Excalibur Low-Noise High-Speed Precision Operational Amplifiers

1 Features

- Low noise
  - 10Hz . . . 15nV/√Hz
  - 1kHz . . . 10.5nV/√Hz
- Load capability: 10000pF
- Short-circuit output current: 20mA (minimum)
- Slew rate: 27V/µs (minimum)
- High gain-bandwidth product: 5.9MHz
- Low V_{IO}: 500µV maximum at 25°C
- Single or split supply: 4V to 44V
- Fast settling time:
  - 340ns to 0.1%
  - 400ns to 0.01%
- Saturation recovery: 150ns
- Large output swing:
  - V_{CC-} + 0.1V to V_{CC+} − 1V

2 Applications

- EV charging infrastructure
- Industrial AC-DC
- Fire alarm control panel (FACP)
- String inverter

3 Description

The TLE214x and TLE214xA devices are high-performance, internally compensated operational amplifiers built using Texas Instruments complementary bipolar Excalibur process. The TLE214xA is a tighter offset voltage grade of the TLE214x. Both are pin-compatible upgrades to standard industry products.

The design incorporates an input stage that simultaneously achieves low audio-band noise of 10.5nV/√Hz with a 10Hz 1/f corner and symmetrical 40V/µs slew rate typically with loads up to 800pF. The resulting low distortion and high power bandwidth are important in high-fidelity audio applications. A fast settling time of 430ns to 0.1% of a 10V step with a 2kΩ/100pF load is useful in fast actuator/positioning drivers. Under similar test conditions, settling time to 0.01% is 640ns.

Both versions can also be used as comparators. Differential inputs of $V_{CC\pm}$ can be maintained without damage to the device. Open-loop propagation delay with TTL supply levels is typically 200ns. This gives a good indication as to output stage saturation recovery when the device is driven beyond the limits of recommended output swing.

Both the TLE214x and TLE214xA are available in a wide variety of packages, including both the industry-standard 8-pin small-outline version and chip form for high-density system applications. The C-suffix devices are characterized for operation from 0°C to 70°C, I-suffix devices from −40°C to 105°C, and M-suffix devices over the full military temperature range of −55°C to 125°C.

Package Information

PART NUMBER	PACKAGE(1)	PACKAGE SIZE(2)
TLE2141, TLE2141A	P (PDIP, 8)	9.81mm × 9.43mm
	D (SOIC, 8)	4.9mm × 6mm
TLE2142	P (PDIP, 8)	9.81mm × 9.43mm
	D (SOIC, 8)	4.9mm × 6mm
	PW (TSSOP, 16)	5mm × 6.4mm
TLE2142A	D (SOIC, 8)	4.9mm × 6mm
TLE2142AM	JG (CDIP, 8)	9.6mm × 6.67mm
	U (CFP, 10)	21.44mm × 6.5mm
	FK (LCCC, 20)	8.89mm × 8.89mm
TLE2142AM-D	D (SOIC, 8)	4.9mm × 6mm
TLE2142M	JG (CDIP, 8)	9.6mm × 6.67mm
	U (CFP, 10)	21.44mm × 6.5mm
	FK (LCCC, 20)	8.89mm × 8.89mm
TLE2142M-D	D (SOIC, 8)	4.9mm × 6mm
TLE2144	N (PDIP, 14)	19.3mm × 9.4mm
	DW (SOIC, 16)	10.3mm × 10.3mm
TLE2144A	N (PDIP, 14)	19.3mm × 9.4mm
TLE2144AM, TLE2144M	J (CDIP, 14)	19.56mm × 6.67mm
	FK (LCCC, 20)	8.89mm × 8.89mm
TLE2144M-D	DW (SOIC, 16)	10.3mm × 10.3mm

