

TS5A22362 0.65-Ω 2-channel SPDT Analog Switches With Negative Signaling Capability

1 Features

- Specified break-before-make switching
- Negative signaling capability: maximum swing from -2.75 V to 2.75 V ($V_{CC} = 2.75\text{ V}$)
- Low ON-state resistance ($0.65\text{ }\Omega$ typical)
- Low charge injection
- Excellent ON-state resistance matching
- 2.3-V to 5.5-V Power supply (V_{CC})
- Latch-Up performance exceeds 100 mA Per JESD 78, Class II
- ESD Performance tested per JESD 22
 - 2500-V Human-body model (A114-B, class II)
 - 1500-V Charged-device model (C101)
 - 200-V Machine model (A115-A)

2 Applications

- Cell phones
- Personal digital assistant (PDAs)
- Portable instrumentation
- Audio routing
- Medical imaging

3 Description

The TS5A22362 is a bidirectional, 2-channel single-pole double-throw (SPDT) analog switch designed to operate from 2.3 V to 5.5 V. The device features negative signal swing capability that allows signals below ground to pass through the switch without distortion. The break-before-make feature prevents signal distortion during the transferring of a signal from one path to another. Low ON-state resistance, excellent channel-to-channel ON-state resistance matching, and minimal total harmonic distortion (THD) performance are ideal for audio applications. The 3.00 mm × 3.00 mm DRC package is also available as a nonmagnetic package for medical imaging application.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS5A22362	VSON (10)	3.00 mm × 3.00 mm
	DSBGA (10)	1.86 mm × 1.36 mm
	VSSOP (10)	3.00 mm × 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Pin Functions

PIN				TYPE	DESCRIPTION
NAME	VSON	VSSOP	DSBGA		
VCC	1	1	A2	—	Power Supply
NO1	2	2	A3	I/O	Normally Open (NO) signal path, Switch 1
COM1	3	3	B3	I/O	Common signal path, Switch 1
NC1	4	4	C3	I/O	Normally Closed (NC) signal path, Switch 1
IN1	5	5	D3	I	Digital control pin , Switch 1
GND	6	6	D2	—	Ground
IN2	7	7	D1	I	Digital control pin, Switch 2
NC2	8	8	C1	I/O	Normally Closed (NC) signal path, Switch 2
COM2	9	9	B1	I/O	Common signal path, Switch 2
NO2	10	10	A1	I/O	Normally Open (NO) signal Path, Switch 2

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
V_{CC} ⁽²⁾	Supply voltage ⁽³⁾	–0.5	6	V
V_{NC} V_{NO} V_{COM}	Analog voltage ⁽³⁾ ⁽⁴⁾ ⁽⁵⁾	$V_{CC} - 6$	$V_{CC} + 0.5$	V
$I_{I/OK}$	Analog port diode current $V_{NC}, V_{NO}, V_{COM} < 0$ or $V_{NC}, V_{NO}, V_{COM} > V_{CC}$	–50	50	mA
I_{NC} I_{NO} I_{COM}	ON-state switch current ON-state peak switch current ⁽⁶⁾	–150 –300	150 300	mA
I_{NC} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾ I_{NO} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾ I_{COM} ⁽³⁾ ⁽⁷⁾ ⁽⁸⁾	ON-state switch current ON-state peak switch current ⁽⁶⁾	–350 –500	350 500	mA
V_I	Digital input voltage	–0.5	6.5	V
I_{IK}	Digital input clamp current ⁽³⁾ ⁽⁴⁾ $V_I < 0$	–50	50	mA
I_{CC} I_{GND}	Continuous current through V_{CC} or GND	–100	100	mA
T_{stg}	Storage temperature	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum
- (3) All voltages are with respect to ground, unless otherwise specified.
- (4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (5) This value is limited to 5.5 V maximum.
- (6) Pulse at 1-ms duration < 10% duty cycle.
- (7) $V_{CC} = 3.0$ V to 5.0 V, $T_A = -40^{\circ}\text{C}$ to 85°C .
- (8) For YZP package only.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	2.3	5.5	V
V_{NC} V_{NO} V_{COM}	Signal path voltage	$V_{CC} - 5.5$	V_{CC}	V
V_{IN}	Digital control	GND	5.5	V

