

SN74LV4052A Dual 4-Channel Analog Multiplexers and Demultiplexers

1 Features

- 1.65V to 5.5V V_{CC} operation
- Fast switching
- High on-off output-voltage ratio
- Low crosstalk between switches
- Extremely low input current
- Latch-up performance exceeds 100mA per JESD 78, class II
- ESD protection exceeds JESD 22:
 - $\pm 4000V$ human-body model (A114-A)
 - $\pm 2000V$ charged-device model (C101)

2 Applications

- [Telecommunications](#)
- [Infotainment](#)
- Signal gating and isolation
- [Home appliances](#)
- Programmable logic circuits
- Modulation and demodulation

3 Description

The SNx4LV4052A device is a dual, 4-channel CMOS analog multiplexer and demultiplexer that is designed for 1.65V to 5.5V V_{CC} operation.

The SNx4LV4052A device handles both analog and digital signals. Each channel permits signals with amplitudes up to 5.5V (peak) to be transmitted in either direction.

Package Information

PART NUMBER	PACKAGE ⁽¹⁾	PACKAGE SIZE ⁽²⁾
SNx4LV4052A	D (SOIC, 16)	9.9mm × 6mm
	PW (TSSOP, 16)	5mm × 6.4mm
	RGY (VQFN, 16)	4mm × 3.5mm
	DYY (SOT-23-THIN, 16)	4.2mm x 3.26mm

(1) For more information, see [Section 11](#).

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. Absolute maximum ratings do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If briefly operating outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not sustain damage, but it may not be fully functional. Operating the device in this manner may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) Pins are diode-clamped to the power-supply rails. Over voltage signals must be voltage and current limited to maximum ratings.
- (3) This value is limited to 5.5V maximum

(1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to TI application report *Implications of Slow or Floating CMOS Inputs*, SCBA004.

(2) When using a V_{CC} of ≤1.2V, it is recommended to use these devices only for transmitting digital signals. When supply voltage is near 1.2V the analog switch ON resistance becomes very non-linear

7 Detailed Description

7.1 Overview

The SNx4LV4052A device is a dual, 4-channel CMOS analog multiplexer and demultiplexer that is designed for 2V to 5.5V V_{CC} operation. It has low input current consumption at the digital input pins and low crosstalk between switches. The active low Inhibit (INH) tri-state all the channels when high and when low, depending on the A and B inputs, one of the four independent input/outputs (nY0 - nY3) connects to the COM channel. The SNx4LV4052A is available in multiple package options including TSSOP (PW), SOIC (D), DYY (SOT-23-THIN) and QFN (RGY).

Figure 7-1. Logic Diagram (Positive Logic)

7.3 Feature Description

- The SNx4LV4052A operates from 2V to 5.5V V_{CC} with extremely low input current consumption at the CMOS input pins of A, B and INH.
- The SNx4LV4052A enables fast switching with low crosstalk between the switches. 5.5V peak level bidirectional transmission allowed with the either analog or digital signals.

7.4 Device Functional Modes

Table 7-1 lists the functional modes of SNx4LV4052A.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

Typical applications for the SNx4LV4052A include signal gating, chopping, modulation or demodulation (modem), and signal multiplexing for analog-to-digital and digital-to-analog conversion systems.

8.2.1 Design Requirements

Designing with the SNx4LV4052A device requires a stable input voltage between 2V and 5.5V (see *Recommended Operating Conditions* for details). Another important design consideration are the characteristics of the signal being multiplexed—ensure no important information is lost due to timing or incompatibility with this device.

8.2.2 Detailed Design Procedure

The SNx4LV4052A dual 1- to 4-channel multiplexer is an excellent choice for I²C selection. The I²C data and clock lines are selected using A,B select lines from the MCU. The pullup resistors are selected based on the capability of the driver. Low pullup resistor results in faster rise time; however, it generates additional current during the low state into the driver. See the *Recommended Operating Conditions* for the input transition rates (V_{IH} and V_{IL}) of the CMOS inputs.

8.2.3 Application Curve

Figure 8-2. Maximum Propagation Delay vs V_{CC}

8.3 Power Supply Recommendations

Most systems have a common 3.3V or 5V rail that can supply the V_{CC} pin of this device. If this rail is not available, a switched-mode power supply (SMPS) or a low dropout regulator (LDO) can supply this device from a higher-voltage rail.

See the *Recommended Operating Conditions* for operating voltage range for this device. Having bypass capacitors of 0.1μF is highly recommended.

8.4 Layout

8.4.1 Layout Guidelines

TI recommends keeping the signal lines as short and as straight as possible (see Figure 8-3). Incorporation of microstrip or stripline techniques are also recommended when signal lines are more than 1 in. long. These traces must be designed with a characteristic impedance of either 50Ω or 75Ω as required by the application.

Do not place this device too close to high-voltage switching components because they may cause interference. Not all PCB traces can be straight and therefore some traces must turn corners. Figure 8-4 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision N (September 2024) to Revision O (July 2025)	Page
• Updated ESD protection to $\pm 4000\text{V}$ and $\pm 2000\text{V}$	1
• Updated ESD Ratings $\pm 4000\text{V}$ and $\pm 2000\text{V}$	4
• Updated CIS and COS ON.....	5

Changes from Revision M (September 2024) to Revision N (September 2024)	Page
• Added DYY package and size.....	1
• Added DYY package.....	3
• Updated CIS and COS ON.....	5

Changes from Revision L (June 2024) to Revision M (September 2024)	Page
• Updated ESD Ratings CDM from $\pm 1500\text{V}$ and $\pm 2000\text{V}$	4

Changes from Revision K (November 2016) to Revision L (June 2024)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Added new VIH and VIL Specifications at 1.65V Vcc.....	5
• Increased max ambient temperature max to 125C.....	5
• Added Ron, Ron Peak, and Delta Ron Specifications at 1.65V Vcc.....	5
• Added Ron, Ron Peak, and Delta Ron Specifications at 125C.....	5
• Updated CIS and COS ON.....	5
• Added Timing Specifications at 125C.....	7

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
