

**SN74LVC1G175** 

SCES560G -MARCH 2004-REVISED JUNE 2015

# SN74LVC1G175 Single D-Type Flip-Flop With Asynchronous Clear

#### **Features**

- Available in the Texas Instruments NanoFree™ Package
- Supports 5-V V<sub>CC</sub> Operation
- Inputs Accept Voltages to 5.5 V
- Supports Down Translation to V<sub>CC</sub>
- Max  $t_{pd}$  of 4.3 ns at 3.3 V
- Low Power Consumption, 10-µA Max I<sub>CC</sub>
- ±24-mA Output Drive at 3.3 V
- Ioff Supports Live Insertion, Partial-Power-Down Mode, and Back-Drive Protection
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

# 2 Applications

- TV/Set Top Box/Audio
- EPOS (Electronic Point-of-Sale)
- **Motor Drives**
- PC/Notebook
- Servers
- **Factory Automation and Control**
- Medical Healthcare and Fitness
- **Smart Grid**
- Telecom Infrastructure
- **Enterprise Switching**
- **Projectors**
- Storage

# 3 Description

This single D-type flip-flop is designed for 1.65-V to 5.5-V  $V_{CC}$  operation.

The SN74LVC1G175 device has an asynchronous clear (CLR) input. When CLR is high, data from the input pin (D) is transferred to the output pin (Q) on the clock's (CLK) rising edge. When CLR is low, Q is forced into the low state, regardless of the clock edge or data on D.

NanoFree™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using  $I_{\text{off}}$ . The  $I_{\text{off}}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

## Device Information<sup>(1)</sup>

| PART NUMBER     | PACKAGE    | BODY SIZE (NOM)   |  |  |
|-----------------|------------|-------------------|--|--|
| SN74LVC1G175DBV | SOT-23 (6) | 2.90 mm × 1.60 mm |  |  |
| SN74LVC1G175DCK | SC70 (6)   | 2.00 mm × 1.25 mm |  |  |
| SN74LVC1G175DRY | SON (6)    | 1.45 mm × 1.00 mm |  |  |
| SN74LVC1G175YZP | DSBGA (6)  | 1.41 mm × 0.91 mm |  |  |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

# 6 Specifications

## 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)

|                  |                             |   | MIN  | MAX                   | UNIT |  |
|------------------|-----------------------------|---|------|-----------------------|------|--|
| $V_{CC}$         | Supply voltage              | pply voltage  |      |                       |      |  |
| $V_{I}$          | Input voltage               |   | -0.5 | 6.5                   | V    |  |
| Vo               | Voltage applied to any outp | Voltage applied to any output in the high-impedance or power-off state <sup>(2)</sup> |      |                       |      |  |
| Vo               | Voltageapplied to any outp  | ut in the high or low state (2)(3)  | -0.5 | V <sub>CC</sub> + 0.5 | V    |  |
| I <sub>IK</sub>  | Input clamp current         | V <sub>1</sub> < 0  |      | -50                   | mA   |  |
| I <sub>OK</sub>  | Output clamp current        | V <sub>O</sub> < 0  |      | -50                   | mA   |  |
| Io               | Continuous output current   |   |      | ±50                   | mA   |  |
|                  | Continuous current through  | Continuous current through V <sub>CC</sub> or GND                                     |      |                       | mA   |  |
| T <sub>stg</sub> | Storage temperature         |   | -65  | 150                   | °C   |  |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

|                    |               |   | VALUE | UNIT |
|--------------------|---------------|---|-------|------|
| V                  | Electrostatic | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)              | 2000  | \/   |
| V <sub>(ESD)</sub> | discharge     | Charged-device model (CDM), per JEDEC specification JESD22-C101 (2) | 1000  | ٧    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

