 5-V and 3.3-V Nodes
- -80-dB OFF Isolation at 1 MHz
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- 0.5-nA Max OFF Leakage
- ESD Performance Tested Per JESD 22
 - 2000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)
- TTL/CMOS-Logic Compatible

Summary of Characteristics

 $V_{+} = 5 \text{ V}, T_{A} = 25^{\circ}\text{C}$

Configuration	Single Pole Single Throw (SPST)
Number of channels	1
ON-state resistance (ron)	10 Ω
ON-state resistance flatness (ron(flat))	1.5 Ω
Turn-on/turn-off time (ton/toff)	35 ns/40 ns
Charge injection (Q _C)	5 pC
Bandwidth (BW)	300 MHz
OFF isolation (OISO)	-80 dB at 1 MHz
Total harmonic distortion (THD)	0.05%
Leakageourrent(ICOM(OFF)/INC(OFF))	±0.05 nA
Power-supply current (I+)	1 μΑ
Package option	5-pin SOT-23 or SC-70

ORDERING INFORMATION

TA	PACKAGE ⁽¹⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING ⁽²⁾
4000 1- 0500	SOT (SOT-23) – DBV	Tape and reel	MAX4595DBVR	6SB_
-40°C to 85°C	SOT (SC-70) - DCK	Tape and reel	MAX4595DCKR	SB_

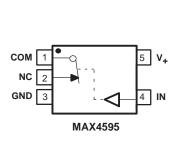

⁽¹⁾ Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package. (2) DBV/DCK: The actual top-side marking has one additional character that designates the assembly/test site.

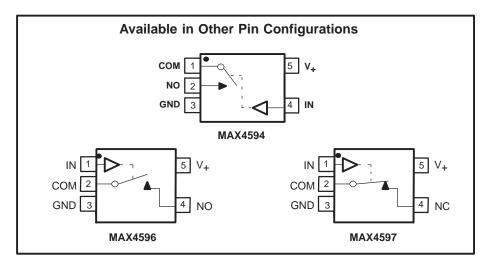

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Pin Configurations

Absolute Minimum and Maximum Ratings(1)(2)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V ₊	Supply voltage range(3)	-0.3	6	V	
V _{NC}	Analog voltage range(3)(4)		-0.3	V ₊ + 0.3	V
ΙK	Analog port diode current	V _{NC} , V _{COM} < 0	-50		mA
I _{NC}	On-state switch current	V_{NC} , $V_{COM} = 0$ to V_{+}	-20	20	mA
VI	Digital input voltage range(3)(4)		-0.3	6	V
lik	Digital input clamp current	V _I < 0	-50		mA
l ₊	Continuous current through V+			100	mA
IGND	Continuous current through GND		-100		mA
	5 (5)	DBV package		206	^ Q44 /
θJA	Package thermal impedance(5)	DCK package		252	°C/W
T _{stg}	Storage temperature range		-65	150	°C

⁽¹⁾ Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (5) The package thermal impedance is calculated in accordance with JESD 51-7.

PIN DESCRIPTION

PIN NUMBER	NAME	DESCRIPTION
1	COM	Common
2	NC	Normally closed
3	GND	Digital ground
4	IN	Digital control pin to connect COM to NC
5	V ₊	Power supply

PARAMETER DESCRIPTION

SYMBOL	DESCRIPTION
Vсом	Voltage at COM
V _{NC}	Voltage at NC
r _{on}	Resistance between COM and NC ports when the channel is ON
ron(flat)	Difference between the maximum and minimum value of ron in a channel over the specified range of conditions
INC(OFF)	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state
INC(ON)	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) open
ICOM(OFF)	Leakage current measured at the COM port, with the corresponding channel (COM to NC) in the OFF state
ICOM(ON)	Leakage current measured at the COM port, with the corresponding channel (COM to NC) in the ON state and the output (NC) open
VIH	Minimum input voltage for logic high for the control input (IN)
V _{IL}	Maximum input voltage for logic low for the control input (IN)
VI	Voltage at the control input (IN)
I _{IH} , I _{IL}	Leakage current measured at the control input (IN)
toN	Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NC) signal when the switch is turning ON.
tOFF	Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NC) signal when the switch is turning OFF.
QC	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$, C_L is the load capacitance, and ΔV_{COM} is the change in analog output voltage.
C _{NC(OFF)}	Capacitance at the NC port when the corresponding channel (NC to COM) is OFF
C _{NC(ON)}	Capacitance at the NC port when the corresponding channel (NC to COM) is ON
CCOM(OFF)	Capacitance at the COM port when the corresponding channel (COM to NC) is OFF
CCOM(ON)	Capacitance at the COM port when the corresponding channel (COM to NC) is ON
Cl	Capacitance of control input (IN)
O _{ISO}	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM) in the OFF state.
BW	Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB below the DC gain.
THD	Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of the fundamental harmonic.
l ₊	Static power-supply current with the control (IN) pin at V ₊ or GND

⁽¹⁾ Status: For more details on status, see our product life cycle.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

⁽²⁾ Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

⁽⁴⁾ Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.