(1) For all available packages, see Section 9.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			VALUE	UNIT
V_{CC+}	Supply voltage(2)		22	V
V_{CC-}	Supply voltage		–22	V
V_{ID}	Differential input voltage(3)		±44	V
V_I	Input voltage range, (any input)		V_{CC+} to V_{CC-} −0.3	V
I_I	Input current (each input)		± 1	mA
I_O	Output current		± 80	mA
	Total current into V_{CC+}		80	mA
	Total current out of V_{CC-}		80	mA
	Duration of short-circuit current at (or below) 25°C(4)		Unlimited	
θ_{JA}	Package thermal impedance(5) (6)	D package	97.1	°C/W
		DW package	57.3	
		N package	79.7	
		P package	84.6	
		PW package	108.4	
θ_{JC}	Package thermal impedance(5) (6)	FK package	5.6	°C/W
		J package	15.1	
		JG package	14.5	
		U package	14.7	
T_A	Operating free-air temperature range	C suffix	0 to 70	°C
		I suffix	–40 TO 105	°C
		M suffix	–55 TO 125	°C
	Storage temperature range		–65 TO 150	°C
	Case temperature for 60 seconds: FK package		260	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds: D, DW, N, P, or PW package		260	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: J or JG package		300	°C

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential voltages, are with respect to the midpoint between V_{CC+} and V_{CC-} .
(3) Differential voltages are at IN+ with respect to IN−. Excessive current flows, if input, are brought below V_{CC-} −0.3V .
(4) The output may be shorted to either supply. Temperature and /or supply voltages must be limited to make sure that the maximum dissipation rating is not exceeded.
(5) Maximum power dissipation is a function of $T_J(max)$, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(max) - T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.
(6) The package thermal impedance is calculated in accordance with JESD 51-7 (plastic) or MIL-STD-883 Method 1012 (ceramic).

5.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			C SUFFIX		I SUFFIX		M SUFFIX		UNIT
			MIN	MAX	MIN	MAX	MIN	MAX

6 Detailed Description

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

6.1 Overview

The TLE214x amplifiers are stable with capacitive loads up to 10nF, although the 6MHz bandwidth decreases to 1.8MHz at this high loading level. As such, these devices are useful for low-droop sample-and-holds and direct buffering of long cables, including 4mA to 20mA current loops.

The special design also exhibits an improved insensitivity to inherent integrated circuit component mismatches as is evidenced by a 500µV maximum offset voltage and 1.7µV/°C typical drift. Minimum common-mode rejection ratio and supply-voltage rejection ratio are 85dB and 90dB, respectively.

Device performance is relatively independent of supply voltage over the ±2V to ±22V range. Inputs can operate between V_{CC-} − 0.3V to V_{CC+} − 1.8V without inducing phase reversal, although excessive input current can flow out of each input exceeding the lower common-mode input range. The all-npn output stage provides a nearly rail-to-rail output swing of V_{CC-} − 0.1V to V_{CC+} − 1V under light current-loading conditions. The device can sustain shorts to either supply since output current is internally limited, but care must be taken to make sure that maximum package power dissipation is not exceeded.

7 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

7.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

7.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

7.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

7.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

7.5 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

8 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (October 2012) to Revision E (July 2025)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document	1
• Changed pins 1 and 5 from OFFSET N1 to NC and OFFSET N2 to NC for TLE2141 D, JG, and P package pinouts	3
• Changed typical settling time specification across all devices from 0.34µs (0.1%, ±15V V_S) to 0.43µs, 0.4µs (0.01%, ±15V V_S) to 0.64µs, 0.16µs (0.1%, 5V V_S) to 0.66µs, and 0.22µs (0.01%, 5V V_S) to 0.99µs	4
• Changed typical THD+N specification at ±15V V_S across all devices from 0.01% to 0.06%	4
• Changed typical maximum output bandwidth specification at 5V V_S across all devices from 660kHz to 380kHz	4

9 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF TLE2141, TLE2141A, TLE2142, TLE2142A, TLE2142AM, TLE2142M, TLE2144, TLE2144A, TLE2144AM, TLE2144M :