# 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)(1)

|                 |                           |  | MIN                    | MAX                  | UNIT |
|-----------------|---------------------------|--|------------------------|----------------------|------|
| V               | Supply voltage            | Supply valters Operating                     |                        | 5.5                  | V    |
| V <sub>CC</sub> | Supply voltage            | Data retention only                          | 1.5                    |                      | V    |
|                 |                           | $V_{CC} = 1.65 \text{ V to } 1.95 \text{ V}$ | 0.65 × V <sub>CC</sub> |                      |      |
| V               | High lovel input voltage  | $V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$   | 1.7                    |                      | V    |

|                 |                           | $V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$   | 0.7 × V <sub>CC</sub>  |                      |      |
|                 |                           | $V_{CC} = 1.65 \text{ V to } 1.95 \text{ V}$ |                        | $0.35 \times V_{CC}$ |      |
| V               | Low-level input voltage   | $V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$   |                        | 0.7                  | V    |
| V <sub>IL</sub> |                           | $V_{CC} = 3 \text{ V to } 3.6 \text{ V}$     |                        | 0.8                  | V    |
|                 |                           | $V_{CC} = 4.5 \text{ V to } 5.5 \text{ V}$   |                        | $0.3 \times V_{CC}$  |      |
| $V_{I}$         | Input voltage             |  | 0                      | 5.5                  | V    |
| Vo              | Output voltage            |  | 0                      | $V_{CC}$             | V    |
|                 |                           | V <sub>CC</sub> = 1.65 V                     |                        | -4                   |      |
|                 |                           | V <sub>CC</sub> = 2.3 V                      |                        | -8                   |      |
| I <sub>OH</sub> | High-level output current | V 2.V  |                        | -16                  | mA   |
|                 |                           | V <sub>CC</sub> = 3 V                        |                        | -24                  |      |
|                 |                           | V <sub>CC</sub> = 4.5 V                      |                        | -32                  |      |

<sup>(2)</sup> The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>(3)</sup> The value of V<sub>CC</sub> is provided in the *Recommended Operating Conditions* table.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, SCBA004.

# 8 Detailed Description

#### 8.1 Overview

This single D-type flip-flop is designed for 1.65-V to 5.5-V  $V_{CC}$  operation.

The SN74LVC1G175 device has an asynchronous clear ( $\overline{\text{CLR}}$ ) input. When  $\overline{\text{CLR}}$  is high, data from the input pin (D) is transferred to the output pin (Q) on the clock's (CLK) rising edge. When  $\overline{\text{CLR}}$  is low, Q is forced into the low state, regardless of the clock edge or data on D.

NanoFree<sup>™</sup> package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using I<sub>off</sub>. The I<sub>off</sub> circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

## 8.2 Functional Block Diagram

## 8.3 Feature Description

The SN74LVC1G175 device has a wide operating  $V_{CC}$  range of 1.65 V to 5.5 V, which allows it to be used in a broad range of systems. The 5.5-V I/Os allow down translation and also allow voltages at the inputs when  $V_{CC} = 0$ .

### 8.4 Device Functional Modes

Table 1 lists the functional modes for SN74LVC1G175.

**Table 1. Function Table** 

|     | INPUTS | OUTPUT |       |
|-----|--------|--------|-------|
| CLR | CLK    | D      | Q     |
| Н   | 1      | L      | L     |
| Н   | 1      | Н      | Н     |
| Н   | H or L | Х      | $Q_0$ |
| L   | Х      | Х      | L     |

# 9 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

# 9.1 Application Information

Multiple SN74LVC1G175 devices can be used in tandem to create a shift register of arbitrary length. In this example, we use four SN74LVC1G175 devices to form a 4-bit serial shift register. By connecting all CLK inputs to a common clock pulse and tying each output of one device to the next, we can store and load 4-bit values on demand. We demonstrate loading the 4 bit value 1101 into memory by setting Serial Input Data to each desired memory bit, and by sending a clock pulse for each bit, we sequentially move all stored bits from left to right  $(A \rightarrow B \rightarrow C \rightarrow D)$ 

## 9.2 Typical Application

Figure 4. 4-Bit Serial Shift Register

Stored B **Serial Input Data** Stored A Stored C Stored D 0 0 0 0 1 0 1 0 0 0 1 0 1 0 0 1 1 0 1 0 0 1 1 0 1

**Table 2. Stored Data Values** 

### 9.2.1 Design Requirements

The SN74LVC1G175 device uses CMOS technology and has balanced output drive. Care must be taken to avoid bus contention because it can drive currents that would exceed maximum limits.