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TS5A22362			UNIT
		DGS (VSSOP)	DRC (VSON)	YZP (DSBGA)

8 Detailed Description

8.1 Overview

The TS5A22362 is a bidirectional, 2-channel single-pole double-throw (SPDT) analog switches designed to operate from 2.3 V to 5.5 V. The devices feature negative signal capability that allows signals below ground to pass through the switch without distortion. The break-before-make feature prevents signal distortion during the transferring of a signal from one path to another. Low ON-state resistance, excellent channel-to-channel ON-state resistance matching, and minimal total harmonic distortion (THD) performance are ideal for audio applications.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Negative Signaling Capacity

The TS5A22362 dual SPDT switches feature negative signal capability that allows signals below ground to pass through without distortion. These analog switches operate from a single +2.3-V to +5.5-V supply. The input and output signal swing of the device is dependant of the supply voltage V_{CC} : the devices pass signals as high as V_{CC} and as low as $V_{CC} - 5.5$ V, including signals below ground with minimal distortion.

Table 1 shows the input/output signal swing the user can get with different supply voltages.

Table 1. Input/Output signal swing

SUPPLY VOLTAGE, V_{CC}	MINIMUM (V_{NC} , V_{NO} , V_{COM}) = $V_{CC} - 5.5$	MAXIMUM (V_{NC} , V_{NO} , V_{COM}) = V_{CC}
5.5 V	0 V	5.5 V
4.5 V	–1.9 V	4.5 V
3.6 V	–2.5 V	3.6 V
3.0 V	–2.5 V	3.0 V
2.7 V	–2.8 V	2.7 V
2.3 V	–3.2 V	2.3 V

8.4 Device Functional Modes

The function table for TS5A22362 is shown in Table 2

Table 2. Function Table

IN	NC TO COM, COM TO NC	NO TO COM, COM TO NO
L	ON	OFF
H	OFF	ON

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Ensure that the device is powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO.

Tie the digitally controlled inputs select pins IN1 and IN2 to V_{CC} or GND to avoid unwanted switch states that could result if the logic control pins are left floating.

All unused digital inputs of the device must be held at VCC or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

9.2 Typical Application

Figure 24. Typical Application

9.2.1 Design Requirements

Tie the digitally controlled inputs select pins IN1 and IN2 to V_{CC} or GND to avoid unwanted switch states that could result if the logic control pins are left floating.

9.2.2 Detailed Design Procedure

Select the appropriate supply voltage to cover the entire voltage swing of the signal passing through the switch because the TS5A22362 operates from a single +2.3-V to +5.5-V supply and the input/output signal swing of the device is dependant of the supply voltage V_{CC}. The device will pass signals as high as V_{CC} and as low as V_{CC} – 5.5 V. Use table 2 as a guide for selecting supply voltage based on the signal passing through the switch.

Ensure that the device is powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO.

Typical Application (continued)

9.2.3 Application Curve

Figure 25. R_{on} vs V_{COM}

10 Power Supply Recommendations

The TS5A22362 operates from a single 2.3-V to 5.5-V supply. The device must be powered up with a supply voltage on VCC before a voltage can be applied to the signal paths NC and NO. It is recommended to include a 100- μ s delay after VCC is at voltage before applying a signal on NC and NO paths

It is also good practice to place a 0.1- μ F bypass capacitor on the supply pin VCC to GND to smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

TI recommends placing a bypass capacitor as close to the supply pin VCC as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

Minimize trace lengths and vias on the signal paths in order to preserve signal integrity.

11.2 Layout Example

Figure 26. Layout example of TS5A22362

12 Device and Documentation Support

12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.2 Community Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

12.3 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.5 Glossary

[SLYZ022](#) — TI Glossary.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