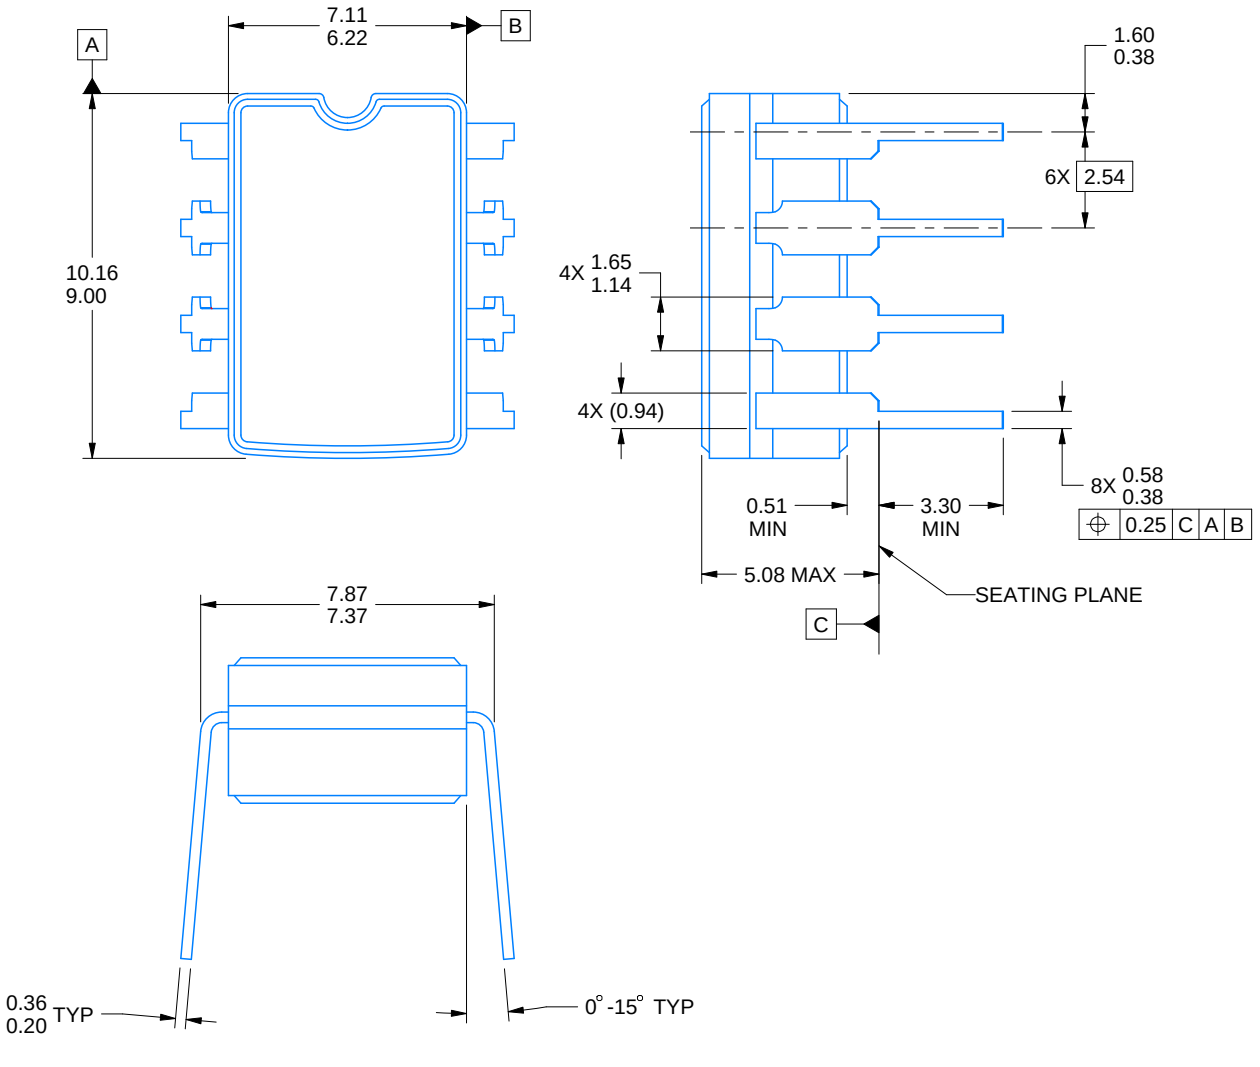
PACKAGE OUTLINE

JG0008A

CDIP - 5.08 mm max height

CERAMIC DUAL IN-LINE PACKAGE



4230036/A 09/2023

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8