The SN74LVC1G175 allows storing digital signals with a digital control signal. All input signals should remain as close as possible to either 0 V or  $V_{CC}$  for optimal operation.

#### 9.2.2 Detailed Design Procedure

- 1. Recommended input conditions:
  - For rise time and fall time specifications, see  $\Delta t/\Delta v$  in the table.
  - For specified high and low levels, see  $V_{IH}$  and  $V_{IL}$  in the table.
  - Inputs and outputs are overvoltage tolerant and can therefore go as high as 5.5 V at any valid V<sub>CC</sub>.
- 2. Recommended output conditions:
  - Load currents should not exceed ±50 mA.

- 3. Frequency selection criterion:
  - The effects of frequency upon the output current should be studied in Figure 5.
  - Added trace resistance and capacitance can reduce maximum frequency capability; follow the layout practices listed in the *Layout* section.

#### 9.2.3 Application Curve

Figure 5. Max tpd vs Voltage of LVC Family

# 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating listed in the table.

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu$ F bypass capacitor is recommended. If multiple pins are labeled  $V_{CC}$ , then a 0.01- $\mu$ F or 0.022- $\mu$ F capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins are tied together internally. For devices with dual supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1- $\mu$ F bypass capacitor is recommended for each supply pin. To reject different frequencies of noise, use multiple bypass capacitors in parallel. Capacitors with values of 0.1  $\mu$ F and 1  $\mu$ F are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

### 11 Layout

### 11.1 Layout Guidelines

When using multiple-bit logic devices, inputs must never float.

In many cases, functions (or parts of functions) of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or when only 3 of the 4 buffer gates are used. Such input pins must not be left unconnected, because the undefined voltages at the outside connections result in undefined operational states. Figure 6 specifies the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally they are tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. It is generally acceptable to float outputs, unless the part is a transceiver. If the transceiver has an output enable pin, it disables the output section of the part when asserted, which does not disable the input section of the I/Os. Therefore, the I/Os cannot float when disabled.

<sup>(1)</sup> Status: For more details on status, see our product life cycle.

<sup>(2)</sup> Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

# PACKAGE OPTION ADDENDUM

www.ti.com 7-Oct-2025

- (3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.
- (4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
- (5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.
- (6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

- 4. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
- 5. Refernce JEDEC MO-178.

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

DIE SIZE BALL GRID ARRAY

#### NOTES:

NanoFree Is a trademark of Texas Instruments.

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.
- 3. NanoFree<sup>™</sup> package configuration.

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints.
 For more information, see Texas Instruments literature number SBVA017 (www.ti.com/lit/sbva017).

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

5. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

#### NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.

  4. Falls within JEDEC MO-203 variation AB.

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.

6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

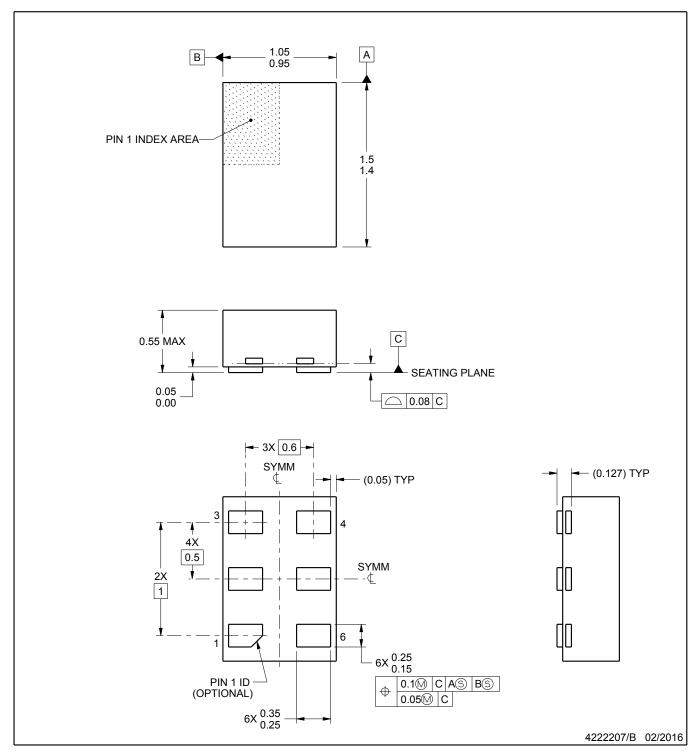

Images above are just a representation of the package family, actual package may vary. Refer to the product data sheet for package details.

PLASTIC SMALL OUTLINE - NO LEAD

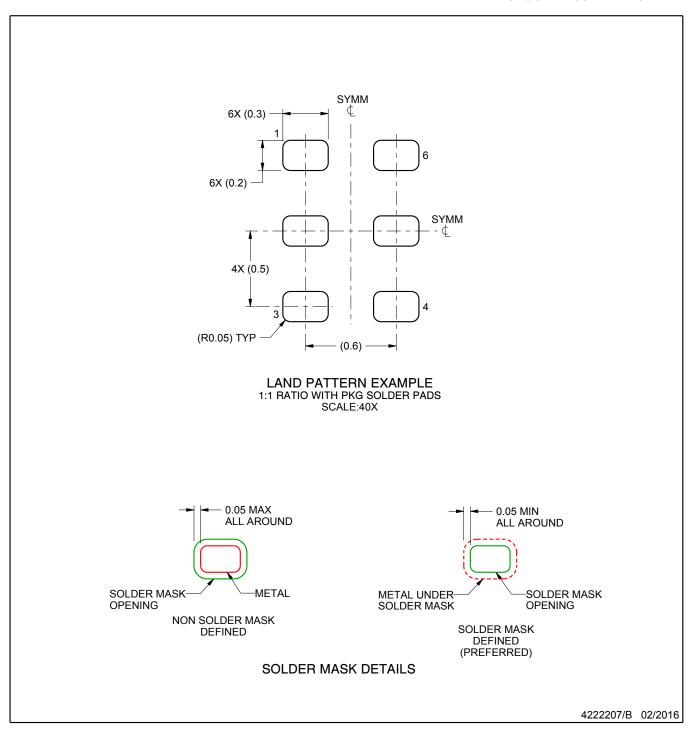

#### NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

PLASTIC SMALL OUTLINE - NO LEAD

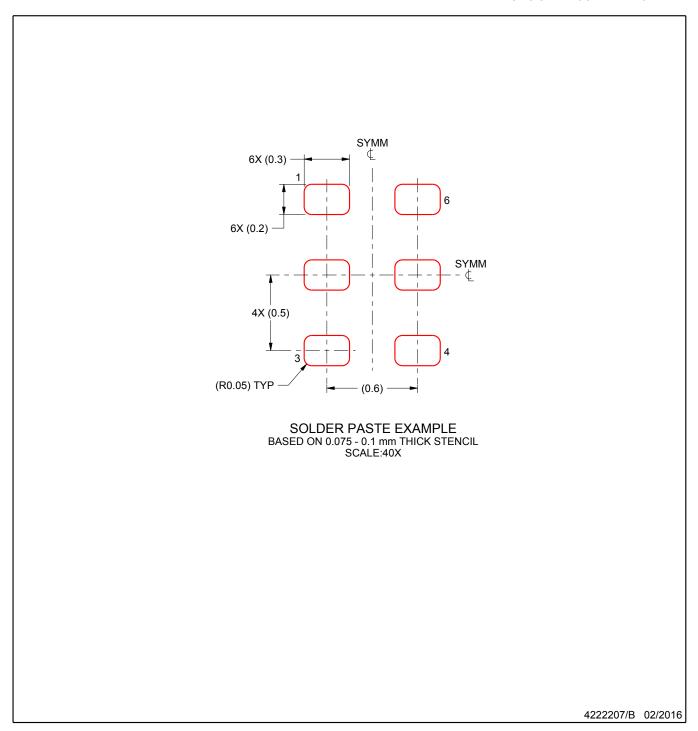

NOTES: (continued)

3. For more information, see QFN/SON PCB application report in literature No. SLUA271 (www.ti.com/lit/slua271).

PLASTIC SMALL OUTLINE - NO LEAD

NOTES: (continued)

Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
